SUMMARY

The property lies in the Rocky Mountains of northern British Columbia between the Kwadacha and Akie Rivers. Devonian-Mississippian shales trend NW-SE. Following a stream silt sampling programme, ten claims (136 units) were staked to cover an area found to be geochemically anomalous with respect to zinc. Geological mapping and prospecting failed to discover mineralization. One hundred and seventy-one soil samples were taken along 22.4 km of line. No anomalous areas were outlined.

## 1. INTRODUCTION

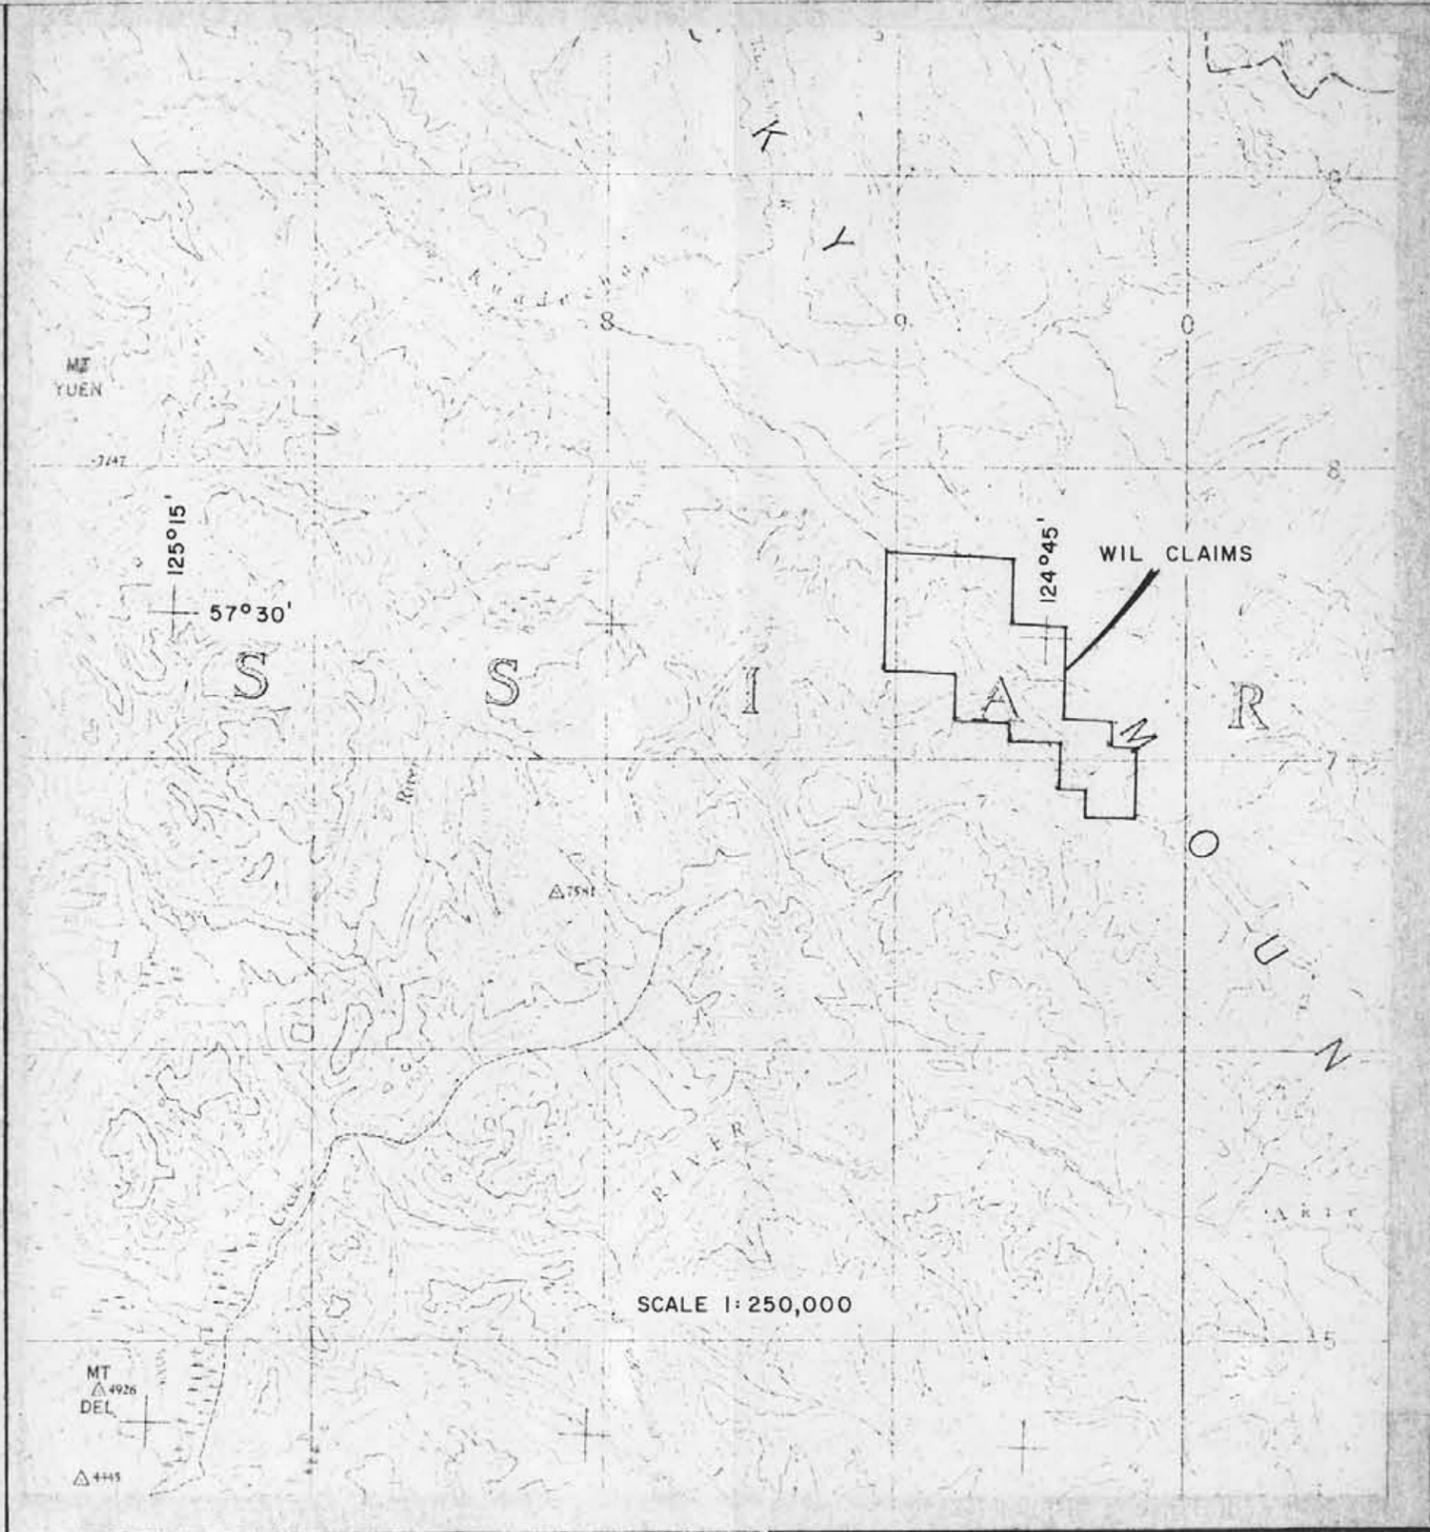

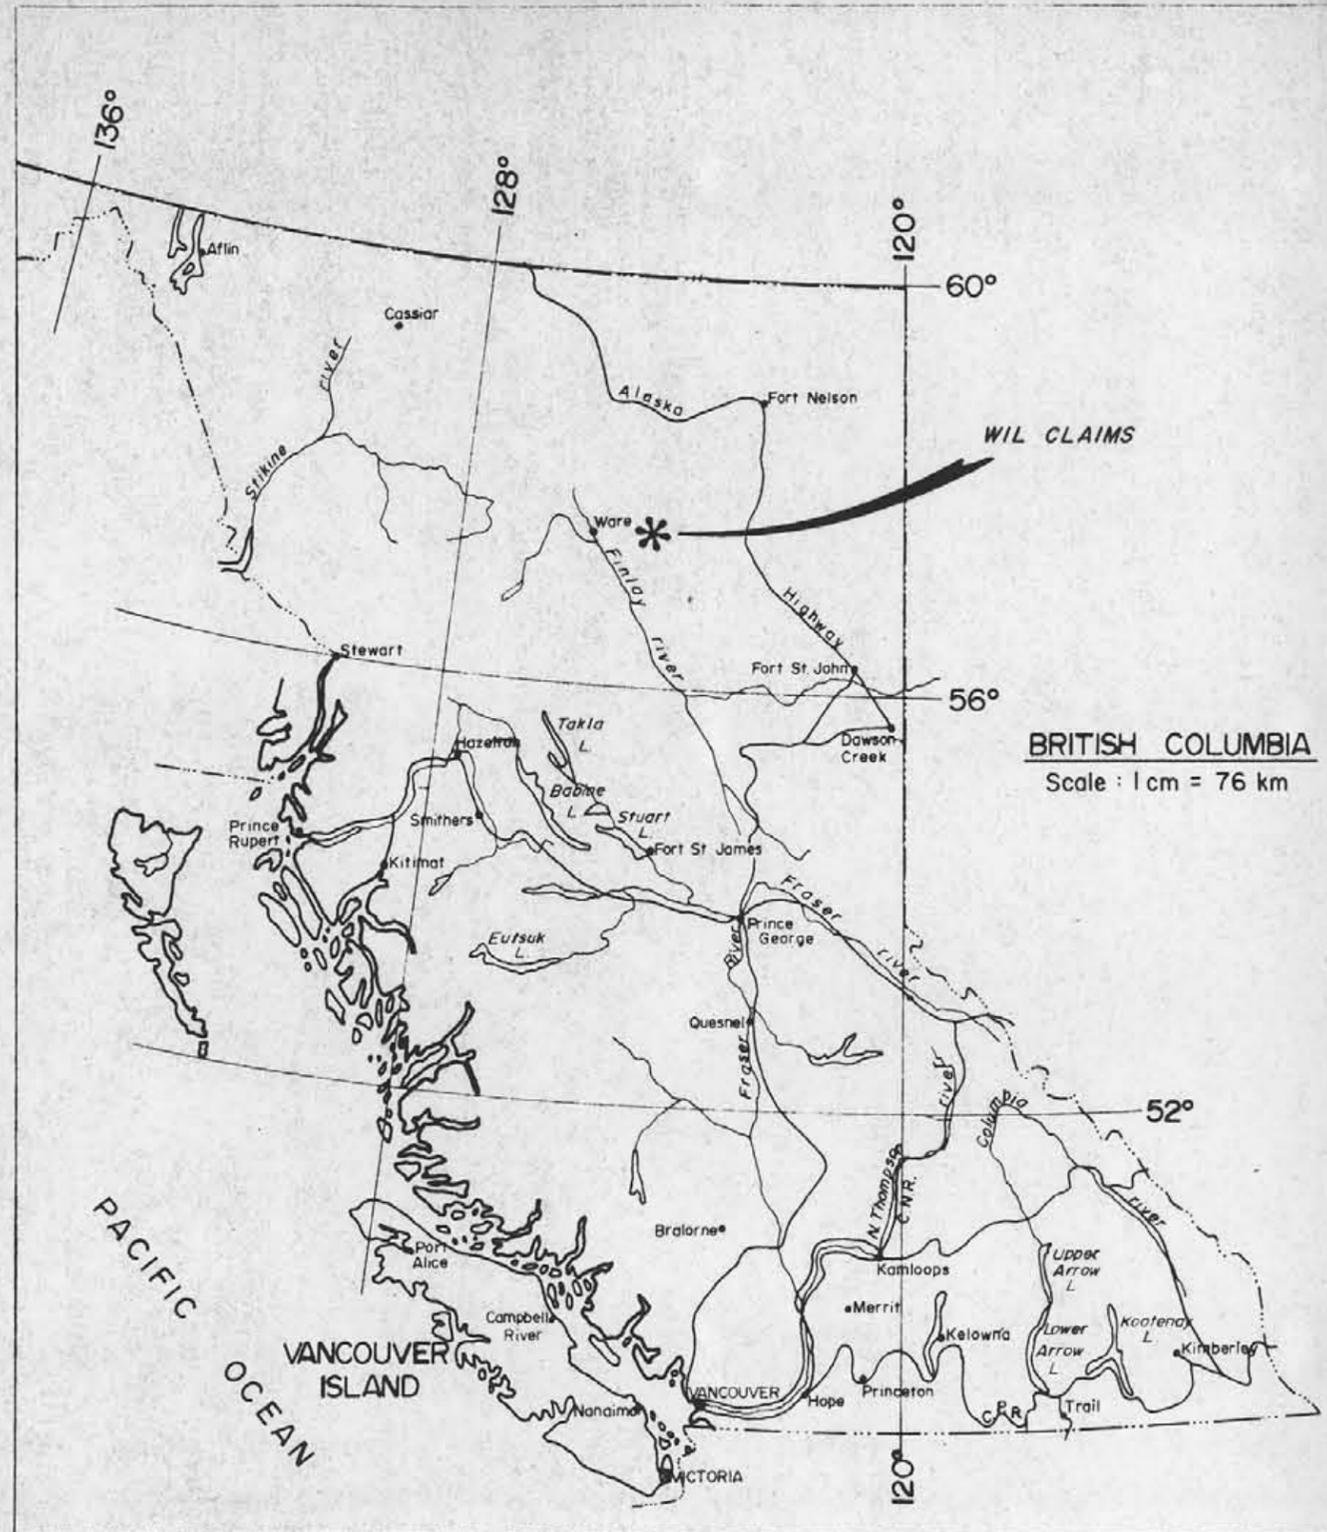

Devono-Mississippian black shales in northeastern British Columbia were thought to be southern equivalents of similar shales in the Yukon Territory and Mackenzie District, N.W.T., which host important deposits of lead and zinc. A regional reconnaissance programme that included geochemical stream silt sampling, geological mapping and prospecting confirmed that the black shales in northeastern British Columbia have economic potential and four groups of claims, including the WIL claims, were subsequently staked.

## 2. LOCATION AND ACCESS

The WIL claims lie north of Williston Lake in northern British Columbia (DWG. L-6562), approximately 300 km NW of Fort St. John, 200 km SW of Fort Nelson and 30 km east of the Indian settlement of Fort Ware. After spring breakup barges run to Deserters Canyon at the north end of the Lake. Fort Ware and Ingenika have gravel air strips. Access to the claims is by helicopter.

