Addendum: Two Certificates of Assay of BARK samples	
Addendum: Photocopy of original BARK claim registration.	

INTRODUCTION

Position of Bark Claim

The Bark claim is located on Vancouver Island, in the Alberni Mining District, south of Port Alberni and east of Bamfield. The Legal Corner Post of the claim is situated 3.65 kilometres bearing 41° north of west from the south-west tip of Hitchie Lake: Eastings - 66450 Northings - 5406475. Refer to N.T.S. series 1:50000, 92C 15W, Nitinat. Access is via helicopter or on foot approximately 6 kilometres from road end below Flora Lake; i.e.: allow minimum one hour road travel from Franklin River logging camp.

Property definition, history, current owner, brief economic assessment, etc.

The Bark mineral claim is situated in a region of Vancouver Island intrusives, including grandiorite, quartz diorite, granite, quartz and monzonite. The claim was staked by the author on the 24th of July, 1981. Some old claim posts were observed within the boundaries of the present claim, but identification of former owners' data was not possible. There was no indication of work having been undertaken. The Bark claim is recorded as a sixteen unit block; however, a portion of one unit lies in a "No Staking" reserve. This particular unit is remote from the main mineral showing, from which a representative sample assayed 2.44% copper. It is possible that the property contains a significant deposit of porphyry copper; however, no gold values of interest have been obtained. Further surveying is warranted above the main showing. The current owner/operator/author is Colin A. Beach, B.A., mineral exploration technician and prospector.

Geochemical Survey

Sixteen samples were obtained on two surveys, of which fourteen were rock-chip samples, one was a silt, and one was "float" rock from the creekbed. Samples were obtained by the author and by the accompanying geologist, Alistair Findlay, B.P. Minerals Ltd., and were analyzed at two different labs.

Geophysical Survey

Some linecutting undertaken in preparation for this; airborne survey is planned.

INTRODUCTION

(continued)

Geological survey

Within the area delineated by the triangle on Map 1 denoting sample points and values. Some 100,000 square meters was surveyed.

Topographic survey

The same area was recorded in this survey, in addition to approximately one-third of the area of the 16 units.

