To Wit:

In the Matter of

Wages and costs incurred in a detailed geochemical survey of the "O" claims, Babine Lake Area, Omineca M.D., B.C.

I, Gerald A. Noel

, of

Vancouver

in the Province of British Columbia.

Do Solemnly Declare that the following wages and costs were directly expended on a detailed geochemical survey of the "O" claims between June 28, 1969 and June 28, 1970:

Wages:

| | | | | |
|--------------|---------|-------------------------|-----------------|-------------------|
| E.H. Ewer | 15 days | April 29 - May 15, 1970 | @ \$1,000/month | \$ 500.00 |
| P. Verner | 15 days | April 29 - May 15, 1970 | @ \$ 850/month | \$ 425.00 |
| H. Derickson | 15 days | April 29 - May 15, 1970 | @ \$ 700/month | \$3 350.00 |
| R. Wellwood | 15 days | April 29 - May 15, 1970 | @ \$ 575/month | <u>\$ 287.50</u> |
| | | | | <u>\$1,562.50</u> |

| | | |
|--|-----------------|--------------------|
| Total wages | \$ 1,562.50 | |
| Helicopter Servicing | 800.00 | |
| Camp costs (Wood and supplies) | 300.00 | |
| Geochemical Analyses (Cu, Pb, Zn, Mo) | | |
| 464 S/s @ \$2.50 | <u>1,160.00</u> | |
| | | <u>\$ 3,822.50</u> |

And I make this solemn Declaration conscientiously believing it to be true, and knowing that it is of the same force and effect as if made under oath, and by virtue of the Canada Evidence Act.

Declared before me

at VANCOUVER, B.C.

in the Province of British Columbia.

this JUN 12 1970 day of

Sub-Mining Recorder D. 19

ASSESSMENT REPORT

NO. 2457 MAP

SUMMARY

A geochemical soil survey was conducted over the seven "O" Claims held by El Paso Mining and Milling Company from April 29 to May 15, 1970. These claims are about six miles west of Topley Landing on Babine Lake. The claims are underlain by volcanics and pyroclastics of the Hazelton group of Triassic - Jurassic age. One main copper anomaly was outlined on the claims and this anomaly deserves further attention.

MJM
AUGUST 1970
NIGEL

INTRODUCTION

Between April 29 and May 15, 1970, a geochemical soil survey was done on the "O" claims by a field crew of four men working for El Paso Mining and Milling Company. The claims covered in this work include "O" No.'s 5, 6, 8, 25 and 27, which are owned by El Paso Mining and Milling Company and were originally part of a larger group of claims located and recorded in June 1967, three miles north of Fulton Lake and six miles west of Topley Landing on Babine Lake.

The claims straddle a small slough about 1500 feet long east - west by 800 feet north-south which opens into another slough at its south-east end. This latter slough is roughly 800 feet east - west by 500 feet north - south. The topography is flat to rolling with a total elevation change from 2850 feet at the slough to about 3000 feet at the north end of the claims. The terrain consists of open and timbered (spruce) swamps broken by low jack pine ridges. The only outcrop noted was along the south edge of the main slough.

Access to the property is via helicopter from Houston or Smithers, about 30 miles to the southwest. However, the Topley to Granisle road is within four miles of the claims.

PRJ

FIELDWORK

The fieldwork completed in May 1970 by El Paso Mining and Milling Company on the "O" claims consisted of a geochemical soil survey. A north-south baseline was run for 4,000 feet with a staff compass and tape, roughly through the center of the "O" claims. A central point on this line was used as grid control and designated 5,000 N, 5,000 E. East-west traverse lines were run at 200-foot spacing from 2800 N to 6600 N; i.e., 19 lines with stations set at 100 foot intervals from 40 E to 70 E. The small lake and extremely swampy areas could not be traversed, but otherwise an area about 4,000 feet north-south by 3,000 feet east-west was covered. All traverse lines were tried at their east and west ends. Topographic features such as streams, lakes, swamps, ridges and timbered areas were indicated on the map as well as any areas of rock outcrop.

A soil sample was taken at each station using a four foot long, 1½-inch auger. The sample was taken from the "B" soil horizon wherever possible. In the swampy areas, it was difficult to avoid including some organic material in the sample, even at depths up to three feet. Each soil sample was placed in a kraft envelope marked with the station coordinates; e.g., 50 N, 50 E for 5,000 north, 5,000 east. In all, 464 samples were collected and analyzed for total copper, lead, zinc and molybdenum by Chemex Labs Ltd., 1416 Crown Street, North Vancouver, B.C. Frequency curves were plotted for copper, zinc and lead and from these plots and some statistical analysis, the background and anomalous values were established. The copper, zinc and lead analyses in parts per million were plotted on base maps at a scale of one inch equals 200 feet and

[Signature]

contoured to indicate the anomalous results for each metal. These contour maps are included in the map envelope at the back of this report.