### 3. TOPOGRAPHY AND VEGETATION

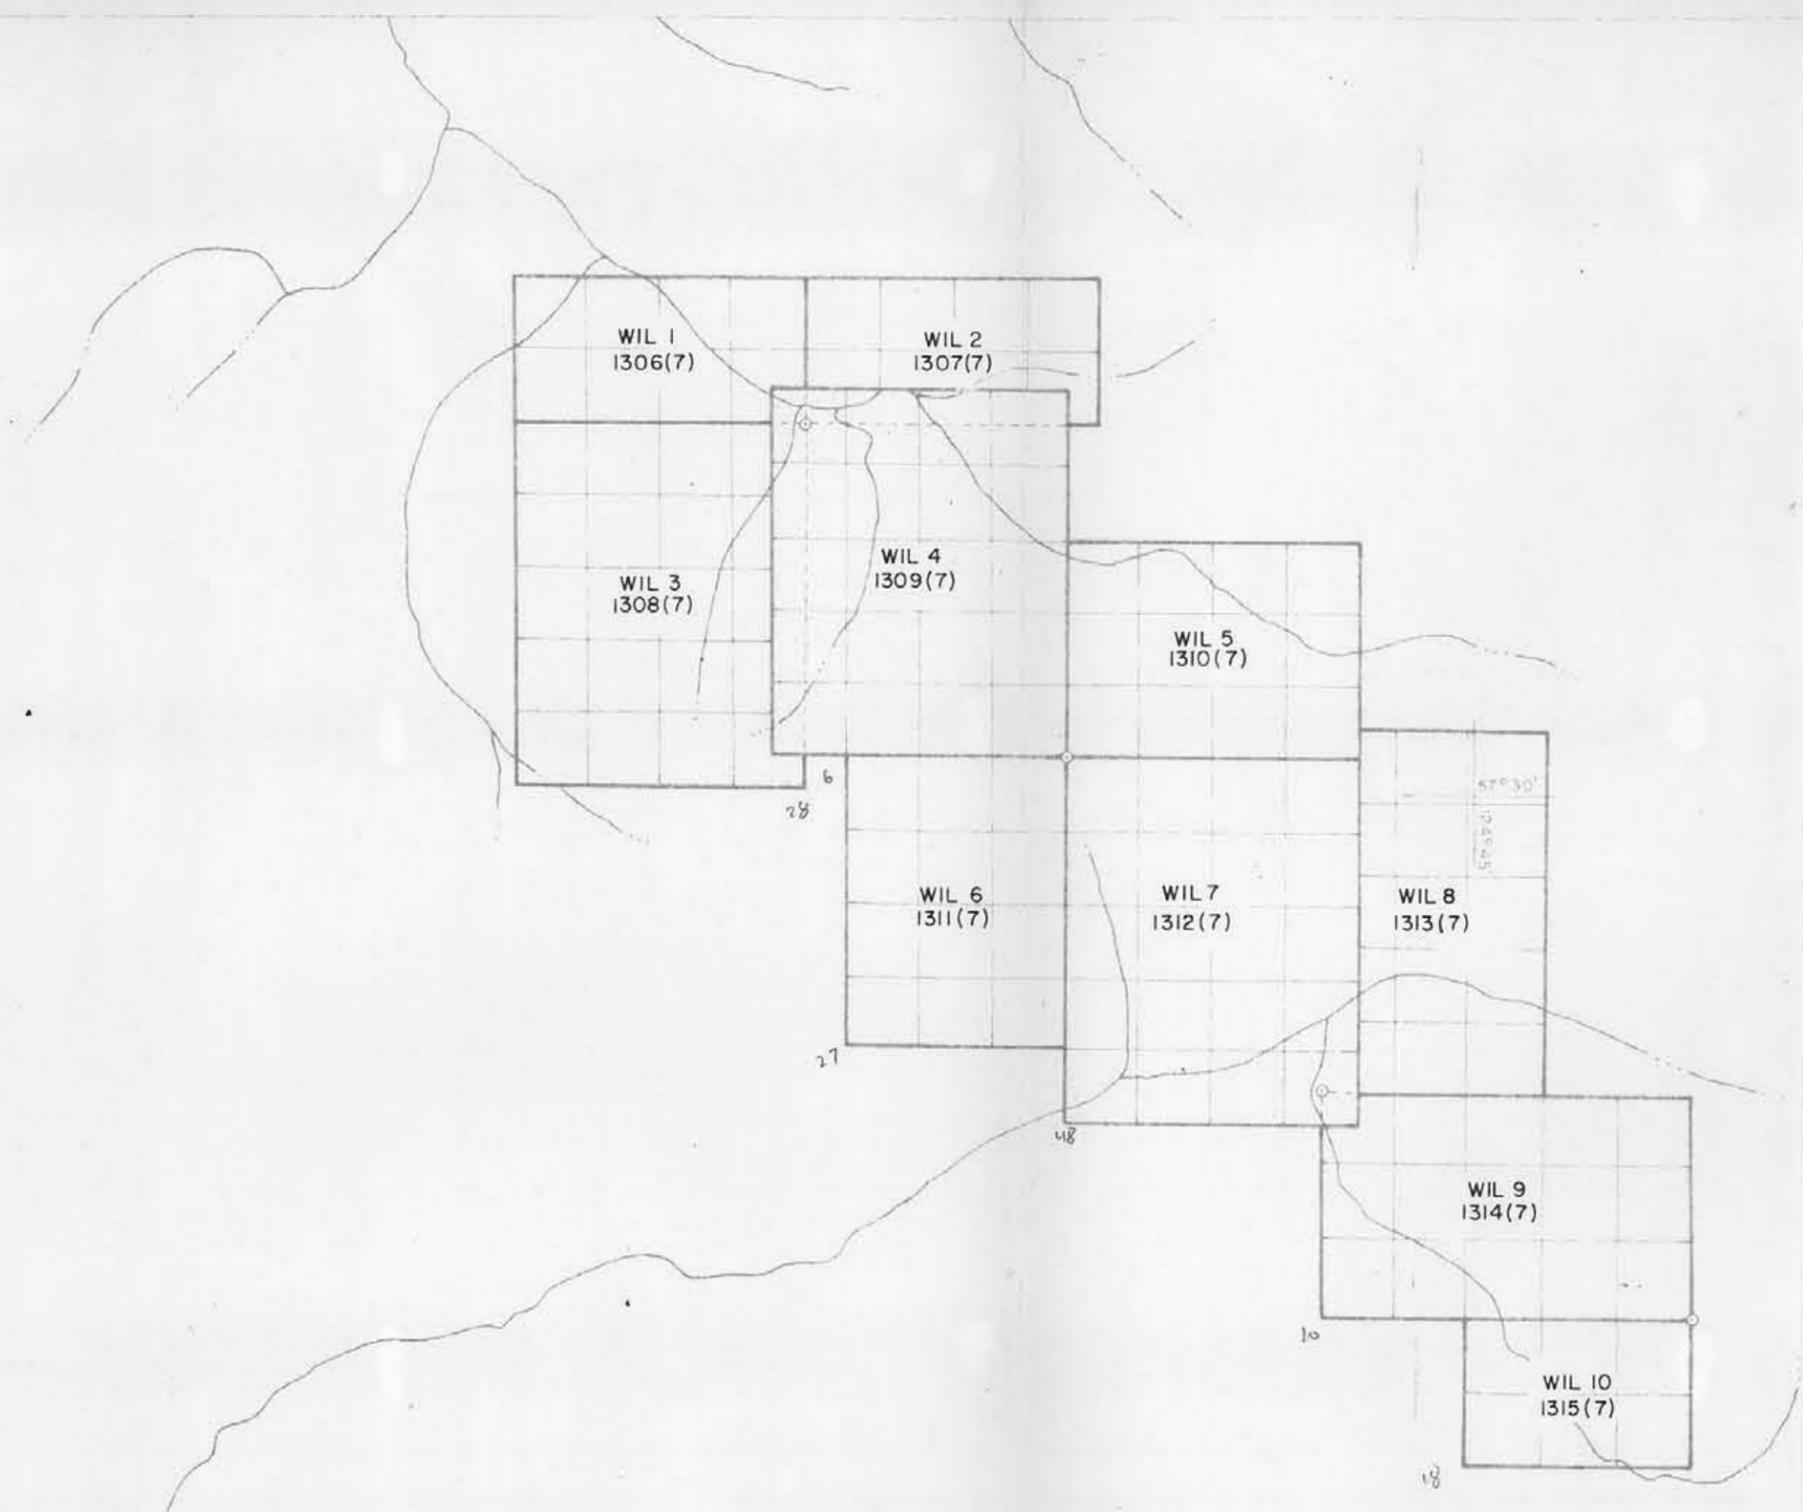

The area is mountainous. Elevations range between 1400 and 2300 m above sea level. Slopes are moderate to steep. Much of the claim block lies above tree line. Lower slopes and valley bottoms are covered in dense scrub.

### 4. HISTORY AND PREVIOUS WORK

None.

