Introduction

1. Location and Access

The Millie Mack Property is situated on Blue Grouse Mountain approximately 16 kilometers East of Burton (Fig. 1) - a town located on Highway 6, 38 kilometers South of Nakusp, B.C.

A gravel road along the North side of Caribou Creek, 24 kilometers long leads to the property. The last six kilometers of road switch back steeply up the South slope of Blue Grouse Mountain to the main workings lying at approximately 2100 meters.

2. Property Definition

The Millie Mack Property comprises nine Crown Granted Mineral Claims and fractions plus six staked mineral claims totalling 105 units, encompassing approximately 2650 hectares. (Fig. 2).

Crown Granted Mineral Claims

<u>Claim Name</u>	<u>District Lot Number</u>
Triumph Crown Grant	4194
Wolf Crown Grant	1830
Inpregnable Crown Grant	4195
Rainbow Crown Grant	4193
Gold Ring Crown Grant	1828
Millie Mack Crown Grant	1831
Black Bear Fr. Crown Grant	14850
H.E.F. Crown Grant	14849
Great Western Crown Grant	2200

Crown Granted Mineral Claims are registered in the Nelson Land Registry.

<u>Claim Name</u>	<u>Number Units</u>	<u>Record No.</u>
BWS	20	1188
LMS	10	1189
DLS	20	1190
LAS	20	1191

These claims are located in the Slocan Mining Division and are recorded at Kaslo, B.C.

N.T.S. reference maps for the above mineral claim are 82K/4E (M) and 82k/4W (M).

Mineral exploration was initiated in the Millie Mack Crown Grant area about 1895, leading to the early location of the above mentioned nine Crown Grants. A brief review of the early history shows:

1. Acquisition by Kamloops Gold Mining and Development Co. with some shipments starting in 1899.
2. Property was purchased by H. Forster who carried out intermittent development over the next 30 years. Approximately 800 meters of drifting and raising was carried out. According to Mr. Forster's report 450 tons were produced grading as follows:

Au 1.02 oz/t; Ag 100 oz/t; Pb 8%/t; Zn 7%/t.

In 1960, there is a recorded production of 13.9 tons grading:

Au 0.44 oz/t; Ag 9.8 oz/t; 3.7% combined Pb Zn/t.

In 1967, Richwood Silver acquired the property and carried an exploration program covering geological mapping, bulldozer trenching, channel sampling of trenches, and dump samples. Richwood Silver shipped 24.4 tons grading:

Au 0.22 oz/t; Ag 9.0 oz/t; 3.3% combined Pb Zn/t.

Geophysical and geochemical surveys were carried over the Crown Grants and a portion of the RWS and WDS claims in 1971 and 1972.

In 1979, Messrs. Craik and Smith of Kelowna, B.C. operated a trommel - jig, and produced approximately 80 tons grading:

Au 0.22 oz/t; Ag 8.4 oz/t; Pb 1.24%/t; Zn 0.86%/t; SiO₂ 61%/t.

GEOLOGY

The top of Blue Grouse Mountain is composed of an isolated pendant of pelites and argillite of the lower Slocan Group. Faulted and sheared sequences of graphitic argillite and schist at the base of this pendant, overlies a footwall of andesite/dacite have been mapped as part of the Rossland Group Volcanics and are considered to be lower Jurassic and Triassic Age. Mineralization occurs in the graphitic argillite/schist. Repeated movements have reduced the original quartz veins carrying galena and sphalerite to material varying from microscopic grains to boulders several tons in size. Boulders and footwall show slicken sides and rounding from the repeated movements. Distribution of the mineralization throughout the graphitic schist varying three to ten meters in thickness is erratic and presents a difficult sampling problem.

Sufficient exploration work and sampling have not been performed in order to arrive at a grade and tonnage.

1. Physical Work

The purpose of new road work and re-grading portions of old road was to:

a) Eliminate steep grades and provide better switchbacks to move equipment or haul out ore for testing, and to provide access to new drill sites. During the course of this construction the following equipment was used: D6C; D8H bulldozer; Road grader Galion C160; John Deere Backhoe; Dump truck; Airtrack, and John Deere log skidder. Re-grading over eight kms. of old road was carried out. New grades of approximately seven kms. were constructed. Logs were skidded to cold decks.

Map showing road is provided (in pocket). Fig. 2.

Road was constructed to a ten meter right of way with a five to six meter road bed. Length is approximately seven kms. An airtrack was used to drill all rock cuts for blasting. Approximately 350 meters of rock work was encountered resulting in the removal of approximately 1700 cu. meters of rock.
Fig.

Existing roads were re-graded using a D6C, D8H bulldozer. A Galion C160 grader ditched and re-graded after bulldozing.

b) Cost statements are as follows:

- i) D6C Cat. Owner-operator: Harold Command,
Nakusp, B.C. September, 1980 to October 24,
1980.
