ADDENDUM A-1

ADDENDUM TO MARGIE CLAIMS DRILLING & LINES REPORT

The following is a description of the rock formations of percussion drilling on the Margie Claim No. 752(12) in the New Westminster Mining Division of British Columbia.

TRENCH #2

The rock formation for Holes 1 to 14, inclusive, and 22 to 25, inclusive, was quartz.

The rock formation for Holes 19, 20 and 21 was an andesite.

The rock formation for Holes 15 to 18 was a dark green volcanic breccia and the rock formation for Holes 26 and 27 was an altered cherty-rhyolite.

TRENCH #1

The rock formation for Holes 1 and 2 was a dark green volcanic breccia.

PROPERTY

The Margie Claim 752 (12) consisting of 12 units, in the New Westminster Mining Division of British Columbia.

LOCATION

The claim is some 4 km by road north of Hope, British Columbia at $121^{\circ} 26' W$ Longitude, $49^{\circ} 25' N$ Latitude, on the west side of the Fraser River.

ACCESS

Access is some 4 km north on the Trans Canada Highway with the highway straddling the claim. The main showings are on the east side of the road.

WORK PROGRAM

The work program consisted of:

- 1) 3,000 meters of lines
- 2) 29 line percussion drill holes.

1. LINES

The lines consisted of two base lines in an east and north direction from the south-west corner of the claim. These lines measure 3,000 meters and are flagged and marked in preparation to set up a property grid for surveys control.

2. DRILLING

The geochemical sampling of the drill holes indicate higher values of Cu, Mo, Pb, Zn, Ag and Au, mainly in three groups of samples in the trench 2 area in samples 1 to 6, 9 to 14, and 22 to 27. These values are associated with quartz and silicified rocks.

The drilling consisted of 29 percussion vertical drill holes 5 feet (1.6 m.) deep drilled in the area of two trenches. Plate II and Plate III.

Two holes were drilled in the No. 1 Trench area. These are numbered Trench 1 - Holes 1 and 2. Plate II.

There were 27 holes drilled in the No. 2 Trench area. Plate III.

These are numbered Trench 2 holes 1 to 27 inclusive.

The cuttings from each percussion drill hole was assayed by geochemical analysis by Chemex Labs of North Vancouver, B.C. for Cu, Mo, Pb, Zn, Ag and Au.

The location of the drill holes are shown on the attached drill plans. Plate II and Plate III. The geochemical assay results are recorded on the Chemex Lab Certificate of Analysis report dated December 5th, 1980 attached.