### 5. WORK PERFORMED IN 1978

The WIL claims (DWG. C-6554) were staked during a regional reconnaissance programme that included geological prospecting and stream silt sampling. The claims cover ground drained by creeks anomalously high in zinc. A geological map was made on a scale of 1:25,000. One hundred and seventy-one soil samples were taken, sample sites being 100 or 200 m apart, on sample lines every 1000 m.

## 6. PERSONS EMPLOYED

Field party chief C. Graf led a silt sampling team of six persons, and was responsible for the geological mapping and prospecting. Northern Mountain Helicopters Ltd., under contract to Riocanex, supplied helicopter support.

The programme was carried out under the general supervision of R. V. Longe, Riocanex District Geologist, B.C.

## 7. REGIONAL GEOLOGY

Devono-Mississippian black shales on the WIL claims are believed to be a southern extension of those in the Selwyn Basin (Yukon Territory and Mackenzie District, N.W.T.) where such shales contain important deposits of lead and zinc. These shales comprise part of a Paleozoic succession of shales, siltstones and carbonates that have been deformed by folding, faulting and thrusting. Tectonic elements trend NW-SE. Mapping has been by Gabrielse (1962,1977), Taylor and Stott (1973), Taylor (1979), and Graf (1979).

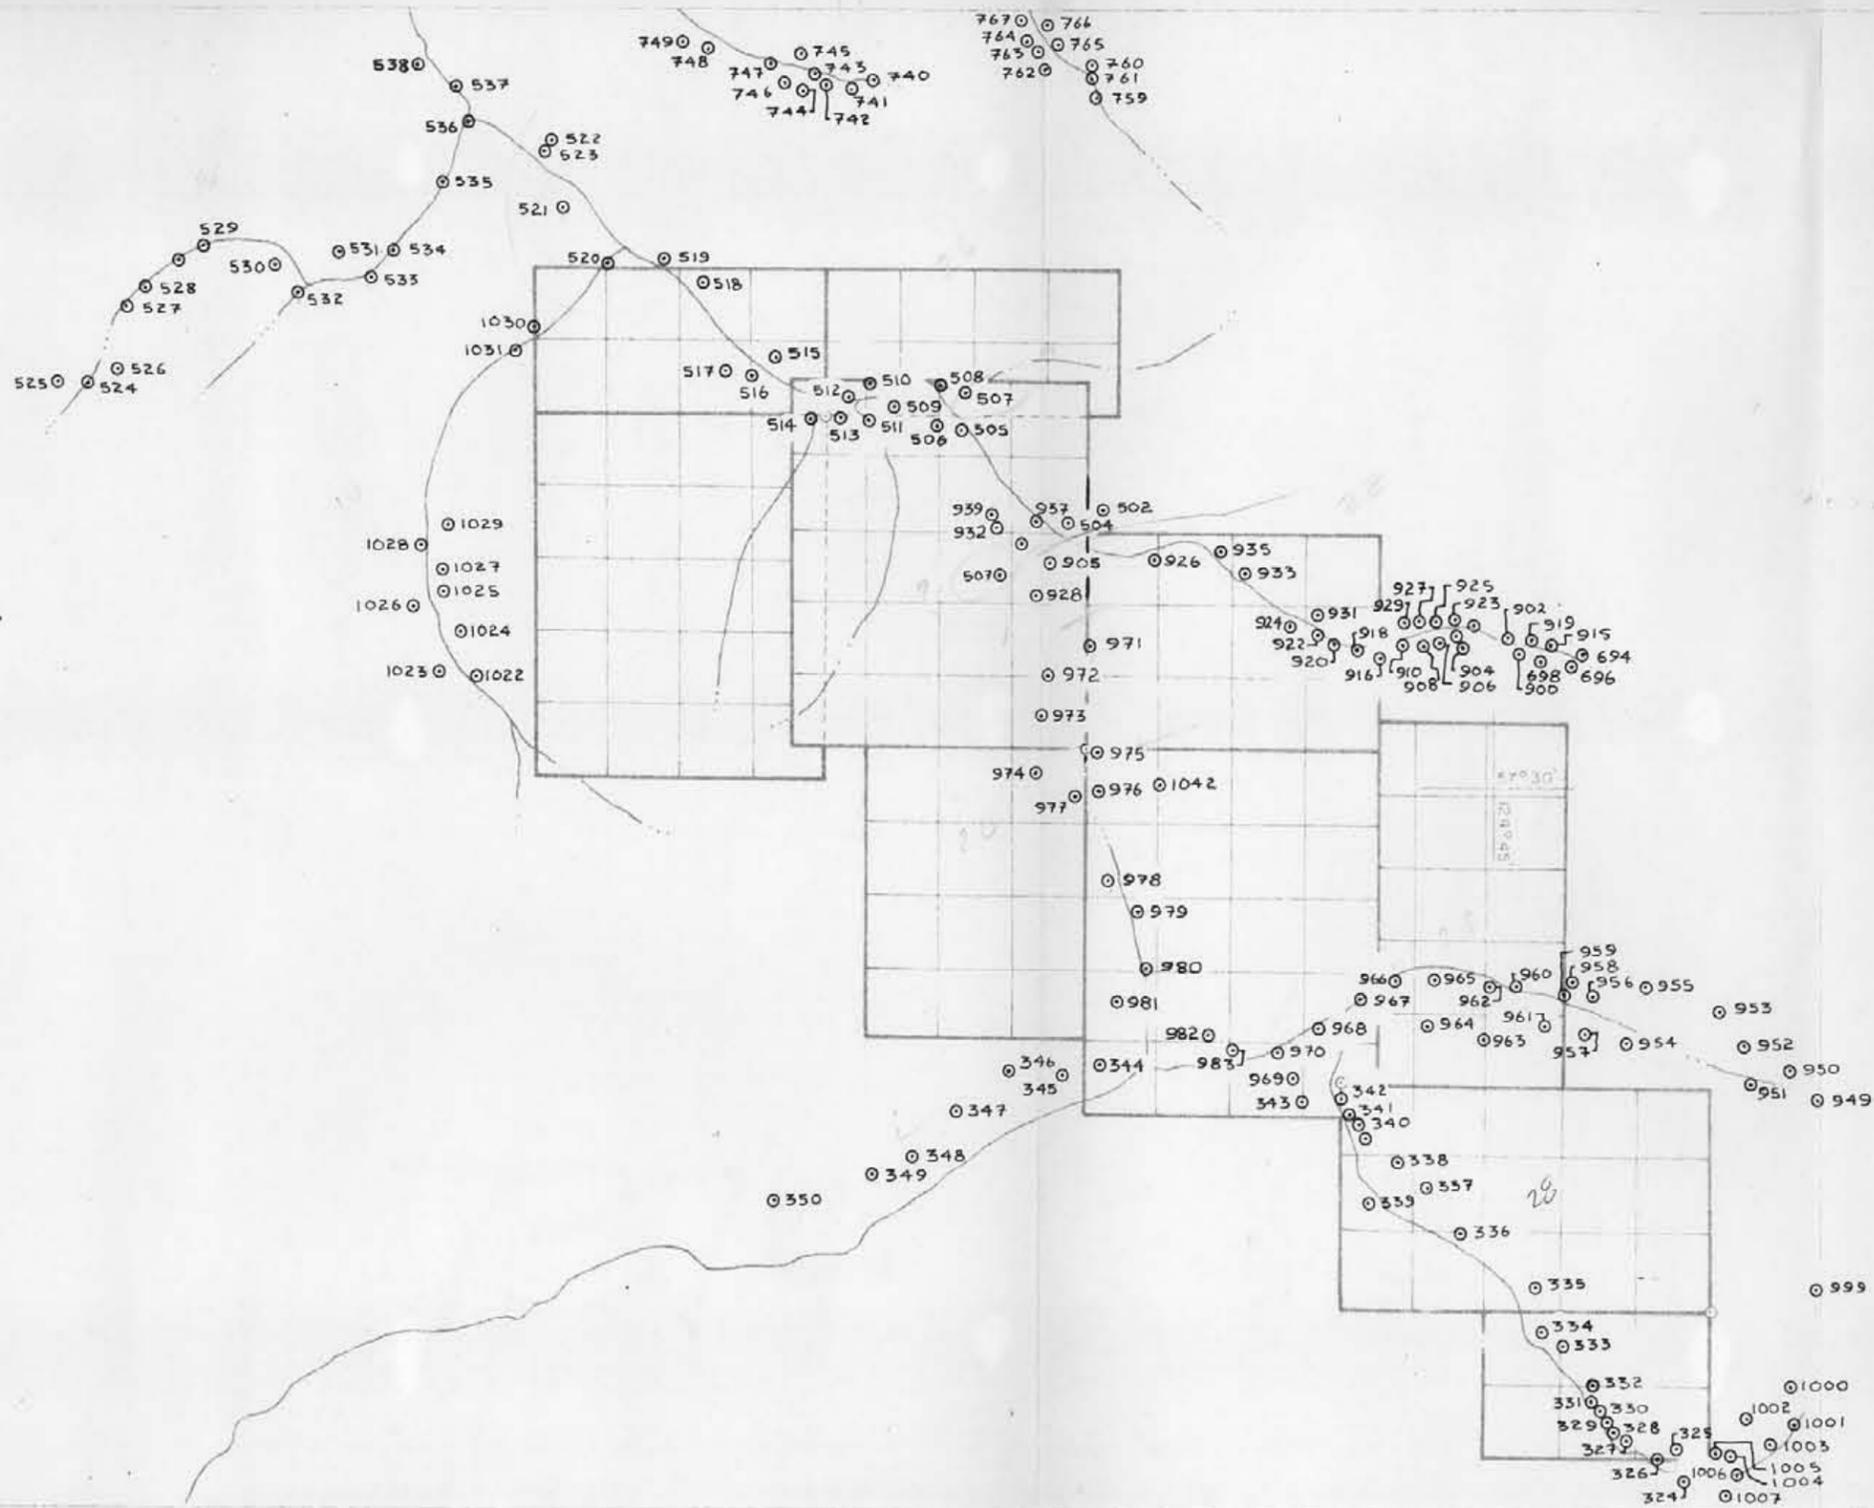

