Dec. 8th, 1978
THE ANTHONY GROUP

Itemized cost statement

Work done July 26th - August 1st, 1978

Cost of physical -----	\$224.00
Cost of drilling program	
labor— four men worked 31 hrs. (drilling, moving & laying water hose) \$7 per. hr.-	868.00
Material used, Two Diamond bits (New) one used bit . \$80.00 per unit-----	200.00
Accommodation for four men--8 days (\$20.00 per) -----	160.00
Food ***-----	200.00
Total Cost of operation-----	\$1,652.00

A more detailed account of work done.

Three men worked on the Drill at all times. Two men were required to operate drill; the third man attended to the water supply. The fourth man when not needed at the drill site improved the access trail.

We used two new Diamond Drill bits; and one partially used one. As we were drilling through overburden; and because our water supply was poor our bits did not last long. We drilled three holes, $1\frac{1}{2}$ in. (3.17 cent.) in diameter, with a total depth of 7.3 metres.

The access trail cleared was 500 metres long by one metre wide. The initial clearing was done by two men in one day. it was then improved by the fourth man on several days.
creek

The water supply was obtained from a small some 300 metres from drill sites no. 2 & 3. and one hundred metres from drill site No. 1. This required laying the plastic hose twice. Water was pumped to drill sites.

Statistics

Drill Core 7/8 "
Inclination 45 & 60
Elevation 3100 ft.
Core kept at Mr. T. Kuhn's home
560 - 184th St. Surrey, B.C.

Signed

Joseph Franks

Dear Sir;

Concerning your letter of Nov. 2, 1978 (File 166 Cariboo) I wish to explain certain inaccuracies in the presentation of our work report.

First of all, when we presented our Itimized Coet sheet at Queensl, there were corrections to be made. Because we wanted to do it at that time and there was not too much time before ~~passing~~ time, as you know errors did creep in.

I hope the present one is correct.

Please find enclosed the map drawn up to the 1 in. equals 400 ft. It is attached to the department of mines map MP3 A/W

