SKYROCKET WORK EVALUATION FOR ASSESSMENT PURPOSES

General Nature of Report: Work Evaluation
Specific Claims Involved: Sky 101 and Sky 102
Mining Division: New Westminster, B.C.
Specific NTS Location: M-92G-8 West
Latitude and Longitude: 49°15 and 122°30
Owner of Claims: Skyrocket Exploration & Resources Inc.
Operator: Skyrocket Exploration & Resources Inc.
Consultant: John Poloni
Authors of Report: Arne Sanders
Date Submitted: May 11, 1981.

Suite 116, 4777-55B St.

INTRODUCTION

- (1) The general geographic and physiographic position of the claims, Sky 101 and Sky 102, is approximately 8 miles north of Stave Falls at Dewdney Trunk Road. They are situated on Mount Crickmer between Alouette and Stave Lakes. Access to the claims is by West Stave Lake Road, running into Dewdney Trunk Road. See index map attached.

- (2) Sky 101 and Sky 102 are gold, silver and copper prospects. There has been no recorded history on the property but through prospecting by Mr. Arne Sanders, old adits and tunnels were found which showed promising value in gold, silver and copper. Mr. Sanders then formed Skyrocket Exploration & Resources Inc., which Company is the present owner. As the Company is very young, it is difficult to make an assessment of the property at this time although it is showing high assays in soil samples for copper. However, no definite pattern has been obtained as yet.

- (3) Geochemical Survey: 66 samples were collected for Geochem which have been listed separately.

Geophysical Survey: 2-1/4 kilometres of line were surveyed for Geo chem (soil samples)

Drilling: None

Geological Survey: None

Topographic Survey: None

(3) Prospecting: On Sky 101, composed of one unit, the total area of 500 square metres was prospected.

On Sky 102, composed of 20 units, the bottom half of the 10,000 square metres has been prospected.

Line Cutting: On Sky 102, 5 500-metre lines were cut, number 11 through 15 north.

(4) List of Claims: Sky 101 and Sky 102

Detailed Technical Data and Interpretation:

Purpose: The investigation was to determine anomalies in gold, silver and copper.

Results: The results in copper showed higher than the normal background for Coastal properties.

Interpretation: Our interpretation is that there is copper deposit on the ground with 70 feet of over-burden.

Conclusion: Our conclusion is that lines 14, 15 and 16 should be carried another 1000 metres East to prove up anomalous zones in copper. These lines are on Sky 102 North.

Author's Qualifications: 3 months' field prospecting in 1979 for Alpine Silver Ltd. under the guidance of John Spelay, prospector since 1947.
Secretary-Treasurer of Alpine Silver Ltd.
President of Skyrocket Exp. & Resources Inc.
2 years additional field experience with interpretation of rock samples by Yukon Chamber of Mines.