## 8. LOCAL GEOLOGY

The WIL claims are staked over part of an eastern belt of Devono-Mississippian shales. The shales occupy a NW-SE trending synclinal structure, flanked by Ordovician black shales and grey limestones. At least one major thrust fault has brought the older rocks up from the southwest. DWG. GC-8663 is a geological map of the WIL claims on a scale of 1:25,000.

## 9. GEOCHEMISTRY

Stream silt samples were taken from creeks draining the WIL claims. DWG. GC-6557 shows the location of sample sites, and the results are displayed in DWG. GC-6560. The claims were originally staked when high copper and zinc values were returned. Values in excess of 40 ppm Cu are considered to be anomalous and several samples contained more than 100 ppm Cu. Graf (1979) suggested the high copper values might reflect the proximity of thin volcanic units within nearby Road River rocks. Zinc values vary considerably but many are greater than 1000 ppm Zn and one returned 16,000 ppm Zn. Such zinc values are not considered to be significant. Only one silt sample in the area had anomalous lead (greater than 30 ppm Pb).

Locations and results of soil sampling are shown in DWG. GC-8663. Only one sample was anomalous in lead.

10. RESULTS

Neither sulphide mineralization nor bedded barite is known from the WIL claims and soil geochemistry is not encouraging.

11. CONCLUSIONS

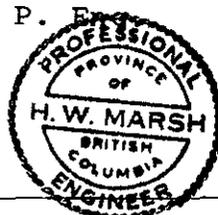

Results are discouraging. Background lead content in the shales is low and zinc is sporadic.

