CONSULTING MINING ENGINEERS

610-890 WEST PENDER STREET

VANCOUVER 1, B.C.

OFFICE PHONE:
683-5861

RESIDENTIAL PHONE:
L. J. MANNING - 985-5690

INTRODUCTION:

The following report is based on results of a geochemical soil sampling programme conducted on the B.B. claims, between July 2nd and August 17th, 1969, under the supervision of S. S. Tan, Geologist.

PROPERTY:

The property consists of 64 contiguous mineral claims in the Kamloops Mining Division. Tower Mines Ltd. (N.P.L.), by Bill of Sale from E. E. North, is the recorded owner of the claims.

<u>Claim Name</u>	<u>No. of Claims</u>	<u>Record Number</u>	<u>Expiry Date</u>
B.B. 1-64	64	76821-76884	March 5, 1970

LOCATION AND ACCESS:

Approximate Co-ordinates: Longitude 120°44'W
(Center of Property) Latitude 50°30'N

Ref. N.T.S. Sheet 92 1/SE, Merritt, B. C.

The property lies to the north of Meadow Creek in the Kamloops Mining Division. The south property boundary is adjacent to the Mammit Lake--Kamloops all-weather gravel road. Kamloops and Mammit Lake are 28 miles and 12 miles respectively by road from the property.

TOPOGRAPHY AND VEGETATION:

Elevation ranges from 3,900 feet a.m.s.l. to 4,800 feet a.m.s.l. The terrain is undulating, but is interrupted by ridges having positive local relief of up to 200 feet. Southerly flowing tributaries of Meadow Creek drain the area.

Spruce, Jackpine and meadows are scattered over the property.

GENERAL GEOLOGY:

G.S.C. map 886A indicates Triassic Nicola Volcanic rocks underlie the property. Outcrops examined are all andesitic and basaltic lava flows. The only copper showing occurs in basalt flow top and consists of chalcocite dissemination and stringers.

SURVEY CONTROL:

An east-west brunton compass surveyed and chained base line was established along the center of the property. Cut and flagged north-south lines were turned off at 400 foot spacing. Local topographic features, creeks, lakes, etc., the main road, and claim posts were tied into the grid. Twelve claims on the north-west side of the property were not covered by the grid.

SOIL SAMPLING PROCEDURE:

Soil samples were taken on a line grid basis. Samples were taken at 400 foot picket stations on grid lines except in the vicinity of the showing where 200-foot stations were used (see map). A shovel was used to reach the "B" horizon. This horizon varies from poorly to well developed and is from 2 inches to 6 inches thick. 30 - 40 grams of the "B" horizon soil was placed in a standard 4" x 9" soil sample envelope. Drainage, slope, swamp, etc. were marked on the envelope of each corresponding sample location and later transferred to record sheets.

Samples were partially air-dried and shipped to Bondar-Clegg & Company, Geochemist, North Vancouver, for analysis.

SAMPLE PREPARATION AND LABORATORY ANALYSIS:

Bondar-Clegg treated the samples as follows:

- Drying
- Visual determination of soil type and organic content
- Sieve to -80 mesh fraction
- Hot extraction by Aqua Regia (HNO_3HCl)
- Atomic absorption analysis for copper in parts per million.

RESULTS AND INTERPRETATION:

A total of 706 soil samples were taken in the survey. Calculated threshold value is 80 ppm Cu, which is double the median. Values in excess of 80 ppm are considered to be probably anomalous. Laboratory determination of organic content of samples eliminates the spurious anomalies resulting from incorrect sampling of the "A" soil horizon. Several zones of copper anomalies are indicated by the survey (see map).

CONCLUSIONS:

The soil anomaly over the copper showing is localized and of limited areal extent. However, three other larger anomalies of the same order of copper concentration in soil, i.e. greater than 100 ppm are present in the area, viz:

- (i) Centered at 16 + 00W, 24 + 00S, trending northeasterly for 2,500 feet.
- (ii) Between Line 0 + 00 and Line 4 + 00W at 16 + 00N, trending east-west.
- (iii) At the north end of lines 40 + 00W and 44 + 00N.

