Plot of zinc copper values. #2

SUMMARY

A soil sampling program was commenced on August 30, 1973 on the Bon 48 to Bon 65 Mineral Claims. Work was completed on the Bon 52, 53, and 56 to 65 by September 21 and all samples submitted for analysis. It was the intention to complete the survey if these showed anything of interest, but in light of the negative results obtained, no further work can be recommended at this time.

The claims are staked 4 wide from two location lines generally running at 140° azimuth. These location lines were followed as closely as possible by straight base lines as shown on attached map. Cross lines at 400 foot intervals were run independently from each baseline and sample stations flagged at 100 foot intervals. Samples were not taken in areas of disturbed soil.

Rock outcrops are few and usually of small dimension. Bed rock consists of schisted rocks of the Snowshoe formation, generally silvery green schists or phyllites with bands and lenses of creamy limestone. Ankeritic material is widespread and is probably responsible for the cream colored limestones. Both transverse and strike veins were noted in the vicinity of placer operations but no mineralization of practical interest was noted.

It is reported that coarse gold has been found in Nugget Gulch. As nuggets up to one ounce are reported it is probably of very local origin but this does not mean that gold-bearing veins of economic significance exist in the area.

A total of 463 soil samples was taken and determinations made for silver lead zinc and copper. No areas of probable or definite anomalous results were found. Probable anomalous values were set at 4 - 6 ppm Ag, 200 - 300 ppm Pb, 120 - 180 ppm copper and 800 - 1200 ppm zinc, to occur in two or more consecutive stations. No such situations occurred.

INTRODUCTION

Between August 30 and September 20 the geochemical soil survey described herein was done when other work permitted either B. R. Mitchell or J. A. Mitchell to be present to supervise it.

The claims surveyed are part of Group #2263 dated October 19, 1971 consisting of the Bon 46 to 65 mineral claims, record numbers 60593 to 60612 inclusive with expiry date October 1, 1973. The purpose of the survey was to determine if mineralization of possible interest existed on the Claims and to Keep them in good standing to October 1, 1974 pending further investigations. They are in the Cariboo Mining Division.

BEDROCK GEOLOGY

The claims are underlain by rocks of the Snowshoe formation as described by A. Sutherland Brown in Bulletin #38 of the B. C. Department of Mines and Petroleum Resources.

The dominant rock type in the claims area appears to be a silvery green schist or phyllite in which there are frequent bands or elongated lenses of limestone of a creamy color. Quartzite float was noted, but very little was seen in place. It does occur in the vicinity of the Gisco vein. This is probably the most important known occurrence of mineral known on the group but it is certainly not of economic importance. It contains auriferous pyrite in a quartz gangue, does not exceed 12" in width and this is restricted to a length of 40 feet where it crosses the flaggy quartzites.

The Pittman lead-zinc replacement zone also described in Bulletin 30 also underlies the area sampled, but the sampling failed to indicate anything of unusual significance. The outcrops are now covered by gravel from placer operations, but if they were of any appreciable extent, the extensions should have been picked up by the soil sampling.

Other quartz veins seen in the placer diggings were generally barren and lacked continuity.

FIELD WORK

A survey grid was laid out by Silva Compass and nylon tape over 12 of the 16 claims to be sampled. The claims lay 4 wide from 2 location lines usually running close to 140° azimuth and less than 3000 feet apart. The location lines were used for base lines and 2 independent sets of cross lines were flagged at 400 foot intervals to the outer boundaries of the claims. Sample stations were at intervals of 100 feet.

The results are plotted on two maps. One shows the silver and lead and the other the copper and zinc.

Samples were taken by a 1 inch diameter auger to an average depth of 14 inches and the bottom 4 to 6 inches of soil removed from the drill and placed in water resistant envelopes, duly numbered, and other pertinent data such as slope and soil type, color, etc., recorded.

No samples were taken where the soil had been removed or disturbed by Placer Mining Operations in and adjacent to Nugget Gulch.

All samples were delivered for assay to General Testing Laboratories in Vancouver, B. C. The last 226 samples were flown directly to Vancouver by small plane to insure delivery in time for assays to be completed before October 1.

Determinations were made for silver lead, zinc and copper. Treatment was by complete digestion in hot HNO₃ plus HCCO₄ and extraction by atomic absorption. The metal content was recorded in parts per million.

RESULTS OF SURVEY AND CONCLUSION

As indicated by attached certificates of assay from General Testing Laboratories, nothing of economic significance was obtained in the samples, even over areas of weak mineralization described in Bulletin #38 of the B. C. Department of Mines and Petroleum Resources.

It is therefore recommended that no further work be attempted in the area of these claims.

Respectfully submitted,

J. A. Mitchell, P.Eng.

APPENDIX A

Geochemical Assays

APPENDIX B

Statement of Costs

A. Field Work, August 30 to September 20:		
Salary - B. R. Mitchell	8 days @ \$50/day	\$ 400.00
J. A. Mitchell	5 days @ \$50/day	250.00
B. Miller	1 day (11 hours)	50.00
R. Lamb	8 days @ \$40/day	320.00
J. Vermette	9 days @ \$40/day	<u>360.00</u>
		\$1,380.00
Miscellaneous:		
Leased vehicle @ \$380. per month		\$ 190.00
Gas @ 10 miles to gallon 30 miles/day, 11 days		19.80
Room and Board (B.R. & J.A.Mitchell) 13 men days at \$14 per day		182.00
B. Geochemical Analyses: 463 samples for Ag Pb Zn Cu @ \$2.85 per sample		
		1,319.55
C Draughting Charge		
		<u>59.95</u>
	TOTAL COST	\$3,151.30
	COST PER CLAIM	\$ 157.56

APPENDIX C

Statement of Qualifications - B. R. Mitchell

THIS WILL CERTIFY that:

1. B. R. Mitchell is a graduate of the University of British Columbia, Science 1966, after 10 years of intermittent employment in exploration work.
2. He has 4 years' experience as a petroleum geophysicist with Mobil Oil Canada Ltd. 1966 to 1970.
3. He was employed as a hardrock geologist by El Paso Mining and Milling Company for 1 year, 1971 to 1972.
4. He has had previous experience in soil sampling under my supervision in the Kamloops area and, previously, in the Hope area for El Paso Mining and Milling Co. under the supervision of G. Noel.