APPENDIX II  
COST STATEMENT

COST STATEMENT

B.C. SIKANNI AREA PROJECTS  
GEOLOGICAL, GEOCHEMICAL, & PROSPECTING  
9 MAY THROUGH 31 OCTOBER 1978

GENERAL COSTS

FOOD & ACCOMMODATION

9 Persons, 9 May-18 Sep, 765 Man Days \$12,751.00  
@ \$16.67/Man Day

RIOCANEX EQUIPMENT

765 Man Days @ \$3/Day 2,295.00

FIXED WING, DHC II,

10 May - 16 Sep @ \$1.75/Mile 24,968.00

HELICOPTERS, 206B

9 May - 24 Sep @ \$315/Hour 94,857.00

SUPPLIES

765 Man Days @ \$5.45/Man Day 4,173.00

FUEL, CAMP & HELICOPTERS

10,737.00

REPAIRS TO RIOCANEX EQUIPMENT

209.00

EXPEDITING SERVICES

9 May - 16 Sep, 130 Days @ \$13.88/Day 1,804.00

REPORT PREPARATION

1,235.00

GENERAL COSTS TOTAL

\$153,029.00

Cost Statement Cont'd

PROSPECTING

GENERAL COSTS

@ 32/765 \$ 6,401.00

SALARIES & WAGES

9 Persons 32 Man Days @ \$31.65/Man Day 1,012.80

BENEFITS

@ 25% of Above 253.20

ASSAYS

Riocanex Lab, 1 Rock Cu/Pb/Zn @ \$4.70	4.70	
Bondar-Clegg, 32 element Scan XRF	25.00	
13 Rocks, Ag/Cu/Pb/Zn @ \$20.50	266.50	
1 Rock, BA @ \$9.50	9.50	
1 Rock, Pb/Zn @ \$11.00	11.00	
1 Rock, Au @ \$8.50	8.50	325.00

