INTRODUCTION

This report contains the results obtained from 398.4 metres of NQ wireline diamond drilling completed July to September, 1980 by Richmond Diamond Drilling of Richmond British Columbia.

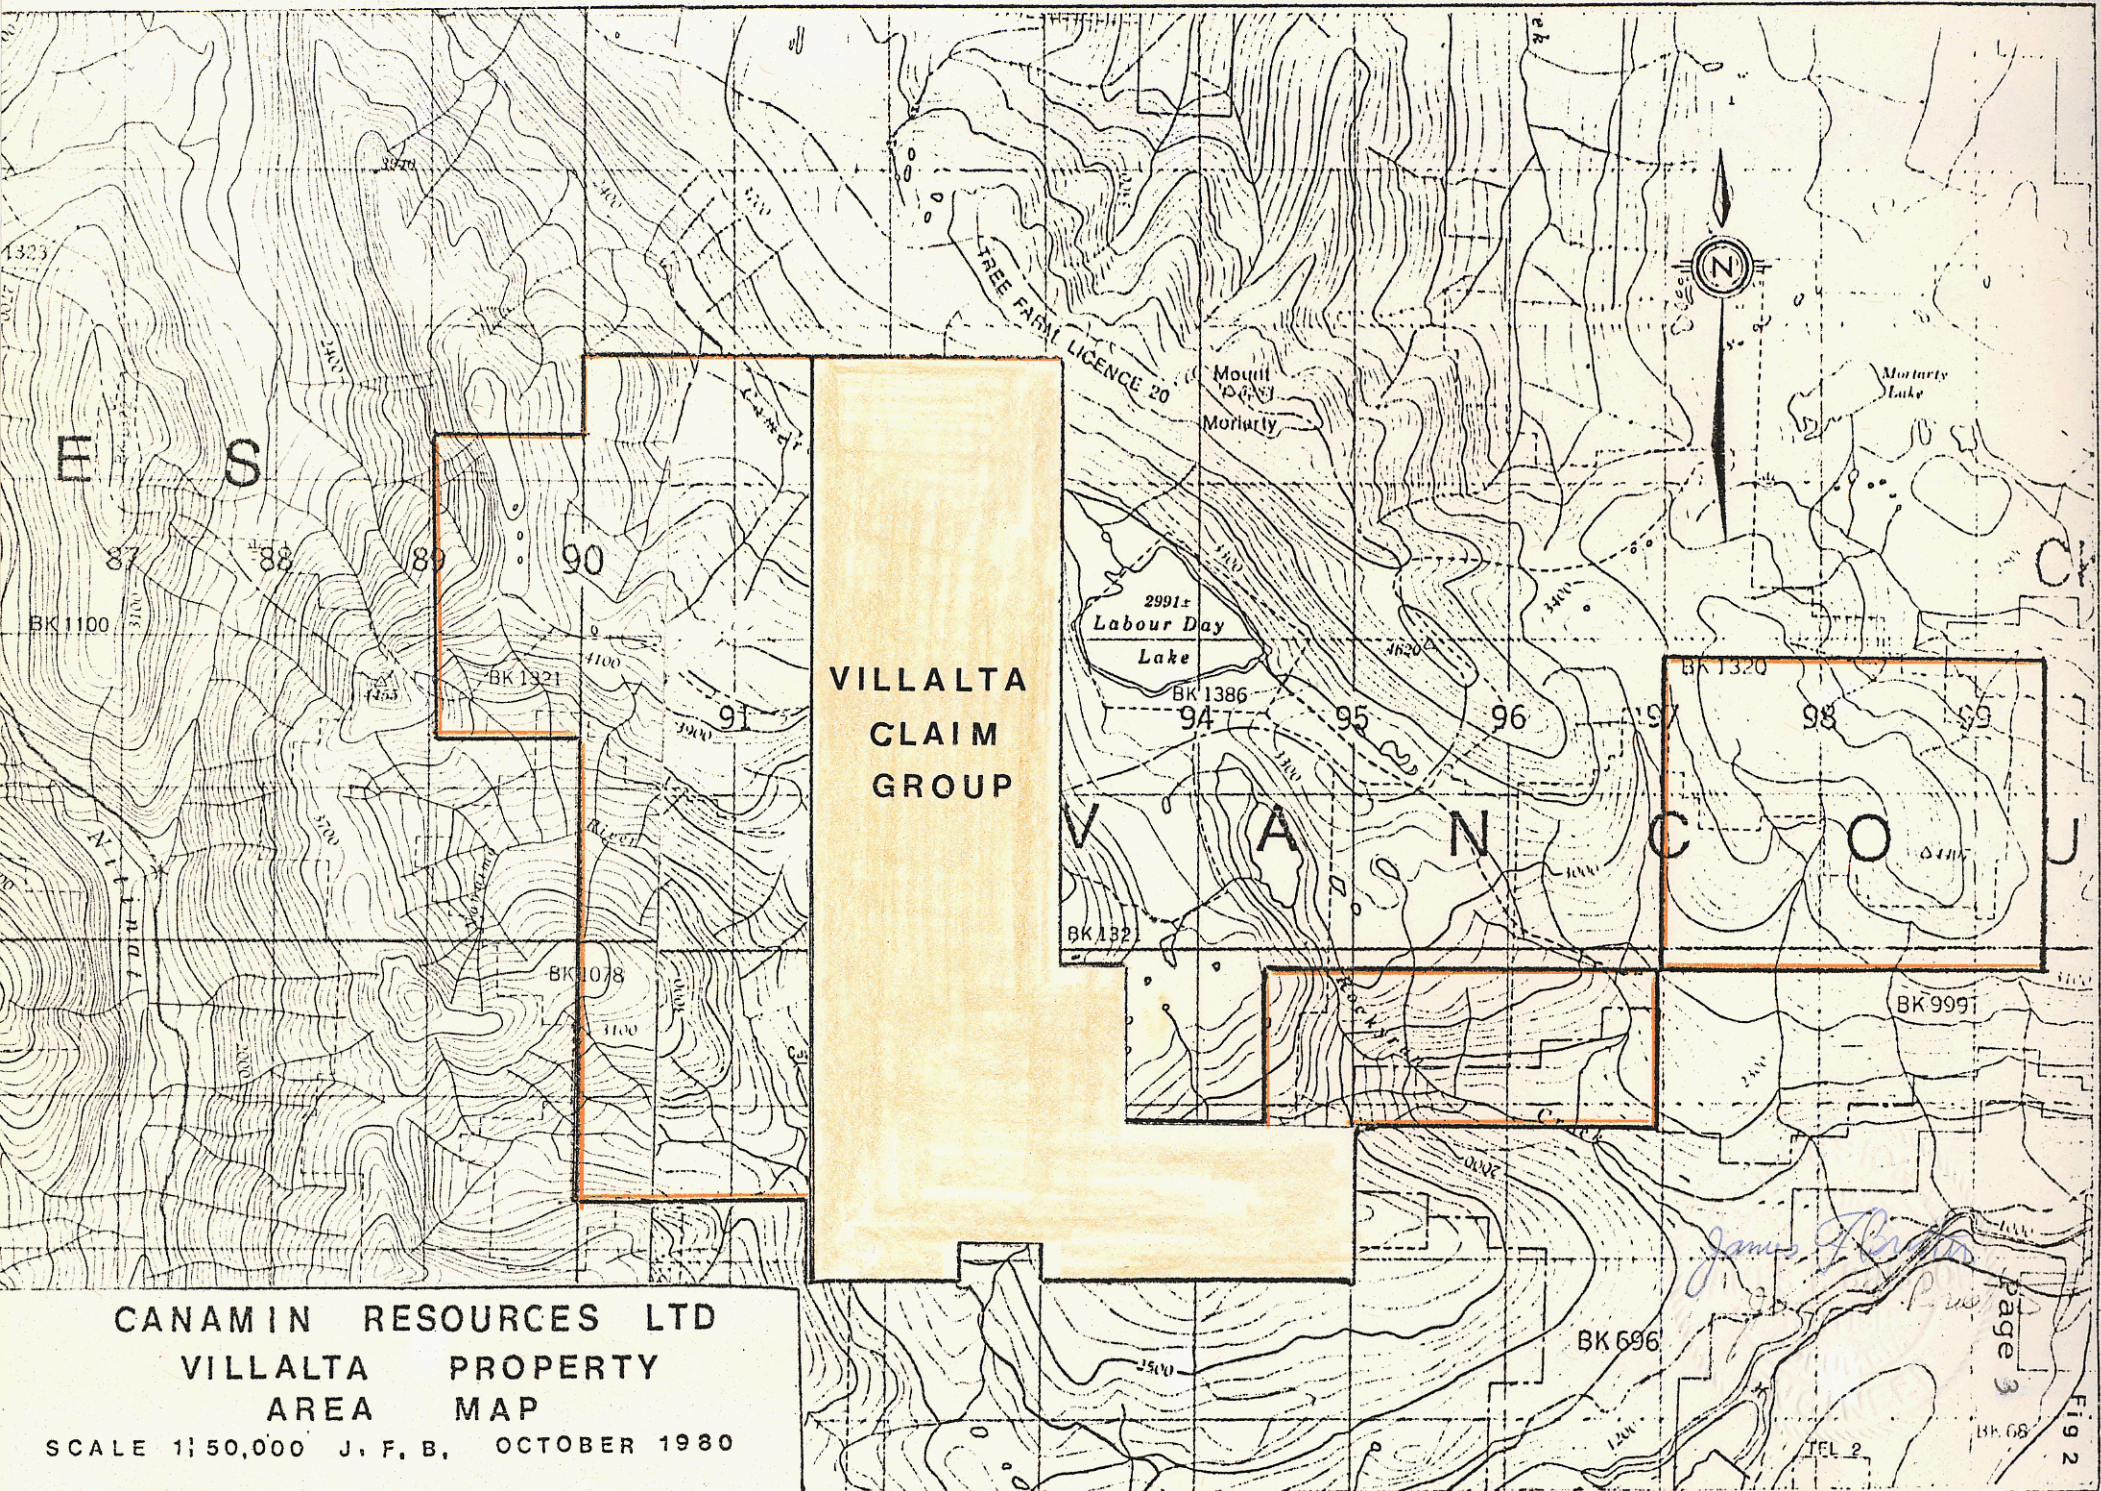

PROPERTY

The current Canamin Resources Ltd. property consists of 123 recorded claims. The drilling described herein was conducted on the Villalta A claim and is being applied to the Villalta Claim Group consisting of the following claims.

<u>Claim Name</u>	<u>Units</u>	<u>Record Date</u>	<u>Record Number</u>
W05	18	Dec. 31/79	501
Villalta	8	Sept. 15/76	105
Villalta A	2	Sept. 15/76	104
Villalta C	2	Jan. 10/77	133
Villalta D	2	Jan. 10/77	134
Wolfram 3	8	March 9/79	344
	<u>40 units</u>		

LOCATION AND ACCESS

The "Villalta Property" is situated approximately 5 kilometres north of Fourth Lake in the Nanaimo River drainage and 55 kilometres by road west of Cassidy, British Columbia. Of this distance, 27 kilometres are paved public road, 19 kilometres are paved logging road and 9 kilometres are all weather gravel logging road. The logging roads in the area are maintained by Crown Zellerbach Co. Ltd.

Fig. 3

TOPOGRAPHY AND CLIMATE

Topography on the property varies from moderate to rugged with elevations ranging from 640 m to 1348 m.

