 O.B. CLAIM

## INTRODUCTION

During May, 1978, the writer spent several days examining showings and the work in general performed during a recent exploration programme on the O.B. Mineral Claim and reverted Crown Grants.

This report is being prepared at the request of the Directors of Viscount Resources Ltd.

## LOCATION AND ACCESS

The centre of the O.B. Mineral Claim and reverted Crown Grants are located approximately 3 kilometers southwest of the Town of Greenwood, British Columbia.

Access to the property is gained by travelling 3 kilometers up the Lind Creek road from Greenwood, British Columbia.

## PROPERTY AND OWNERSHIP

The property consists of the O.B. Mineral Claim (15 units) and six reverted Crown Grants which are listed as follows:

| <u>CLAIM NAME</u>     | <u>RECORD NUMBER</u> | <u>EXPIRY DATE</u> |
|-----------------------|----------------------|--------------------|
| Twin                  | 665                  | March 18, 1979     |
| Connection Fr.        | 666                  | March 18, 1979     |
| Marjorie              | 669                  | March 18, 1979     |
| Trilby                | 667                  | March 18, 1979     |
| Clipper Fr.           | 670                  | March 18, 1979     |
| Mountain View         | 671                  | March 18, 1979     |
| O.B. Claim (15 units) | 696                  | March 11, 1979     |

The mineral claims are owned by Viscount Resources Ltd of Vancouver, British Columbia.

#### TOPOGRAPHICAL AND PHYSICAL ENVIRONMENT

The property lies in rounded, moderately steep terrain with a range in elevation of 780-1,350 meters m.s.l.

The property is covered with second growth fir with willows, birch and cedar occurring near the creeks. The area experiences moderate precipitation, approximately 65 cm per year.

#### GEOLOGY AND MINERALIZATION

The claim area has been described by Members of the Geological Survey of Canada (Map 6-1957, Kettle River, British Columbia Sheet 82E) as being underlain by Jurassic or older greenstones and related sediments, such as greywacke, limestone and

paragneiss. These rocks are in turn intruded by Cretaceous Nelson intrusives. The productive rocks at the Phoenix Mine 7 kilometers to the northeast, are the Triassic limestones of the Brooklyn Formation.

Three main types of mineralization are common to the general area, namely:

- 1) Skarns or altered limestones containing chalcopyrite, pyrite, magnetite and pyrrhotite, with significant gold and silver values.
- 2) Quartz-carbonate shear fillings and veins containing galena, sphalerite and other silver sulphides.
- 3) Porphyry-type copper mineralization in argillaceous sediments, volcanics and intrusive rocks carrying significant gold and silver values. The writer observed a number of mineralized showings on the property which would fall in type three i.e. porphyry-type mineralization, as chalcopyrite, pyrite with silver in an altered volcanic (greenstone). One such sample taken by the writer returned values of 0.54% copper and 0.22 oz/ton silver. (see Appendix A).

#### WORK PROGRAMME

The work completed during the last exploration programme includes line installation, geochemical soil sampling (see Appendix B), prospecting, minor geological mapping and examination and sampling of a number of trenches, cleaning out trenches and shafts and rehabilitating washed-out portions of the access road. The work was carried out by four men under the supervision of Mr. George O'Brien of Greenwood, British Columbia.

The soil samples were taken where possible from the 'B' soil horizon and analysed in the conventional manner. (see Appendices).

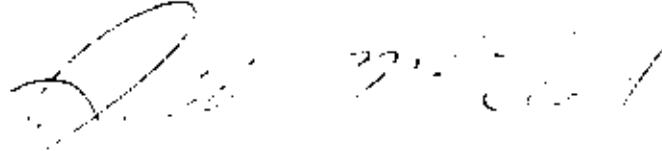

#### CONCLUSIONS AND RECOMMENDATIONS

A number of anomalous areas are indicated by the recently completed geochemical soil programme and a number of mineralized outcroppings were examined.

The writer recommends that geological mapping of the property be completed and that an accurate correlation be made between the known mineralized areas, the geology and the geochemical data. Upon completion of this work a recommendation for bulldozer trenching and/or drilling can

be made.

Respectfully submitted,

A handwritten signature in cursive script, appearing to read "James W. McLeod".

James W. McLeod, Geologist

CERTIFICATE

I, JAMES W. McLEOD, of the City of Vancouver, Province of British Columbia, hereby certify as follows:

1. I am a geologist and an Associate Member of the Geological Association of Canada.
2. I reside at 4086 West 17th Avenue, Vancouver, British Columbia, V6S 1A6.
3. I graduated in 1969 from the University of British Columbia, B.Sc., (Major Geology).
4. I have practised my profession since 1969.
5. The above report is based on field work performed under my direction by others during 1978.
6. I have not, directly or indirectly, received or expect to receive any interest, direct or indirect, in the property of Viscount Resources Ltd., or any affiliate, but I do own 1,000 shares of Viscount Resources Ltd., which I purchased for \$0.20/share during the primary distribution.