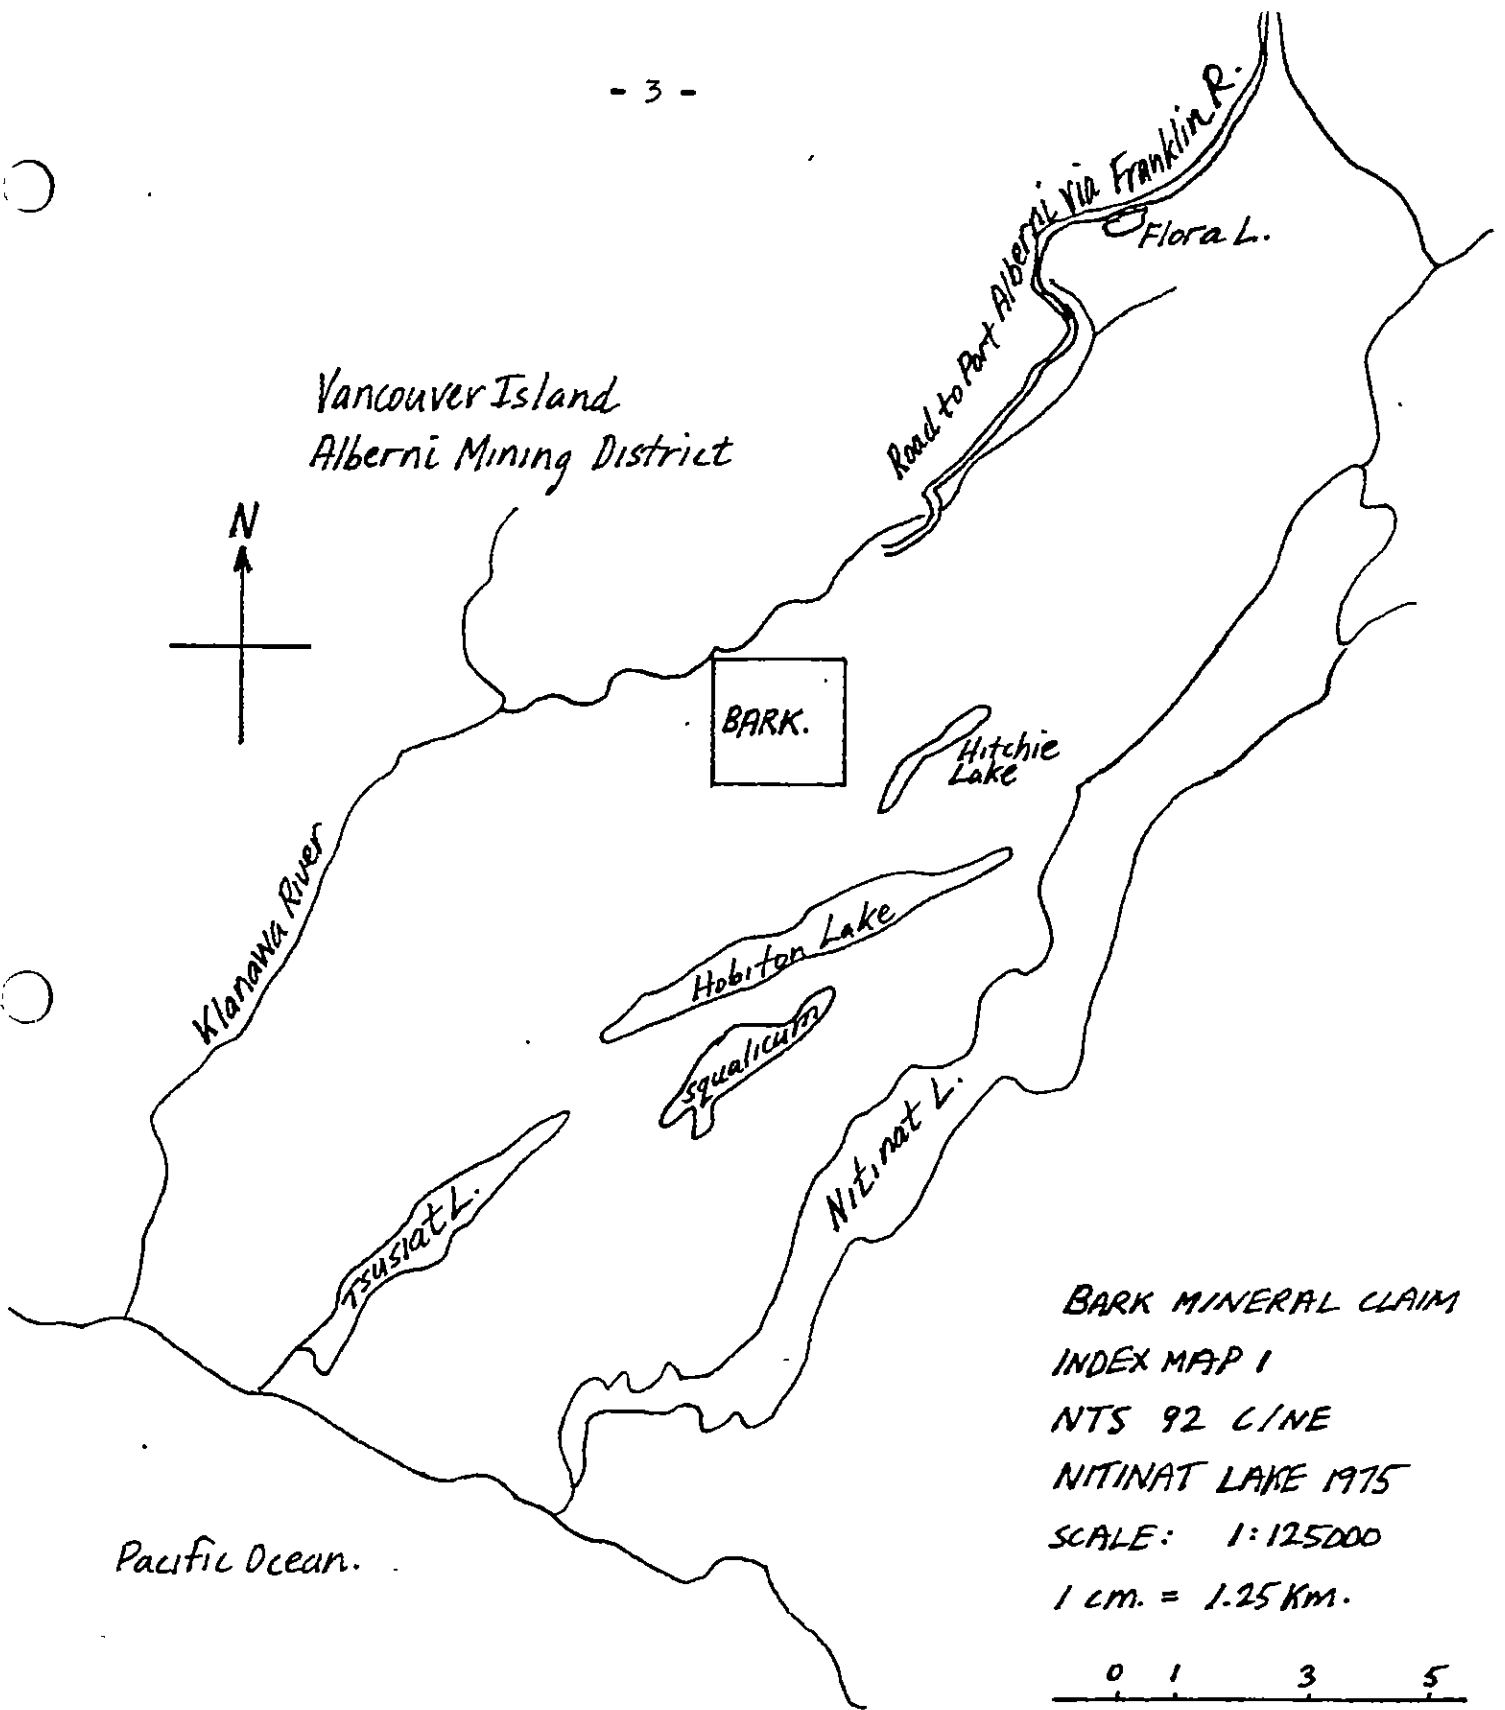

Prospecting

The central creek area as delineated on Map 1, and somewhat beyond, has been extensively prospected, sampled and analyzed. The total area covered was about 175,000 square meters.

Linecutting or grid establishment

4000 metres of line has been blazed and flagged for survey control; all sample points have been flagged and numbered in the field.

 PHYSICAL - AREA PROSPECTED

GEOCHEMICAL SURVEY OF THE BARK CLAIM And PROSPECTING

The geochemical surveying of the Bark mineral claim was undertaken on two occasions during the 1981 - 1982 assessment period. On the first the sampling was carried out under the supervision of the owner/operator with the assistance of Mr. John Pater of Port Alberni, B.C. Qualifications of the owner/operator are included herewith. The field notes for this sampling program have been transcribed and are included with this report also. Bark #5 and #6 samples contained native copper and chalcopyrite; Bark #10 contained massive sulphides. The former samples assayed at greater than 20,000 p.p.m. copper. The second geochemical survey, conducted by Mr. Alistair Findlay, P.Geol., B.P. Minerals Ltd. verified these anomalous results. Mr. Findlay observed the main showing to exist in a multiple shear zone characterized by diorite and grandiorite, flanked on the south, upstream, by quartz monzonite, feldspar and hornblende. Some 150 metres south of the main showing (waterfall), massive silification in quartz veinlets was encountered. Mr. Findlay's recommendations are for further prospecting and sampling to the southern boundary of the property, with emphasis on sediment sampling of the tributaries entering the creek of which the bedrock contained the main copper exposure. A porphyry type copper deposit may be indicated by the host rock types and by the area of the exposure. The geochemical assay reports from Bondar Clegg & Co. Ltd. and from Acme Analytical Laboratories Ltd., provided herewith, indicate the testing procedures employed and the reagents and concentrations used for extraction.

BARK Mineral Claim

Flow n.n.w. to E. Klanawa River.

DETECTION LIMITS FOR GOLD

20 gram sample: 5 ppb.
 10 gram sample: 10 ppb.
 1 gram sample: 100 ppb.

Sample Wt. 20 g. unless otherwise stated.

NOTE:

Check concentration/sample weight ratio for effective detection level.

Location and Description of Rock Samples obtained from the central creek bed area of the Bark claim as diagrammed on page 8 of this report.

