O.K. PROPERTY

VANCOUVER MINING DIVISION

INTRODUCTION

In the fall of 1980, an exploration program was undertaken in an attempt to differentiate the higher grade zones.

A program of detailed soil sampling and detailed magnetometer readings were taken primarily in two zones.

This report provides an analysis of the results and suggests a further program.

LOCATION & ACCESS

The OK property is located 23 km. north north-west of Powell River in the Vancouver Mining District. The geographic location is 50°03' north latitude and 124°40' west longitude. The property extends south of Theodosia Inlet and 3.2 km. east of Okeover Inlet.

The property is readily accessible from Powell River. Travel north on highway 101 towards Lund for approximately 8 km., then turn to the right at West Road. This secondary road will lead to the property, a distance of just over 23 km.

AQUARIUS RESOURCES LTD.

OK PROPERTY

CLAIM MAP

Scale 1-50,000

TOPOGRAPHY

The property extends south from Theodosia Inlet up rugged, steep gradients to a plateau-like area, which is ring-like, being surrounded by hills rising from 1000 m. to 1100 m. A.S.L., while the plateau area is from 760 m. to 850 m. A.S.L.

Several lakes occur on the property, which are separated by elongated sloughs and swamps, which in turn are separated by northerly trending dikes 30 m. to 60 m. wide and 5 m. to 15 m. high.

In the north, the drainage is towards Theodosia Inlet, while the remainder drains to the south and south-west.

Approximately 85% of the ground is covered by relatively thin glacial drift.

HISTORY

Mr. R. Mickle located the property in 1965 using a geochemical stream sampling method. Since that date, several major mining companies have conducted exploration programs on the property. To date, some 44,533 feet of diamond drilling and 2,380 feet of percussion drilling has been carried out as well as numerous geochemical, geological and geophysical surveys.

The following table indicates the companies and the extent of their work on this property.

	<u>Year</u>	
Mickle and Boylan	1965	Discovery.
Noranda Mines Ltd.	1966-67	D.D. - 8,429 feet; geological & geochemical surveys.
Asarco	1968	D,D, - 3,290 feet; geological & geochem. surveys.
Falconbridge	1967-70	D.D. - 1,996 feet; geological & geochem. surveys.
Duval Corporation	1971	Percussion Drilling, 2,380 ft.
Granite Mountain Mines Ltd.	1972	D.D. - 14,031 feet; geological, geophysical and geochemical surveys.
Sierra Empire	1973	D.D. - 2,092 feet.
Western Mines Ltd.	1974	D.D. - 12,695 feet.
Western Mines Ltd.	1977	D.D. - 1,995 feet.
Aquarius Resources Ltd.	1979	D.D. - 205 metres and surface trenching.

In all, a total of 83 diamond drill holes totalling 13,778.7 metres and 12 percussion holes totalling 725.5 metres have been completed.

GEOLOGY

The property is underlain by a diorite-gabbro complex which, in the central part of the property has been intruded by two stages of igneous rocks, namely a central core of quartz monzonite surrounded by a granodiorite. The whole has been cut by a swarm of north-trending dikes occupying late fractures.

The quartz monzonite is elliptical in shape, about 1.6 km. long and 600 metres wide. It strikes north towards Theodosia Inlet. The granodiorite which surrounds the monzonite is about 8 km. in length and 1.6 km. in width with a strike of N 15° E.

The age is believed to be Cretaceous or Tertiary, but there is no clear evidence for the date.

The mineralization, that is the chalcopyrite with minor pyrite, appears to be related to the quartz monzonite. Higher grades of chalcopyrite with minor molybdenite occur around the flanks in the granodiorite. Molybdenite with minor chalcopyrite occurs in the pyrite halo outside the above zone.

A report by Meyer, Gale and Randall, which was prepared for inclusion in the Charles S. Ney Volume, Special Volume 15, pp. 311-316 published by the C.I.M.M., has the most concise, comprehensive information on the OK property. A copy is included at the end of this report.

MINERALIZATION

The primary sulphide mineralization consists mainly of pyrite, chalcopyrite and molybdenite. Traces of bornite and sphalerite have been reported.

In the latest assaying, the samples showed low gold values, i.e. 0.057 oz/ton to 0.001 oz/ton and silver values averaged from 22 samples gave 0.31 oz/ton from a high of 1.57 oz. to a low of 0.05 oz/ton.

Oxidation does not appear to penetrate deeper than 6 metres. In this oxidation zone are mainly limonite with minor malachite and azurite in some surface exposures.

The minerals of economic significance, that is the chalcopyrite and molybdenite, occur in fractures, in quartz stringers, in small irregular veinlets, in blebs and some disseminations.

This mineralization is primarily peripheral to the quartz monzonite core and the inner alteration halo. Pyrite primarily occurs in the outer halo zone, varying from 2 to 5% in grade.

1980 PROGRAM

The 1980 program was instituted to attempt to find a method of indicating higher grade zones.

Initially, detailed geochemical sampling was carried out in the North Lake zone where tonnage has been indicated. The average here is 0.3% Cu and it was hoped that by applying results from this area to the South zone, it may be possible to predicate results and ascertain whether higher copper values in geochemistry would indicate higher values in the rock. The South zone was used because it has been logged and, with the geochemical results, a program of rock trenching could be carried out.

In conjunction with this, detailed magnetometer readings were taken on the same lines in an attempt to see whether the dikes which cut the mineralized zones could be located.

In addition to this work, some surveying was carried out to tie roads, lines, etc., into the grid. A camp site was prepared for the 1981 season. A considerable amount of road work was necessary because of heavy rains.

GEOCHEMISTRY

A program of geochemical sampling was carried out on the main areas, the North Lake zone and the South zone, plus trial lines at the Theodosia area and south of Lizard Lake.

The old grid lines were re-chained and lines L20 - L44, which are 60.9 metres apart, were sampled, using augers at 7.6 metre intervals. The "B" horizon was sampled generally, although in a few of the lower areas, lower "A" horizon may have been obtained.

A similar program was carried out on L124 - L140, L186 - L190 and L76 - L80.

A total of 1035 samples were shipped to Min-En Laboratories Ltd. of North Vancouver for analysis. The samples were analyzed to give values of silver, molybdenum and copper in parts per million.

A study of the results indicates that the following values indicate the anomalous zones: copper 100 p.p.m. plus, molybdenum 32 p.p.m. plus, and silver 16 p.p.m.

The copper, molybdenum and silver have been contoured on the enclosed maps. The contouring, which shows coincidence between some of the values, is rather erratic and the results should be re-examined after detail mapping has indicated possible dikes. It is known that dikes cut these areas. Dikes under 10 feet wide would make little difference, but wider dikes

would have to be considered as waste.

Generally, the silver values are isolated, but new appraisals can be made after trenching and sampling in the South area has been completed.

MAGNETIC SURVEY

Profile lines of the North Lake zone, Lines 124 - 140, and the South zone, Lines 20 - 44, were carried out by Cochrane Consultants Ltd. of Delta, B.C.

A Scintrex MBS-2 system was used, being a permanent recording base station, while geochem. sample points were used for readings with a Proton Magnetometer. The purpose was to ascertain whether the dikes could be picked up. As yet, no attempt has been made to interpret the results, but this will be carried out during the coming season.

The profile maps are enclosed with the report.

CONCLUSIONS

From the geochemical program, the south zone appears to be of greater interest than the North Lake zone. This, fortunately, is of prime interest, as the area has been logged and trenching can be carried out to ascertain the validity of the survey. Trenching will also aid in the interpretation of the magnetic results.

Respectfully submitted,

A circular seal for a Professional Engineer in the Province of British Columbia. The seal contains the text "PROFESSIONAL PROVINCE OF BRITISH COLUMBIA ENGINEER". The name "A. S. ASHTON" is stamped across the center, and a handwritten signature "A. S. Ashton" is written over it. To the left of the seal, the text "A. S. ASHTON" and "A. S. ASHTON SHP. Eng." is printed.

Delta,
British Columbia.

March 31, 1981.

CERTIFICATE OF QUALIFICATIONS

I, Arthur Sydney Ashton, do hereby certify that:

1. I am a practising geological engineer with a residence at 5441 - 7B Avenue, Delta, British Columbia.
2. I am a graduate of the University of Toronto and have been granted the degree of Bachelor of Applied Science.
3. I have been practising my profession as a geological engineer for thirty-one years.
4. I am a member of the Association of Professional Engineers of British Columbia and a member of the Association of Professional Engineers of Ontario.
5. The report is based on supervision of the program in 1980, plus a review of published literature.
6. I have no interest in Aquarius Resources Ltd., nor in the mining property.

Delta,
British Columbia.
March 31, 1981.

ANALYTICAL REPORT

Project OK Date of report Nov. 18/80.

File No. 0-1120 Date samples received Nov. 11/80.

Samples submitted by:

Company: Aquarius Resources

Report on: 312 soils Geochem samples

Assay samples

Copies sent to:

1. Aquarius Resources, Vancouver, B.C.
2. Aquarius Resources Powell River B.C.
3.

Samples: Sieved to mesh - 80 Ground to mesh

Prepared samples stored discarded

rejects stored discarded

Methods of analysis: nitric, perchloric digestion. A.A. Analysis.

Remarks: More samples to follow.

ANALYTICAL REPORT

Project OK Date of report Nov. 26/80.

File No. 0-1120 Date samples received Nov. 11/80.

Samples submitted by:

Company: Aquarius Resources

Report on: 420 soils Geochem samples

Assay samples

Copies sent to:

1. Aquarius Resources, Vancouver, B.C.
2. Aquarius Resources, Powell River B.C.
- 3.

Samples: Sieved to mesh - 80 Ground to mesh

Prepared samples stored discarded

rejects stored discarded

Methods of analysis: nitric, perchloric digestion. A.A. Analysis.

Remarks: Completion of this file number.