GENERAL GEOLOGY

The Babine Lake area is underlain by sedimentary and volcanic rocks of the Hazelton group of Triassic - Jurassic age. These rocks include andesite, latite and rhyolite flows and related tuffs and breccias. On the east side of Babine Lake, at the Granisle Copper mine and on Newman Peninsula, the Hazelton rocks are intruded by small granitic plugs with associated copper mineralization.

The only outcrops seen on the property occur along the south edge of the small lake and include quartz latite porphyry, amygdaloidal andesite; and tuff-agglomerate. All of these rocks are considered members of the Hazelton volcanic group. A few specks of bornite, chalcocite and malachite were seen in the amygdaloidal andesite.

GEOCHEMICAL RESULTS

i) COPPER

The arithmetic mean of all the copper analyses is 39 ppm. From the frequency curve for copper (Figure 1), the norm or background value is about 25 ppm. The possibly anomalous "copper" range is taken as two to four times background, or 50 to 100 ppm. "Probably anomalous" values range from four to eight times background, or 100 to 200 ppm. "Definitely anomalous" values are shown as those above 200 ppm copper. Accordingly, the plot of "Copper in ppm", Drawing No. 93 L 16 - A19,

[Signature]

which is in the rear map pocket, is contoured using a 50 ppm contour interval below 100 ppm and 100 ppm contour interval above 100 ppm. The area of "possibly anomalous" copper values in the soil has been shown in yellow, "probably anomalous" area in orange and "definitely anomalous" area in red.

The main area of anomalous copper values is just south of the lake. The anomalous area is open to the north and southeast due to water cover. A number of isolated outcrops of volcanic rock are present in this area and some specimens show a little copper mineralization.

ii) ZINC

The arithmetic mean of all zinc analyses is 90 ppm. From the frequency curve for zinc, Figure 2, the background value is about 80 ppm. The "possibly anomalous" range is taken as 200 to 300 ppm zinc; the "probably anomalous" range from 300 - 500 ppm zinc; and the "definitely anomalous" as greater than 500 ppm. These three categories of anomaly have been color coded as for copper and shown on Drawing No. 93 L 16 - A22, which is included in the rear map pocket.

The only area of anomalous zinc values is at the western end of lines 56 N, 58 N and 60 N and this anomaly coincides fairly well with a minor copper soil anomaly in the same area.

iii) LEAD

The arithmetic mean of all lead analyses is 21 ppm. From the frequency curve for lead, Figure 3, the following parameters have been established:

| | |
|--------------------------|--------------|
| Background | 20 ppm lead. |
| Possibly anomalous range | 25 - 50 ppm. |

JRW

No lead values greater than 50 ppm. were obtained in this survey.

None of the "possibly anomalous" lead anomalies are considered particularly significant.

iv) MOLYBDENUM

The molybdenum content of the soils in this area is particularly low with most of the analyses 0 - 1 ppm. Seven scattered molybdenum analyses range from 2 to 10 ppm. This data was not considered sufficiently significant for further analysis.

CONCLUSIONS

The geochemical soil survey on the "O" claims has outlined a copper anomaly south of the lake on "O" No. 8 claim. This copper anomaly is considered quite significant for the following reasons:

- i) it occurs across several traverse lines.
- ii) it is open to the north and southeast.
- iii) it is associated with rather sparse outcrops of volcanic rock, some of which show a little copper mineralization.
- iv) the anomalous values are generally higher on higher ground and lower in the swampy areas.

APPENDIX B

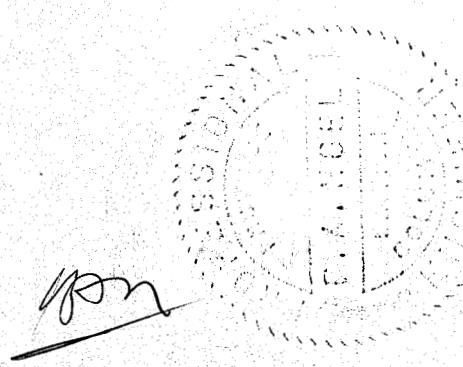

STATEMENT OF QUALIFICATIONS

STATEMENT OF QUALIFICATIONS

The fieldwork for this report was done under the supervision of G.A. Noel, whose qualifications are outlined below:

G.A. NOEL: P. Eng. (Geol. Eng.), Manager of Canadian Exploration for El Paso Mining and Milling Company, Vancouver, B.C.