All three anomalies could reflect underlying mineralization of a similar type as that encountered in the showing. The north-south linear anomalies at the south end of Line 12 + 00W and north of the beginning of Line 60 + 00W are also noteworthy.

Respectfully submitted,

L. J. MANNING & ASSOCIATES LTD.

S. S. Tan
S. S. Tan, B.Sc., E.I.T.

CERTIFICATE

I, Siau S. Tan, residing at 310 - 1965 West 8th Avenue, in the City of Vancouver, Province of British Columbia, hereby certify that:

1. I am employed as a geologist by L. J. Manning and Associates Ltd., with offices at 610 - 890 West Pender Street, Vancouver, B. C.
2. I am a graduate of Carleton University, Ottawa, Ontario, B.Sc. (Geology) in 1964, and have practiced my profession since that time.
3. I have successfully completed, by examination, the academic requirements for admission to membership of the Association of Professional Engineers of British Columbia, and am presently enrolled as an Engineer-in-Training.
4. I have no interest, direct or indirect, in the properties or securities of Tower Mines Ltd. (N.P.L.) or any of its affiliates, nor do I expect to receive any such interest.
5. that the report on the B.B. Claims of Tower Mines Ltd. is based on results of a geochemical soil sampling program conducted on these claims between July 2nd and August 17th, 1969 under my supervision.

DATED at Vancouver, British Columbia this 16th day of February 1970.

S. S. Tan

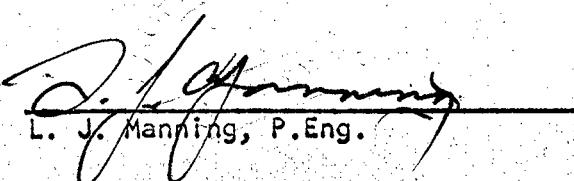

S. S. Tan, B.Sc., E.I.T.

CERTIFICATE OF QUALIFICATIONS

I, Luard J. Manning, P.Eng., Mining, of 945 Belvedere Drive, North Vancouver, B. C. certify as follows:

1. That I am a graduate of the University of British Columbia and hold a Bachelor of Applied Science degree in Mining Engineering.
2. That I have been a member of the Association of Professional Engineers of Ontario since 1959 and a member of the Association of Professional Engineers of British Columbia since April, 1966.
3. That I have been engaged in the profession of mining engineering for over 15 years.
4. That I was a member of the engineering and supervisory staff of the Taxco Unit of the American Smelting and Refining Co. Ltd. from 1951 to 1953.
5. That in 1953 I joined the staff as chief engineer of Giant Mascot Mines Ltd., Spillimacheen, B. C. and remained there until 1955.
6. That from 1955 to 1957 I was employed by Rix Athabasca Uranium Mines Ltd. as chief engineer and assistant manager.
7. That from 1957 to 1965 I was employed at the Pronto Division of Rio Algom Mines Ltd. in various capacities at both the uranium mine and the copper mine.
8. That from August to December 1965 I was Resident Manager at Orecan Mines Ltd.
9. That from January 1966 I have been involved in general exploration and consulting work.
10. That I am, at present, the principal in the firm of L. J. Manning & Associates Ltd. of Vancouver, a firm of consulting mining engineers.
11. That I concur with the conclusions of the report by S. S. Tan, Geologist of this firm on the B. B. Claims of Tower Mines Ltd., the basis of which is the results of a geochemical soil sampling program done under his supervision between July 2nd and August 17th, 1969.
12. That I do not hold any financial or other interest in the properties or stock of Tower Mines Ltd. (N.P.L.) or any of its affiliates nor do I expect to do so in the future.

Dated at Vancouver, B. C. this 16th day of February , 1970.

L. J. Manning, P.Eng.
