#2 Geochemical Survey - contoured	1 inch to 400 feet

INTRODUCTION

Sixty-two mineral claims are held by Montego Resources Ltd. (NPL) at Kump Lake, twenty miles north of Princeton, B.C., in the Similkameen Mining Division.

The Lisa group was staked by R. MacBean in 1971 and the Ad group by M.P. Stadnyk in 1972.

This report concerns only the geochemical survey carried out by Stadnyk Exploration Services Ltd. during June 1972. Line cutting and a magnetometer survey was carried out earlier in the year and is covered by a report by the same company dated June 8, 1972.

LOCATION AND ACCESS

The property is situated over Pike Mountain and north to Kump Lake, B.C. It is approximately twenty miles north-north west of Princeton, B.C. and approximately one mile west of the Princeton - Merritt Highway (Number 5).

Co-ordinates at the south east corner are:

39° 43' North Latitude

120° 38' West Longitude.

Road access is possible from No. 5 Highway at the Cardinal Ranch turn-off at Gladstone Lake, and then south for two miles along an old logging road to Kump Lake.

Elevations of the property range from 3700 feet above sea level at Kump Lake to over 4700 feet on the summit of Pike Mountain.

MINERAL CLAIMS

<u>Claim</u>	<u>Locator</u>	<u>Record No.</u>	<u>Date Recorded</u>
LISA 1 - 20	Bob MacBean	33273 - 33292	May 19, 1971
LISA 26 - 45	Bob MacBean	33293 - 33312	May 19, 1971
AD 1 - 20	M.P. Stadnyk	35127 - 35146	Apr 17, 1972
AD 21 - 22	M.P. Stadnyk	35541 - 35542	May 19, 1972

HISTORY

No evidence of field work was noted during the line cutting, magnetometer or geochemical surveys.

GRID

A grid of 48 miles of line was cut out for the magnetometer survey. This grid was also utilized for the soil sampling.

The base and tie lines were cut north while cross lines were cut east and west. The base and western tie lines were 8,400 feet in length while the eastern tie lines were 7,200 feet long.

The base line was well blazed, marked and flagged at 200 foot intervals. Cross lines were 400 feet apart with blazed, flagged and marked stations at 100 foot intervals.

GEOCHEMICAL SURVEY

Soil Sampling

1,997 soil samples were collected and analysed for copper and molybdenum.

Samples were taken at 100 foot intervals along all cross lines and at 200 foot intervals along base and tie lines.

Each hole was dug to a depth of 3 to 14 inches with an average depth of 10-12 inches. The soil sample was placed in a marked kraft paper envelope. The following data was recorded for each sample - location, vegetation cover, description of soil, texture and colour, sample depth, slope direction and approximate angle, and any other remarks relevant to topography such as creeks, bogs, swamps, or barren rock.

Geochemical Analysis

All samples were sent to Core Laboratories Ltd, Vancouver, B.C. where they were tested for copper and molybdenum.

Samples were dried at the laboratory and sieved to -80 mesh. 0.5 grams of the fraction was digested by hot 70% perchloric and concentrated nitric acid for a two hour period. Concentration of solvents were in the proportion of 5:3.

Analysis was by atomic absorption in parts per million. Certificates of Analyses are included in the appendix of this report.

Interpretation

Statistical analysis of all determinations using metal content (p.p.m. copper) vs. cumulative percent frequency, plotted on semi-log graph paper revealed a background value of 24 p.p.m., and anomalous values for above 58 p.p.m.

Copper values ranged from 3 to 200 p.p.m.

All molybdenum determinations were less than one p.p.m.

All detected anomalies were small in area and for the most part corresponded with drainage. A number of single high readings were found but they are probably the result of mineralized glacial debris.

No correlation was found to exist between the geochemical and magnetometer surveys.

PERSONNEL

The following personnel were engaged on soil sampling of the property between June 10 and 15, 1972, under the direction of the author.

J.R. Ashdown, G. Budgell, B. Kennedy, J. McQuarry,
M. McQuarry, N. Newsom and J. Pitcher.

CAMP

A camp, comprising of a cook tent and three other tents, was set up on the edge of Kump Lake. Supplies were acquired from Princeton, B.C.

A Ford 3/4 ton 4X4 was used to bring in the camp, supplies and personnel. This vehicle, tents, and other necessary equipment were supplied by Stadnyk Exploration Services Ltd.

CONCLUSIONS AND RECOMMENDATIONS

A total of 1,997 soil samples were collected on the Lisa - Ad mineral claims held by Montego Resources Ltd. (NPL) on its property situated at Kump Lake, B.C. in the Similkameen Mining Division.

All samples were tested for copper and molybdenum. The background values for copper were 24 p.p.m., while all molybdenum samples returned values of less than one p.p.m.

The plotted and contoured values for copper revealed small anomalies generally associated with streams or other drainage features. There was no correlation with the magnetometer survey carried out by the author earlier in the year.

It is recommended that no further work be carried out over the gridded area of the Lisa #1-40 and Ad #1-22 mineral claims at this time in view of the poor geochemical response.

However, on the basis of the magnetometer survey, more work should be carried out on the balance of the property west of these surveys.

Report respectfully submitted,

M.P. Stadnyk
Stadnyk Exploration Services Ltd.

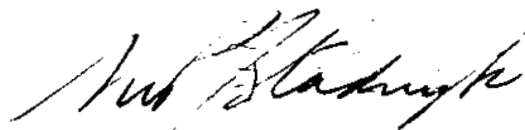

December 29, 1972

CERTIFICATION

I, Mike Peter Stadnyk, of North Delta, B.C., do hereby certify that:

1. I am a mining exploration geologist residing at 11625 Cory Drive, North Delta, B.C.
2. I am a graduate of the University of New Zealand and have practised my profession in Canada for the past eleven years.
3. I am an Associate Member of the Geological Association of Canada.
4. Information contained in the report is based upon work carried out by me, or at my direction, between the period of June 10 - 15, 1972.

December 29, 1972
North Delta, B.C.

M.P. Stadnyk, B.Sc.
Geologist.