PROSPECTING TOTAL

\$7,992.20

Cost Statement Cont'd

GEOCHEMICAL

GENERAL COSTS

@ 561/765 \$112,221.36

SALARIES & WAGES

9 Persons, 561 Man Days 17,755.65  
@ \$31.65/Man Day

BENEFITS

@ 25% of Above 4,438.91

GEOCHEMICAL ANALYSIS

Riocanex Lab, 3003 Soils, \$10,360.35

Cu/Pb/Zn @ \$3.45

Chemex Lab, 310 Soils, BA 930.00

@ \$3.00

Geochemical Supplies 822.00

Shipment of Samples Via C.P. Air 314.06 12,426.41

GEOCHEMICAL TOTAL

\$146,842.23

Cost Statement Cont'd

GEOLOGICAL

GENERAL COSTS

@ 64/765 \$12,802.42

SALARIES & WAGES

9 Persons, 64 Man Days @ \$31.65/Man Day 2,025.60

BENEFITS

@ 25% of Above 506.40

GEOLOGICAL TOTAL \$15,334.42

STAKING

GENERAL COSTS

@ 108/765 \$21,604.08

SALARIES & WAGES

9 Persons, 108 Man Days @ \$31.65 3,418.20

BENEFITS

@ 25% of Above 854.55

STAKING TOTAL \$25,876.83

GRAND TOTAL \$196,045.68