- BARK # 1 Float ex creekbed 585 metres south of the confluence with the East Klanawa River.
- # 2 Float from 200 feet above the creek bed on the east side, about 800 metres south of the confluence with the E. Klanawa R.
- # 3 Creek bed float, 40 metres upstream from 1st major slide on west side of creek; see photos A & B.
- # 4 Creek bed float, about 150 metres upstream from 1st major slide on west side of creek.
- # 5 & # 6 From vein outcrop below main 40' to 50' waterfall on east side of creekbed about one kilometre south of the confluence with the E. Klanawa R. Abundant copper staining and some native copper visible.
- # 7 From massive rock slide on southwest side of creek opposite same waterfall; about 10 metres from the waterfall.
- # 8
- # 9
- # 10 Ex vein in steep running creek near this first major waterfall; site is in the mapped tributary of the major creek. Massive sulphides noted. Sample point flagged 24-2 in the field.
- # 11 Out of a vein on the southwest side of the main creek immediately above first main waterfall; vein is in the middle of 15' wide dark orange brown band of staining. Flagged 24-6.
- # 12 Float sample from creek bed about 20 metres up stream from 2nd waterfall south of E. Klanawa R. confluence. Sulphides noted. Flagged 24-5.
- # 13 From vein exposed on edge of creek bed; 2' wide vein rises to south on incline of about 40 degrees. Sulphides noted. Flagged 24-4.
- # 14 From slide on east side of creek, about 50' above creek & 200 m. upstream from 1st falls. Sulphides noted. Flagged 24-3.

Flow n.n.w. to E. Klanawa River.

Plan of anomalous values of samples taken by A. Findlay, P. Geol., B.P. Minerals.

Education

Year

- | | |
|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1967 | Graduated with Academic Honours, Grade XII, West Vancouver Secondary School. |
| 1968 | Completed 1st year university Arts, Received McGill University Senior School Certificate for studies at Neuchatel Junior College, Neuchatel, Switzerland. |
| 1974 | Graduated with a Bachelor of Arts, major in English Literature, University of British Columbia. |

Awards and Scholarships

- | | |
|------|---------------------------------------------------------------------------------------------------------------|
| 1967 | Certificates of honour for excellence in Academics, Service and Athletics. |
| 1967 | Awarded \$2,200 bursary/scholarship for tuition and accommodation from Neuchatel Junior College, Switzerland. |

Employment History

Note: For references and dates of employment, please refer to the detailed resume enclosed.

A. Managerial experience

1. Commercial fishing industry

Supervision of transfer of roe herring from seiners and packers to barges.

2. Construction industry

Designed and managed construction of warehouse facility for canned salmon.

3. Mining Industry

a. Engineered eight man placer gold survey:

- i. coordinated, supervised work of road-building, trenching with D-6 caterpillar tractor;
- ii. supervised Becker drill crew and coordinated sampling program, located pilot holes,
- iii. made visual analysis of material sampled, maintained field notes on survey progress;
- iv. prepared final report on survey, including map for submission to the Board of Directors.

b. Rendered a variety of mineral exploration services over ten years in B.C., the Yukon, and Alaska, as an employee field manager and by contract, including:

- i. claimstaking, map and affidavit preparation;
- ii. grid application to potential mineral properties;
- iii. geochemical surveys: soil, sediment sampling;
- iv. geophysical surveys: instrument work including magnetometers, scintillometers;
- v. general prospecting of outcrop; orientation with map, compass and altimeter.

A. Managerial Experience (continued)

4. The Arts

As coordinator (1976) and Consulting Expert (1978) at the Canadian Festival of Youth Orchestras, Banff Centre School of Fine Arts, Banff, Alberta, mandate was to produce nationally televised ten day festival of the Arts, involving six orchestras, 550 musicians, twenty professional symphony players, and four internationally renowned guest conductors.

B. Other construction industry experience:

1. Forming and framing of St. Andrew's Church, Madeira Park, B.C.
2. Framing condominiums at the Cheakamus Inn, Whistler, B.C.
3. Duplex framing, North Vancouver, B.C.
4. Single family home framing, West Vancouver, B.C.
5. Construction for television scenery, C.B.C., Vancouver.
6. Building the instant town, residence project for Lornex Mine, Logan Lake, B.C.

C. Bookkeeping and accounting experience:
