This addendum is a review of the recent diamond drilling work on the company's property and a recommendation for further work. It is made due to the success of the 1978 drilling of 1227 metres, involving an expenditure of \$90,000.00. In particular, DDH 78-6 had spectacular values of 0.864 oz. per ton in the original assay and 1.15 oz. per ton in the check assay done by Dr. R. H. Seraphim, Ph.D, P.Eng. These were over a length of 24 metres.

RECOMMENDATIONS

1. Establish a semi-permanent camp with trailers on a rental-purchase basis;
2. Expand the drilling program; use at least two machines:
 - (a) one machine working on a 300 metre grid to delimit the ore bearing area, including the "free" gold area to the north;
 - (b) one or more machines to detail drilling. Hole depths will average about 400 feet. The area to be drilled is that outlined in the maps contained in the writer's October 20, 1977 report, with maps based on the previous work done by Quintana Minerals.

SUMMARY

The 1978 drilling program of 1,022 metres in seven holes to date has expanded the mineralized zone to the east and south, with an apparent improvement in grade, and has not indicated any limits to the mineralized zone.

The program must be considered very successful.

Therefore it is recommended that drilling be continued to expand the zone, and to fill in between the north and south drilling.

It is also suggested that, if possible, the Company take action to acquire full title to the property, so that future payments, which will be very substantial, and onerous, will be eliminated.

Respectfully submitted,

A.F. Roberts, P.Eng.

INTRODUCTION

This report is authorized by the Directors of the Company.

Its purpose is, from personal examination of the hole locations, examination of the drill cores, and comparison with each other and their assays, and the work of others; to comment on the results, and if thought valid, make recommendations for future work.

The property was visited in the period October 24-26, 1978. Previous examinations were made, July 4-7, August 16-19, September 27 - October 1, 1977.^{1]}

1] Report by A.F. Roberts, P.Eng., October 20, 1977

DIAMOND DRILLING 2] 3] 4]

In the period, beginning of May 1978, to date, the following drill holes have been completed or are in progress:

| Hole No. | Length Metres | Assays in 2 metre sec. |
|-------------|-----------------------------|-------------------------|
| CC DDH 78-1 | 129 | No. 1 - 62 |

| 78-6 | 177 | 322 - Not complete |
| 78-7 | <u>192</u> | Not completed No assays |
| Total | <u>1,022 metres to date</u> | |

Locations are shown on the enclosed plan, but are subject to a transit survey.

The holes, 78-1, 2, 3, 4 are 40 metres east from the 1977 sections, and 78-5 is another 40 metres east of 78-2.

No. 78-6 is 240 metres southeasterly from hole 78-5.

No. 78-7 is 40 metres northeasterly from hole 78-6.

| 2] Drill Plan | [Envelope, end of Report] |
| 3] Logs DDH 6,7/78 - Appendix A | [End of Report] |
| 4] Assay Certificates - Appendix B | [End of Report] |

There is a difference of elevation between the collars of the 1977 holes and DDH 78-7 of approximately 45 metres.

Examination of cores shows a change in geology from west to east, from mostly rhyolite porphyry and argillite breccias, to a conglomerate of tuff and pebbles. There is insufficient information to correlate intersections across the property.

The pyrite was fracture filling, rims around pebbles, and fragments with some dissemination, or replacement.

Better sections to date in the 1978 drill program.

CONCLUSIONS

The 1978 drilling program is very encouraging. It has extended the area of mineralization to the east and south, and has not found the limits of mineralization.

RECOMMENDATION

The drilling program should be continued to fill in and expand the mineralized zone.

If financing is possible, it would be desirable to acquire full title to the property, and eliminate further onerous time payments.

Respectfully submitted,

A.F. Roberts, P.Eng.

This addendum is written at the request of the Directors of Consolidated Cinola Mines Ltd., and is a resume of the work to date.

Diamond drilling has begun on the property under the immediate direction of Mr. A. MacKillop, well known fieldmen, and prospector.

The first hole, DDH 78-1, is 40 meters east and 40 meters south of DDH 77-12, and has been completed to 430 feet where it entered the basement fault.

DDH 78-2 is 80 meters north of DDH 78-1, continuing the regular pattern, to the east and south, on a wider spacing, as recommended in the report of October 17, 1977, and is at 128 feet.

The core has not been logged, or assayed at this date.

Costs are estimated at \$22.00/foot, for a total of \$13,000.00 to date.

It is recommended that a further 2,000 feet of drilling be done, bringing total costs to \$60,000.00 for this stage.

If the grade stands up in these holes, then it is recommended that the program in the report of October 17, 1977 be completed.
