The Mining Recorder  
Nanaimo Mining Division  
Court House  
Nanaimo, B.C.

Dear Sir:

I am enclosing the following documents as part of  
a Diamond Drilling Report:

- #1 1. A 1:50,000 location map showing the location of the property
- #2-3 2. Two 1" = 800' Claim-Topography maps showing the locations of Holes 74-1, 74-2, 74-3, 74-7 (on one map) and 74-6 (on a second map)
- 3. A copy of the logs for the five holes signed by myself under my seal
- 4. A statement of costs being claimed for assessment for each of the Purple, Blue and Orange groups
- 5. A copy of each of three affidavits on Application for Certificate of Work for the three groups.

I trust you will find everything in satisfactory order.

#4-7 Claim maps

Yours truly

R. Somerville, P.Eng.

DIAMOND DRILL CORE LOG

DRILL HOLE NO.	MW 74-3	LOCATION:	25130 N, 19980 E Claim MWC 151
AZIMUTH:	-	CORE SIZE:	I.A.X.
INCLINATION:	-90°	CORE STORAGE:	Imperial Oil Warehouse Puntledge Road Courtenay, B.C.
ELEVATION:	3075'		

DESCRIPTION

FROM	TO	
0	48.5	Milled intrusive breccia with mainly strongly chloritized, small, subrounded to subangular basalt clasts and a few large diorite clasts. Pyrrhotite with minor pyrite and chalcopyrite occurs as coarse patches filling voids in the breccia matrix. The diorite clasts contain disseminated pyrrhotite replacing chloritized hornblende.
48.5	123	Hornblende quartz diorite with disseminated pyrrhotite in the chloritized hornblende. Minor zones of brecciation occur within the diorite, which appears to be a large clast or group of six clasts.
123	220	Intrusive breccia with mainly small, angular, strongly chloritized basalt clasts, minor diorite and dacite porphyry clasts. Minor to abundant pyrrhotite with minor pyrite and chalcopyrite filling voids in breccia.
220	276	Plagioclase porphyritic basalt, moderately fractured, hard, fresh, with chloritic fractures and minor calcite on some fractures.

DIAMOND DRILL CORE LOG

DRILL HOLE NO.	MW 74-7	LOCATION:	25130N, 19980E Claim MWC 151
AZIMUTH:	220°	CORE SIZE:	I.A.X.
INCLINATION:	-45°	CORE STORAGE:	Imperial Oil Warehouse Puntledge Road Courtenay, B.C.
ELEVATION:	3075'		

DESCRIPTION

FROM	TO	
0	30	Milled intrusive breccia with mainly strongly chloritized small, subrounded to subangular basalt clasts and a few large diorite clasts. Pyrrhotite with minor pyrite and chalcopyrite occurs as coarse patches filling voids in the breccia matrix. The diorite clasts contain disseminated pyrrhotite replacing chloritized hornblende.
30	45	Hornblende quartz diorite with disseminated pyrrhotite in the chloritized hornblende.

Note: Hole terminated temporarily due to fire closure.

DIAMOND DRILL CORE LOG

DRILL HOLE NO.	MW 74-1	LOCATION:	28,210N, 20,270E Claim MWC 119
AZIMUTH:	185°	CORE SIZE:	BQ
INCLINATION:	-61°	CORE STORAGE:	Imperial Oil Warehouse Puntledge Avenue Courtenay, B.C.
ELEVATION:	2210'		

DESCRIPTION

FROM	TO	DESCRIPTION
0	21	Overburden.
21	116	Plagioclase porphyritic basalt, hard, fresh, dark greenish gray with very minor irregular pods and veins of quartz-epidote. Sulphides absent to trace pyrite on fractures and with quartz-epidote.
116	221	5' to 30' flows of plagioclase porphyritic and massive basalt. Scattered thin irregular shear zones with calcite on open shears and fractures. Minor pyrrhotite, pyrite, and chalcopyrite in quartz-plagioclase-epidote veins.
221	255	Sheared and broken plagioclase porphyritic basalt. Calcite veins in open zones and irregular zones of plagioclase-quartz, locally epidotized and with minor actinolite scattered at random orientations. Pyrrhotite and pyrite with minor chalcopyrite occurs in some quartz-plagioclase veins and on fractures in highly fractured zones.

DIAMOND DRILL CORE LOG

DRILL HOLE NO.	MW 74-2	LOCATION:	27,890N, 20,360E Claim MWC 119
AZIMUTH:	340°	CORE SIZE:	BQ
INCLINATION:	-61.5°	CORE STORAGE:	Imperial Oil Warehouse Puntledge Avenue Courtenay, B.C.
ELEVATION:	2280'		

DESCRIPTION

FROM	TO	
0	30	Overburden.
30	55.5	Shock breccia composed mainly of small, angular, closely packed siltstone and quartzite clasts which are moderately to intensely biotitized. Voids between breccia clasts are quartz-lined and filled with pyrrhotite, chalcopyrite and pyrite.
55.5	182.5	Shock breccia composed mainly of small, angular, closely packed basalt clasts which are intensely biotitized. Local zones of larger clasts, up to 6" diameter are weakly biotitized. Scattered voids between breccia clasts are filled with medium to coarse pyrrhotite, chalcopyrite and pyrite. Sulphides are most abundant in zones with the most intense biotite alteration and the most open or replaceable voids.
182.5	206.5	Dacite porphyry dike cutting breccia, dike contacts with breccia are biotitized.
206.5	294.7	Biotitized shock breccia with closely packed basalt clasts. The clasts are commonly one inch in diameter and locally where they exceed one foot in diameter they are fresh to weakly biotitized. Random patches of coarse pyrrhotite, chalcopyrite and pyrite fill breccia voids.
294.7	305.0	Highly fractured and broken, slightly chloritized basalt with chloritic slickensides on most fractures.
305.0	305.5	Fault gouge.
305.5	317.0	Fractured fresh massive basalt.

DIAMOND DRILL CORE LOG

DRILL HOLE NO.	MW 74-6	LOCATION:	28600N, 8160E Claim MWC 206
AZIMUTH:	180°	CORE SIZE:	BQ
INCLINATION:	-45°	CORE STORAGE:	Imperial Oil Warehouse Puntledge Road Courtenay, B.C.
ELEVATION:	4560'		

DESCRIPTION

FROM	TO	DESCRIPTION
0	85.5	Hornblende quartz diorite with moderately chloritized hornblende, intensely fractured, minor pyrite on fractures.
85.5	199.3	Siltstone and quartzite. Intensely fractured and bleached at diorite contacts. Minor zones of kaolinization associated with shears and shattered zones.
199.3	242.5	Hornblende quartz diorite with intensely biotitized hornblende and minor fine disseminated secondary biotite interstitial to plagioclase. Zones of kaolin and sericite alteration associated with minor quartz-calcite veining. Pyrite and chalcopyrite disseminated in biotitized hornblende and less commonly on fractures.
242.5	244.0	Quartz flooded, shattered, diorite with abundant coarse pyrite and chalcopyrite.
244.0	398.0	Intensely biotitized hornblende quartz diorite with zones of intense kaolinization and silicified halos along fractures. Minor disseminated pyrite and chalcopyrite, trace realgar, mainly disseminated in altered hornblende.
398.0	410.0	Siltstone, intensely fractured and bleached along fractures.
410.0	435.5	Biotitized hornblende quartz diorite, minor disseminated pyrite and chalcopyrite.
435.5	493.0	Siltstone, intensely fractured, minor pyrite and chalcopyrite on fractures.