Most of the property is heavily forested with spruce, hemlock, fir, and cedar, all of commercial value. The area where drilling was conducted has been recently logged.

The climate is typical west coast rain forest with hot dry summers and cool wet winters. Snow fall is described as moderate, however, snow packs of up to 2.4 metres have been reported on the higher elevations.

HISTORY

There is no written record of early exploration work on the property. The area currently being diamond drilled was staked by Mr. E. Specogna in 1976.

DISCUSSION

The purpose of the six NQ wireline diamond drill holes were to further explore several gold bearing massive hematite outcrops found during past prospecting and recent logging road construction.

The hematite mineralization was found to vary from muddy to near massive. It appears to be related to the top of a medium grained, grey crinoidal limestone. The limestone has been tentatively identified as belonging to the Sicker Group. (Buttle Lake Formation?) The upper contact of the limestone appears to be an irregular karst land surface which in turn is overlain by conglomerate of the Nanaimo formation.

All six diamond drill holes drilled to date were drilled vertically. The collars were located with respect to a flagged grid and elevations were estimated using a Thommer Altimeter. This information was used to prepare a 1:1000 scale Diamond Drill Hole Plan. Three simplified drill sections have been constructed to illustrate rock types and geological setting.

The drill core is stored at the home of Mr. E. Specogna in Nanaimo, British Columbia and was logged by the writer.

COST STATEMENT

Diamond Drilling

Invoice 19 Aug./80	\$12,535.30

Report Submitted by:

JAMES F. BRISTOW, P. ENG.

VICTORIA, BRITISH COLUMBIA

NOVEMBER 1, 1980

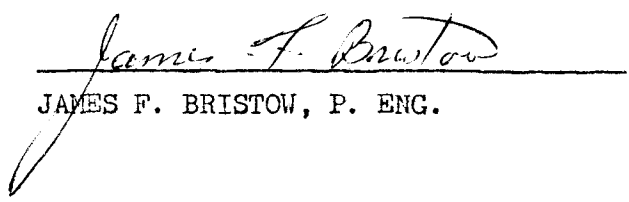

CERTIFICATION

I, James F. Bristow of 1840 Penshurst Road in the Municipality of Saanich, Province of British Columbia, hereby certify:

1. I am a graduate of the University of British Columbia with a B.A. degree (Geology and Physics).
2. I am a Professional Engineer registered in the Province of British Columbia.
3. I have actively practiced my profession in mineral exploration and mining geology since my graduation in 1957.
4. That this report is based on a personal examination of the Property and the diamond drill core from diamond drill holes 80-V-1 to 80-V-6, inclusive.
5. That I have no interest, either direct or indirect, in the property or securities of Canamin Resources Ltd., nor do I expect to receive any.