APPENDIX III  
CERTIFICATE

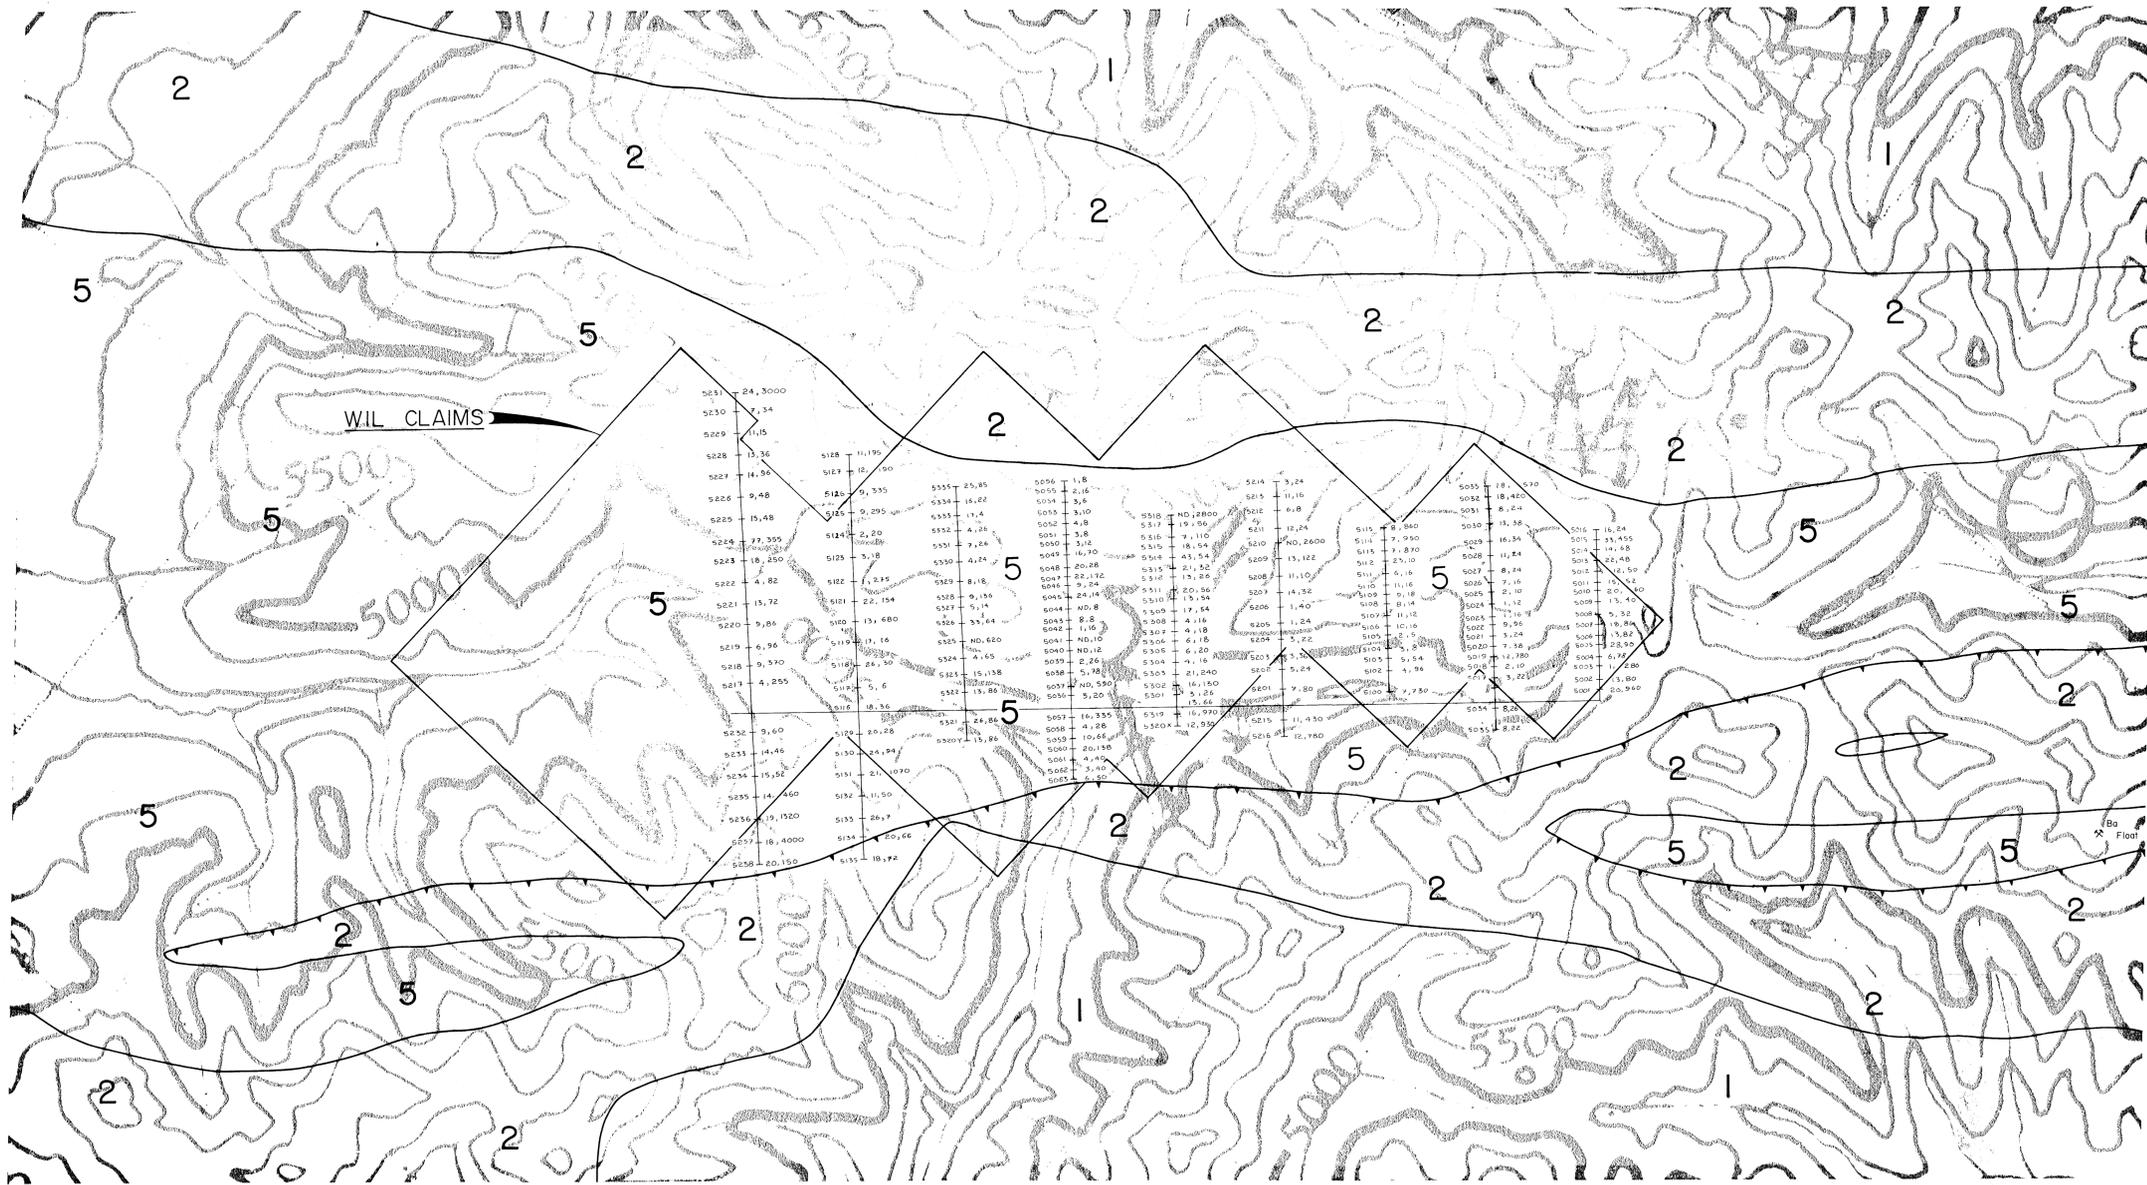

CERTIFICATE

I, Geoffrey David Hodgson, with business address in Vancouver, British Columbia, and residential address in North Vancouver, British Columbia, do hereby declare,

1. I am a geologist employed by Rio Tinto Canadian Exploration Limited.
2. I graduated from Exeter University, U.K., in 1972 with a BSc (Hons.) degree in geology.
3. I graduated from the University of Alberta in 1976 with an MSc degree in geology.
4. I am a Professional Geologist with the Association of Professional Engineers, Geologists and Geophysicists of Alberta.
5. From 1970 to 1979 I have been employed on both a temporary and full-time basis by the Geological Survey of Greenland, Research Council of Alberta, University of Alberta, Cominco Ltd., and Riocanex Limited.

Respectfully submitted,

G. D. Hodgson
