November, 1977

MINERAL RESOURCES BRANCH
ASSESSMENT REPORT
6619
NO. _____

LOCATION

The property is located on the eastern slopes of Dome Mountain at $126^{\circ} 37'W$ and $54^{\circ} 46' N$.

ACCESS

Access by helicopter is gained to the property from the town of Smithers, British Columbia.

WORK DONE

The crew of two, under Mike Michovsky carried out prospecting of the claims. The location of outcrops is indicated on the accompanying map.

The crew, in their daily routine, prospected to the north of the mineralized area. Outcrops were located in steep creek gullies. The side of one small hill to the northwest exposed shale outcrop with interbedded phyllites. The main goal of the prospecting in this area was the location of reported porphyritic stock, however, this outcropping

was not located, The remainder of the time was spent in laying out of geophysical grid in the area of mineralization. See Sheet I.

The work was carried out during the months of July and August, 1977.

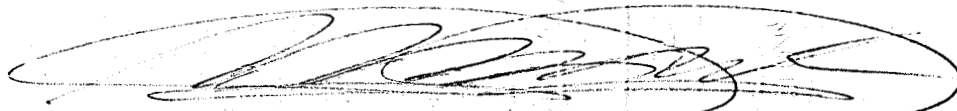

DESCRIPTION OF GEOLOGY

Andesite:	Brown, fine grained, Hazelton Group, in some instances porphyritic felspar phenocryst.
Shale:	Grey to black-grey, finely bedded.
Phyllite:	Milky to light grey, calcareous, interbedded in shale, minor.
Quartz:	veins

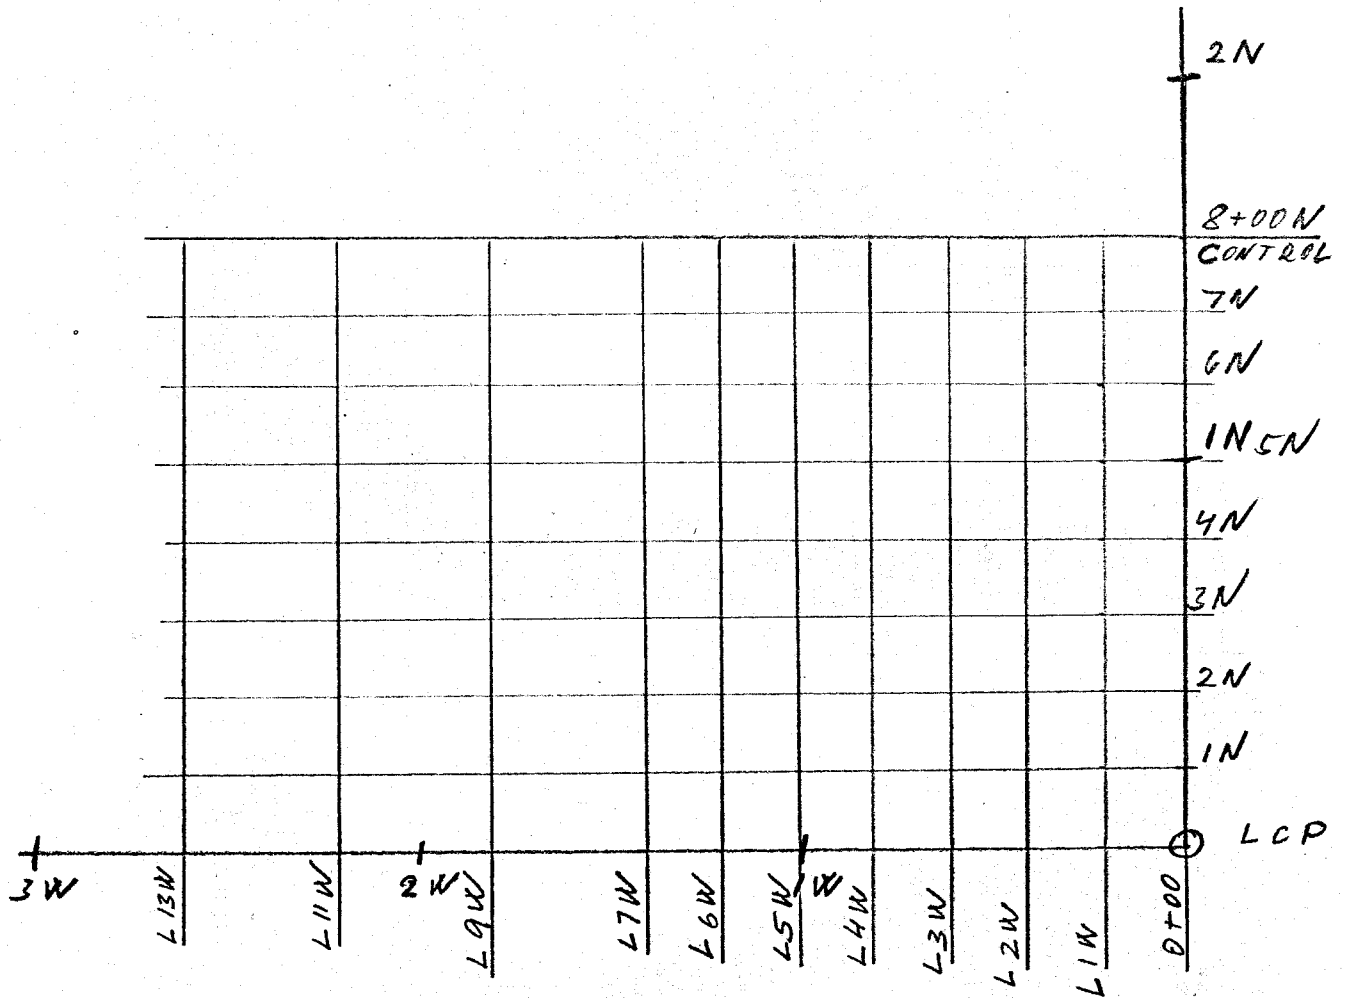

EXPENDITURES

1.	Wages:		
	1 Prospector	18 days at \$50/day	\$ 900.00
	1 Helper	15 days at \$40/day	600.00
2.	Supervisor	2 days at \$175/day	350.00
3.	Helicopter		371.53
4.	Airfare - Plane rental		210.00
	1 ticket Smithers-Vancouver		75.00
5.	Truck rental		84.55
6.	Hotel, meals, Smithers		180.00
7.	Groceries and camp gear		298.92
			<u>3,070.00</u>

Respectfully submitted,

Paul Plicka, P.Geol.