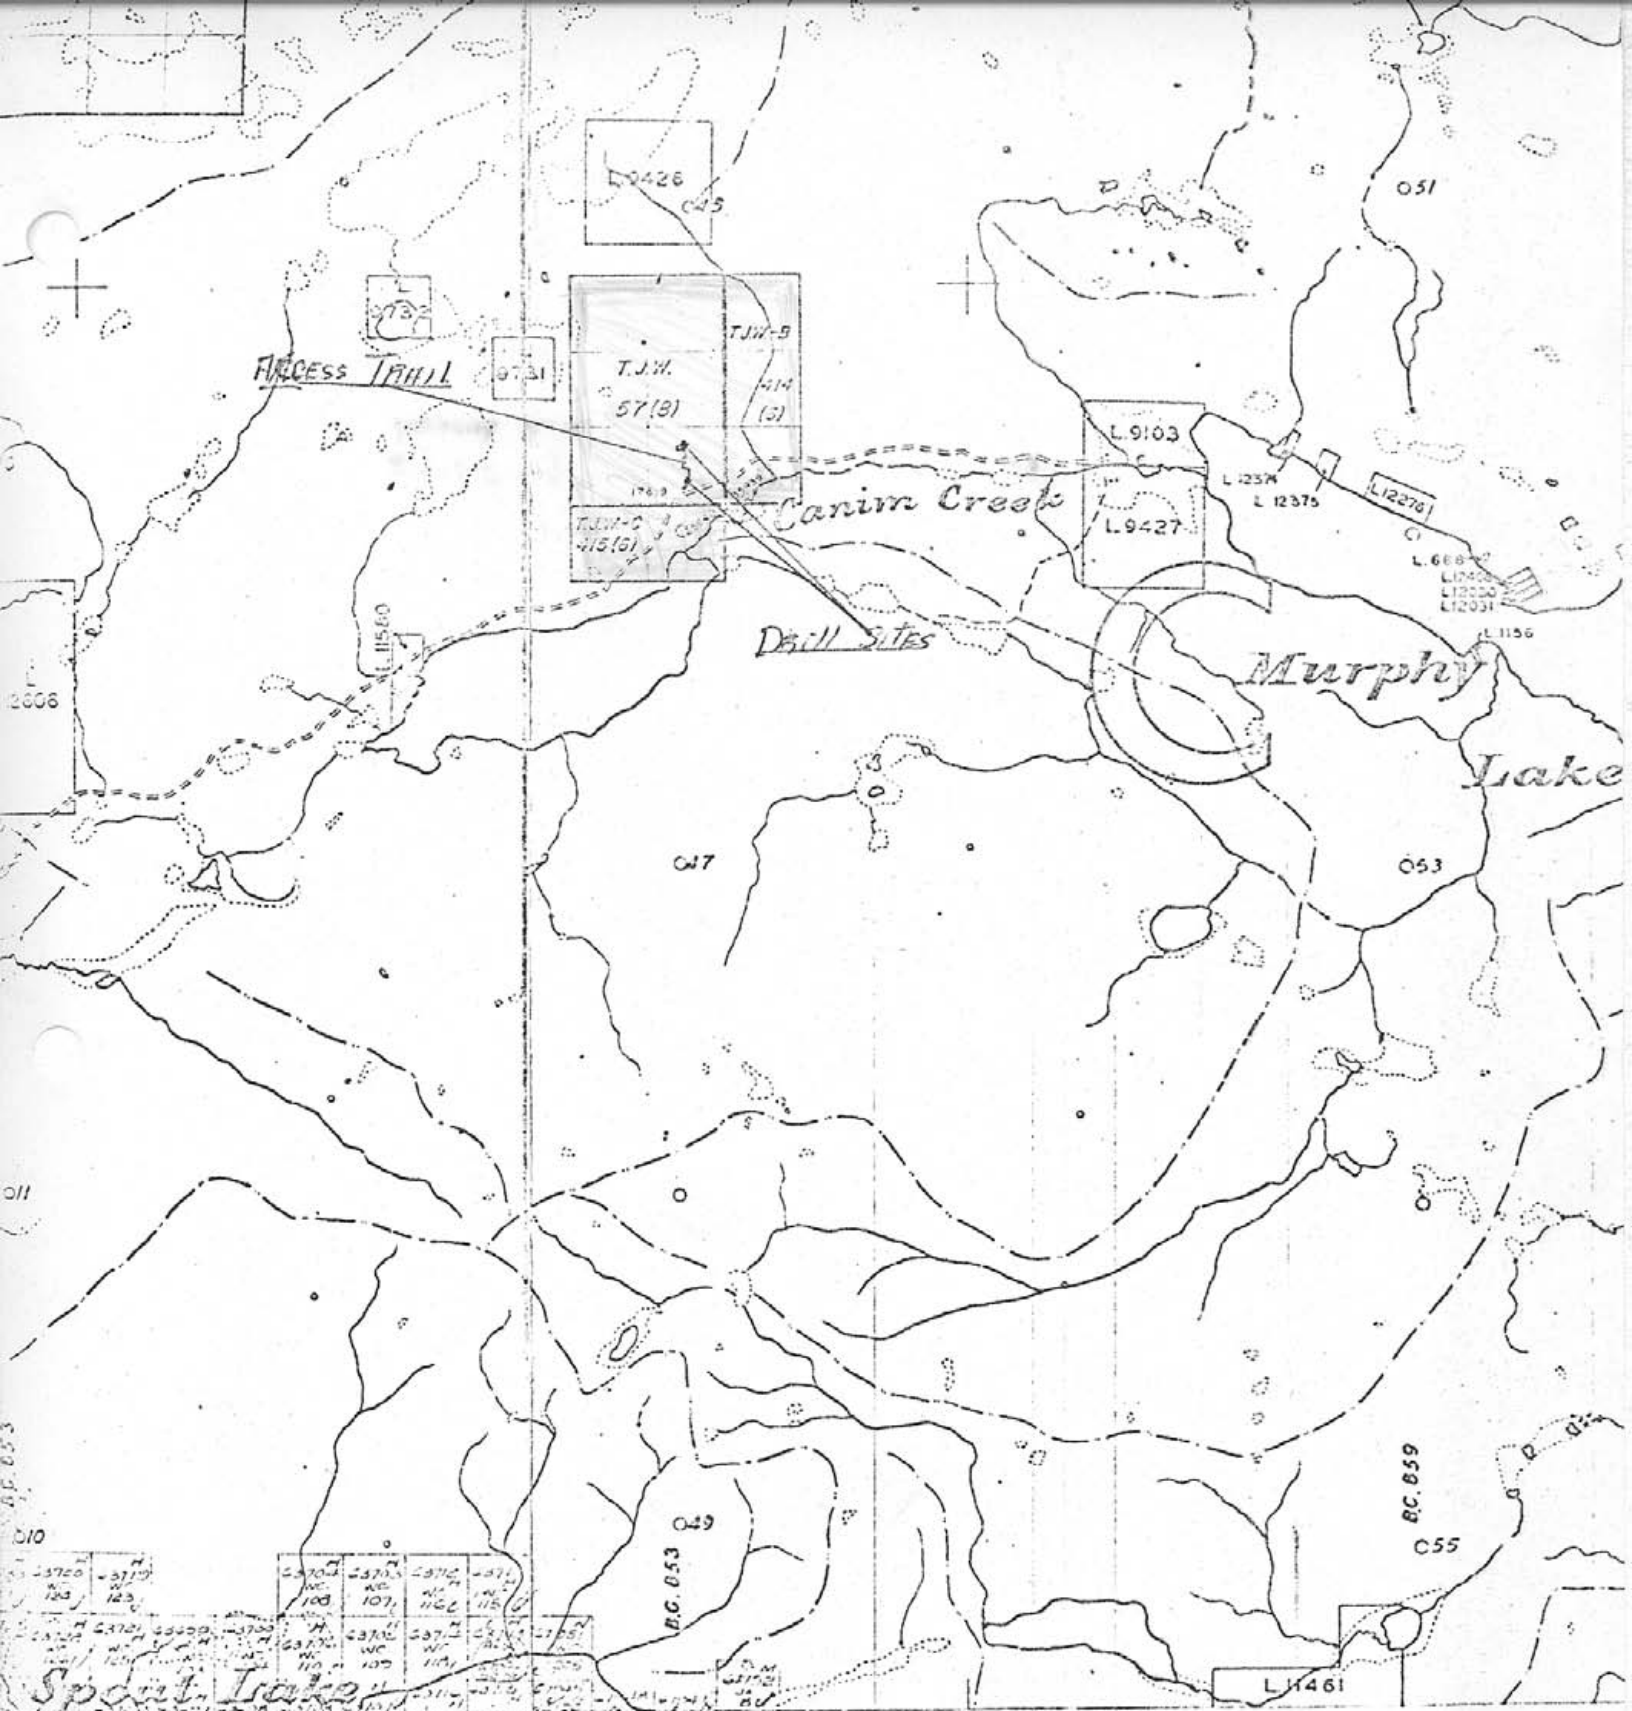

Concerning the question about drill core logs or similar description of Rock as per section (8) (2) $\phi d \phi$; as our core is from large boulders embeded in overburden through which we hope to go to bed rock, we do not see the point in having it logged.

I must admit that the calculation of the total depth drilled was wrong. It was a mistake in typing. When I put down 69 metres I meant 6.9 metres. However it really is 7.3 metres (24ft). This is shown on the work sheets which I have called out correctly.

Sincerely yours

Joseph Franks