Dated at VICTORIA, BRITISH COLUMBIA this 1st day of NOVEMBER, 1980.

JAMES F. BRISTOW, P. ENG.

James F. Bristow

METERAGE

DESCRIPTION

0 - 3.66 (12)*	Chert - broken, oxidized, contorted, white to grey with limonite on fractures - partially brecciated.
3.66 - 5.79 (19)	Conglomerate (Nanaimo?) partially brecciated deformed, well fractured.
5.79 - 8.38 (27.5)	Altered dyke - highly deformed telcase zone, whitish grey in colour - greasy feel.
8.38 - 8.84 (29)	Lamprophyre dyke. Lower contact 40° to CA.
8.84 - 11.13 (36.5)	Conglomerate (Nanaimo?) very deformed to undeformed, heavy alteration 9.45 (31) to 11.13 (36.5) silicification, limonite and pyrite.
11.13 - 44.20 (145)	Limestone - partially recrystallized marble
11.76 (38.6) - 11.89 (39)	chert
15.55 (51) - 15.70 (51.5)	pyrite
16.46 (54) - 18.59 (61)	generally massive pyrite with some chalcopyrite
16.46 contact 70° to CA	
18.59 contact uneven	
19.66 (64.5) - 19.81 (65)	patchy pyrite
23.16 (76) - 29.26 (96)	cherty lenses
30.78 (101) - 36.88 (121)	vuggy with replacement by travertine
33.53 (110) - 36.88 (121)	appears brecciated
42.67 (140) - 43.00 (141)	patchy pyrite with some visible chalcopyrite

* - feet

JFB

44.20 - 44.81 (147)

massive pyrite

44.81 - 47.55 (156)

Feldspar porphyry dyke contains
bleached and altered fragments

44.81 (147) - 45.57 (149.5)

47.24 (155) - 47.55 (156)

47.55 - 52.12 (171)

Siliceous Siltstone - buff and dark,
very fine grained - banding were
visible 45° to CA, often brecciated
and contorted, minor pyrite and
hematite along some fractures

Drill hole ends at 21.64

METERAGE

DESCRIPTION

0 - 34.75 (114.0)*

Conglomerate, Nanaimo formation.
Hematitic matrix with occasional green chloritic bleb.

1.22 (4.0) - 2.13 (7.0)

2.74 (9.0) - 3.66 (12.0)

4.27 (14.0) - 5.18 (17.0)

7.32 (24.0) - 7.62 (25)

11.58 (38.0) - 11.73 (38.5)

25.36 (83.2) - 26.67 (87.5)

30.78 (101) - 32.46 (106.5)

13.41 (44) to 18.59 mainly fine grained black slaty sediment (?); badly fractured with vague banding at 80° to CA.

34.75 - 39.01 (128)

Mud like hematite, occasional erratic pebble sheared (?) at 70° to CA.

39.01 - 39.32 (129)

Hematitic sediment (?); possible a near massive hematite sheared - mainly rubble.

39.32 - 50.60 (166)

Volcanic sediment; fine grained, crushed, brecciated and altered; irregular calcite zones. Minor hematite in matrix 39.32 (129) - 45.11 (148)

Core cut and polished 46.33 (152) -

46.63 (153), reported to contain native copper and chalcocite in matrix.

50.60 - 55.99 (183.7)

Mineralized Zone
contorted, brecciated massive hematite with very fine grained pyrite and minor magnetite and/or phrrhotite
- irregular blebs calcite.

* - feet

JFB

55.99 - 59.14 (196)

Altered mineralized zone
55.99 (183) - 56.24 (184.5) Limestone

59.14 - 96.32 (316)

Limestone, grey fine grained
59.14 (196) - 59.89 (196.5) vuggy -
oxidized pyrite
80.77 (265) - 81.82 (266) contorted -
massive patchy sulphides composed of
pyrite pyrrhotite and minor chalcopyrite
gypsum lenses and veinlets
88.70 (291) - 89.00 (292)
89.31 (293) - 89.61 (294)
89.92 (295) - 90.07 (295.5)
92.66 (304)
93.88 (308)
94.79 (311) - 95.10 (312)

Diamond Drill Hole Ends at 96.32 metres.
