

BREAKDOWN OF COSTS - DIAMOND DRILL
HOLE NO. 1 - M-21 GROUP OF MINERAL
CLAIMS, TEXADA ISLAND, B. C.
JUNE 2 to 5, 1975
MARBLE BAY FRACTION #2

LABOUR COSTS

Field Superintendent, J. A. Stewart, and Chief Driller, 3 days @ \$80.00/day	240.00	
Driller, Leo Ouellette 28-1/2 hrs @ \$7.36/hr.	209.76	
Driller Helper, David Lyons 28-1/2 hrs. @ \$7.36/hr.	209.76	
Bushmen: Clearing and moving drill equipment to new site		
David Murphy, 9-1/2 hrs @ \$5.60/hr.	53.20	
George Beyko, 5-1/2 hrs. @ \$5.60/hr.	30.80	
J. White, 12 hrs. @ \$5.60/hr.	53.27	
	<hr/>	\$ 796.79

FOOD AND ACCOMODATION

15 man days @ \$15.00/day	225.00
---------------------------	--------

MATERIALS AND SUPPLIES

Bits used and additional supplies	397.30
Drill Equipment Costs, \$50.00/day, 3 days	150.00

GROUND TRANSPORTATION

3 days - 3/4 ton GMC truck	
1 ton IHC 4 x 4 truck \$50.00 per day	150.00

TOTAL	<hr/> <hr/> \$1,719.09
-------	------------------------

W. G.

STATEMENT OF QUALIFICATIONS

1. I, K. Warren Geiger, am a consulting geologist with head office at: 12225 - 105 Avenue, Edmonton, Alberta, and reside at Box 368, Rocky Mountain House, Alberta.
2. I have a B.Sc., in Mining Engineering from the University of Alberta at Edmonton and M.S. and Ph.D., degrees in Geology from Cornell University, Ithaca, New York.
3. I am a Professional Geologist registered with the Association of Professional Engineers, Geologists and Geophysicists of Alberta.
4. I am a Professional Engineer registered by non-resident license with the Association of Professional Engineers of the Province of British Columbia.
5. I possess nineteen years of experience in the fields of mineral exploration, mining and groundwater geology.

Within the scope of this submission, all information and conclusions are believed to be accurate.

July 10, 1975.

K. Warren Geiger, Ph.D., P.Eng., P.Geol.
Consulting Geologist,
12225 - 105 Avenue,
Edmonton, Alberta.

LOGGED BY K. W. Geiger

DEPTH FEET	FORMATION	SAMPLE NO.	FROM	TO	WIDTH	ASSAYS			
0' -34.0'	Overburden								
34.0'-36.0'	Dike - Serpentine								
36.0'-38.0'	Limestone - Altered to light gray or white with mottled color- ation, probably incipient alteration.								
38.0'-40.3'	Limestone - Light gray to medium gray. Very fine black bands present through most of the section.								
49.3'-50.3'	Limestone - Light gray, highly fractured with crenulated black bands (carbon?). Some very fine metallics (gold?)								
50.3'-55.0'	Marble - White to very light gray. Greenish mineral (possibly malachite) smeared along a few fractures.								
55.0'-56.6'	Limestone - Mottled light gray to white, highly fractured with crenulated black to greenish bands.								
56.6'-58.8'	Limestone - Altered to marble.								
58.8'-62.9'	Limestone - Medium gray - much very fine black banding, some very fine metallics (some gold?).								
62.9'-68.0'	Limestone - Mottled, light gray.								
68.0'-69.0'	Limestone - Mottled, light gray - fractured.								
69.0'-69.2'	Dike - Serpentine								
69.2'-70.2'	Limestone - Marble - Fractured with concentrations of black bands

DEPTH FEET	FORMATION	SAMPLE NO.	FROM	TO	WIDTH	ASSAYS			
70.2'-71.6'	Limestone - White to very light gray marble.								
71.6'-76.4'	Limestone - Light gray - mottled.								
76.4'-82.0'	Limestone - Medium gray - very fine black banding. Very fine metallics here and there throughout.								
82.0'-90.5'	Limestone - Light gray - Generally alternating bleached sections irregular and mottled banded sections, with fractured sections. Minor very fine metallics usually with banding.								
90.5' - 102.0'	Limestone - Medium gray - generally finely banded throughout Some minor fracturing and recrystallization - carbonaceous looking material with interesting metallics along fractures.								
102.0' - 103.6'	Limestone - Mottled light gray to white.								
103.6' - 114.3'	Dike - Andesite - Some skarn mineralization near both contacts. Some shattering with development of epidote and chlorite. Pyrite common in bands throughout.								
114.3' - 115.8'	Limestone - Light gray mottled to white.								
115.8' - 116.8'	Limestone - Medium gray - fractured with black material (carbon?) along fractures.								
116.8' - 119.4'	Limestone - Medium gray - fine black banding throughout. Minor metallics seen.

DEPTH FEET	FORMATION	SAMPLE NO.	FROM	TO	WIDTH	ASSAYS			
119.4' - 123.8'	Limestone - Medium gray to light gray to white in zones.								
	Generally mottled appearance.								
123.8' - 124.8'	Limestone - Bleached to white - some fracturing with black								
	material and minor metallics.								
124.8' - 125.2'	Dike - Serpentine- Shattered and much epidote.								
125.2' - 137.0'	Limestone - Medium gray - generally banded but banding mottled								
	in appearance. Some segments bleached nearly white. Minor								
	metallics here and there. Slight shattering and offset of								
	earlier bands in many places.								
137.6' - 143.3'	Limestone - Bleached to white or very whitish-gray.								
143.3' - 150.4'	Limestone - Light gray to bleached - Generally bleached appear-								
	ance throughout. Remnant banding somewhat shattered. Some								
	minor metallics.								
150.4' - 159.1'	Limestone - Medium gray. Mottled banding and minor shattering.								
159.1' - 160.7'	Dike - Green Andesite - Somewhat serpenténized.								
160.7' - 162.3'	Limestone - Medium gray. Various banding and shattering.								
162.3' - 166.5'	Limestone - Bleached white to very light gray. Metallics along								
	some bands - Serpentine-like alteration along a few fractures.								
166.5' - 174.0'	Limestone - Medium gray - Granulated appearance apparently								
	shattered, ground and rehealed (Marble).