Completed B.A. Sc. (Geology) at University of B.C. in 1950 and M.A.Sc. (Geology) at University of Toronto in 1951; employed by Kennco Explorations (Canada) Ltd. from May 1951 through March 1956 as a field geologist in B.C. and Yukon Territory under the supervision of J.S. Scott; employed by Utah Construction and Mining Co. from March 1956 through September 1969 in B.C. and Alaska mineral exploration as a project geologist, acting district geologist and senior project geologist under L.C. Clark, W. Bourret, H.G. Peacock and E.S. Rugg; opened an office for El Paso in Vancouver and built up permanent and temporary staff for the 1970 field season.

STATEMENT OF COSTS

STATEMENT OF COSTS

1970 SOIL

SALARIES

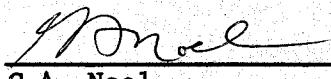

| | | |
|--------------|-------------------------|-------------------|
| E.H. Ewer | 15 days @ \$1,000/month | \$500.00 |
| R. Wellwood | 15 days @ \$575/month | \$287.50 |
| P. Verner | 15 days @ \$850/month | \$425.00 |
| H. Derickson | 15 days @ \$700/month | <u>\$350.00</u> |
| | TOTAL SALARIES | <u>\$1,562.50</u> |

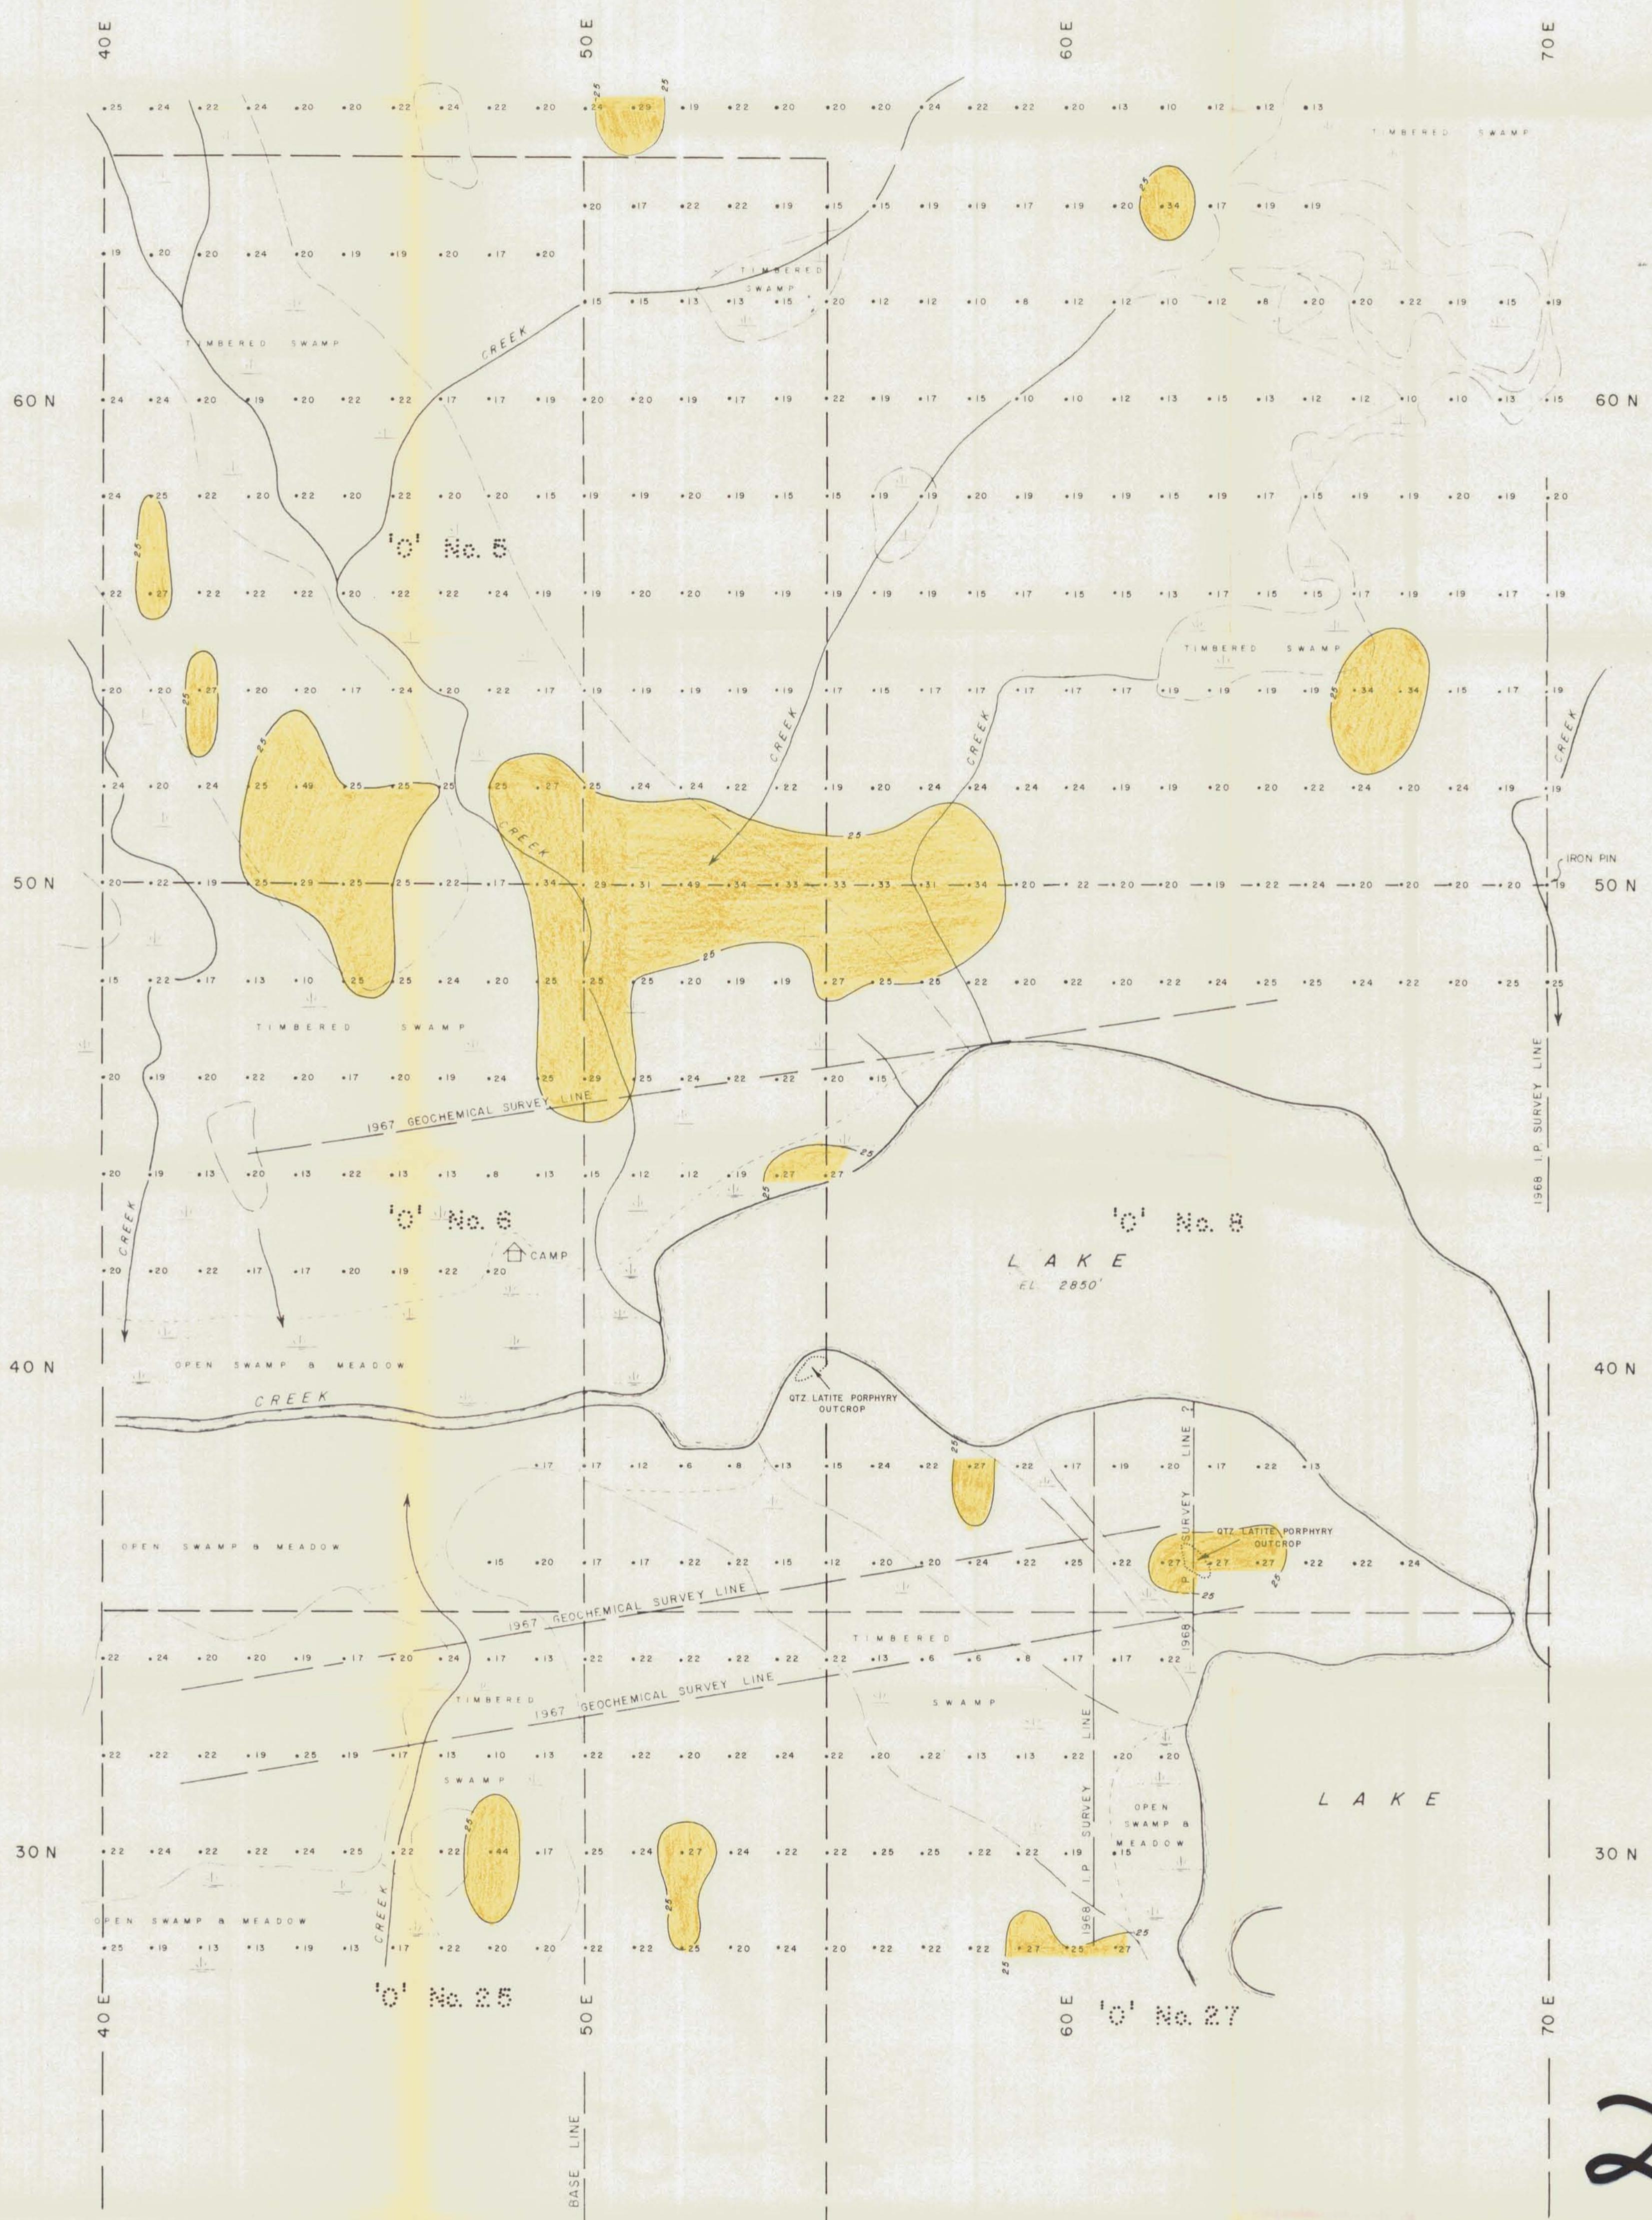

Analysis of Soil Samples for Cu, Pb, Zn, Mo
464 samples @ \$2.50 \$1,160.00

Helicopter Servicing \$ 800.00

Food and Supplies \$ 300.00

TOTAL \$3,822.50

G.A. Noel
