The Honorable
Leo Minnick

Minister of Mines
and Petroleum Resources

Dear Sir

Department of
Mines and Petroleum Resources
ASSESSMENT REPORT

NO. 5357 MAP

From the 23^d of Sept to the 31st of Sept was spent preparing for and working on the property of Thomas Gordon prospector of B-3 Glenfair Apts, Kamloops, B.C. Mr. Gordon is infirm and can no longer do his assessment work, I did this work because I did not want to see the property go to nefarious people that are staked in the vicinity. Three men and myself were on Mr. Gordon's property for two days, these men were instrumental in brushing out the old trail of numerous windfalls, and some saturation prospecting of the 8 claims of the Daisie Group, the claims are located $1\frac{1}{2}$ miles beyond the head of Franklyn arm, a branch of Chilko lake, "Lalinton Mining Division". The transportation was by four wheel drive vehicle owned by one of the prospectors, as it was hunting season, no common sense rental was available. The four men proceeded to Chilko lake lodge where we put up for the night. We then proceeded the next morning to Franklyn Arm by power boat and set about our tasks. The trail was dominated by windfalls. Since my visit in 1973, also to do assessment work. No grubstake was acquired for Mr. Gordon's property, however I am afraid that this is the last time I will be able to

record work for anyone anymore as a favor,
because of the astronomical cost of men and
equipment. I have looked after two prospectors
for two years now, as well as my own interest.
I would like the "Dept of Mines" to examine
Mr Gordon's property in the early summer, as
saturation prospecting uncovered some interesting
minerals in the old old workings. The claims
straddle a contact of coast granite and
limestone. The pyritization is mainly pyrrhotite,
with quite significant chalcopyrite as well.
The edge of the contact shows quite a bit of
Moly and Sphalerite. The heavy zone of minerals
is 15' wide and 300' long and possibly
quite deep, as the intrusion is quite coarse and
the limestone is quite receptive as host rock.
The property was drilled in packrack fashion many
years ago, and Anaconda was on the property
also and came up with fair "Cu" and "Ag"
assays, and it is quite possible there is
a producer here for the people of Bl.
(open pit). The prospectors travelling to and working
on the property were Mr. Gordon, box of
Box 1484, Merritt, B.C., Mr William Anderson
of Logan Lake, B.C. who previously worked
for Mr Gordon at Chilko Lake, and Mr
Albert J. Middle of the St. Helens Hotel
Granville St. Vancouver, and myself of course.
The Davis group of mineral claims record
no's are - 9302 - 9309. four bags of chip
samples were taken on the property, three
have not been assayed but are in my
keeping and will be forwarded to the department
on request. Enclosed find photostat copy
of Anaconda assay sheets of old.

Yours Sincerely
Lorne Donnan
"Prospector"
