1.0 Summary

The author was contracted by World Wide Minerals Ltd. to undertake further detailed examinations of the Whipsaw Creek property located near Princeton, B.C.

Soil geochemistry, geological mapping, trenching, and sampling of known mineral occurrences were undertaken on the Metestoffer, BZ, and T.G.S. showings as described in this report. This work was personally completed by the author.

## 2.0 Introduction

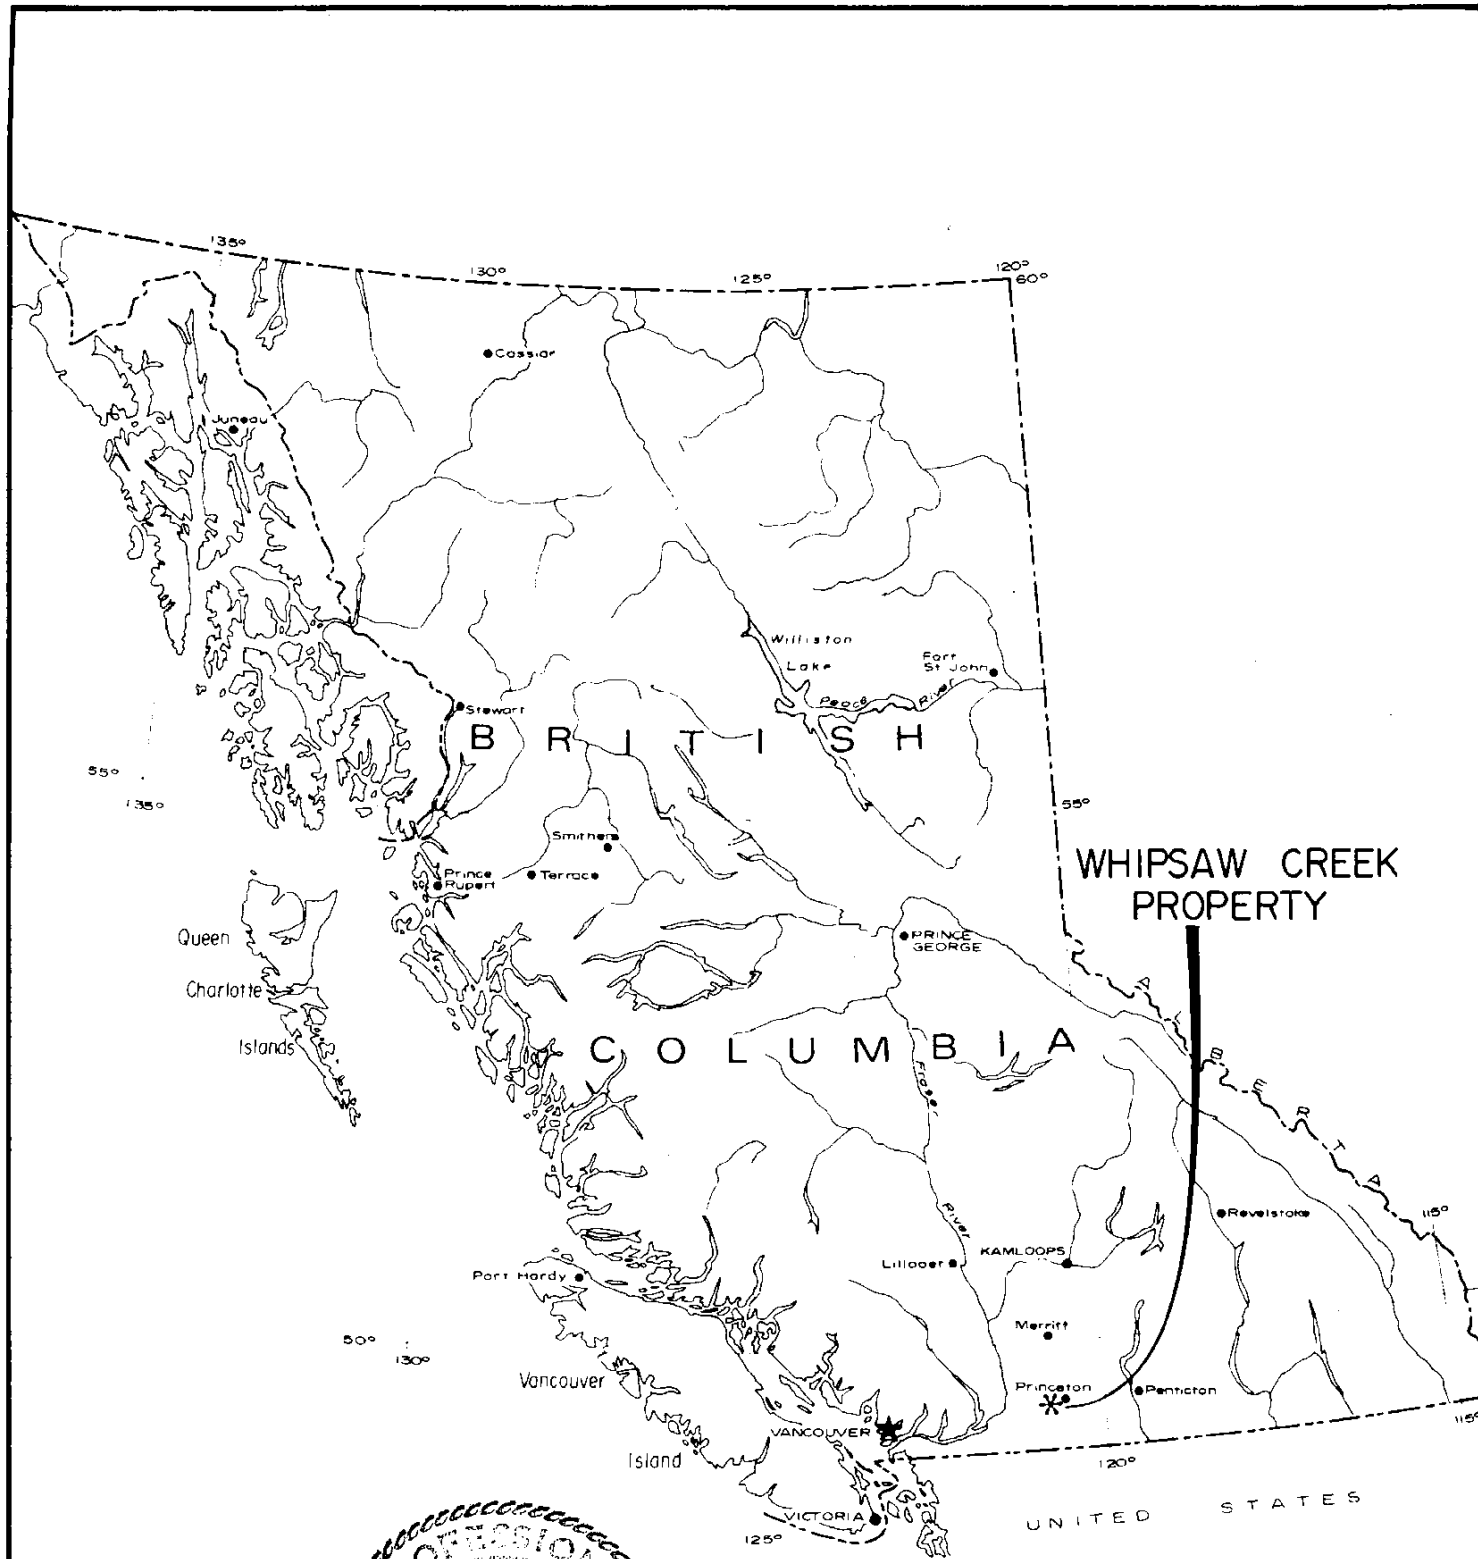

World Wide Minerals Ltd. controls 12 mineral claims and fractions straddling Whipsaw Creek located about 16 miles southwest of Princeton, B.C.

An extensive amount of exploration work including diamond drilling was undertaken during the mid 1960's and early 1970's by Whipsaw Mines Ltd.

This report covers the examinations undertaken by the author during the period August 8th - 13th, 1982.

Property Location Plan

Plan No. 1

**WHIPSAW CREEK  
PROPERTY**

WORLD WIDE MINERALS LTD.		
<b>PROPERTY LOCATION MAP WHIPSAW CREEK SIMILKAMEEN M.D., B.C.</b>		
JOHN R. POLONI & ASSOCIATES LTD.		
DRAWN : J.R.P.	CHECKED: J.R.P.	PLAN No.
SCALE : As shown	DATE : Aug. 15, 1982	1

### 3.0 Location and Accessibility

The Whipsaw Creek property is located on Whipsaw Creek about 16 miles southwest of Princeton, B.C., at about 49° 16' North Latitude and 120° 43' West Longitude.

Access from the Hope-Princeton Highway is by good secondary logging roads for a distance of 12 miles. In wet weather four-wheel drive vehicles are required.

### 4.0 Claims Information

The property consists of 12 claims and fractions covering the mineral showings previously explored by Whipsaw Mines Ltd. Claims data is as follows:

<u>Name</u>	<u>Record No.</u>	<u>Expiry Date</u>
Kerry 1 (1 unit)	710	August 28, 1983
Kerry 2 (1 unit)	711	August 28, 1983
Mike (10 units)	411	August 21, 1982

### 5.0 Physical Features

Relief in the area is gentle at higher elevations and more rugged along creek valleys. The highest elevation is 6,300 feet above sea level. Road access is possible to within close proximity of the presently known showings.

5.0 Outcrop frequency is low except in stream valleys and road cuts. Much of the area is covered with economical timber. No buildings exist on the claims.

#### 6.0 History

History of the Whipsaw Creek area dates to the late 1800's when placer gold and platinum were being sought. Lead-zinc deposits have been known and explored since about 1915. A great amount of work was undertaken during the 1960 - 70's in examining gold and silver, lead, zinc and copper bearing showings. This work consisted of geology, geochemistry, trenching, geophysics and diamond drilling.

Whipsaw Mines Ltd. and Texas Gulf Sulphur previously explored the mineral showings controlled by World Wide Minerals Ltd.

#### 7.0 Geology

According to Leighton, D.G., 1973, the geology of the area is relatively complex requiring additional field work for clarification. The Whipsaw Creek area is underlain by Nicola group, Upper Triassic Age, volcanic and sedimentary rocks having a North 20° West trend with moderate dips to the west. Metamorphism has reached an amphibolite grade with the greater metamorphism to the west where the Nicola units grades into the Eagle Granodiorite.

7.0 Anderson, P., 1973, describes the geology as follows,

"The Whipsaw property covers an area where Nicola Group Volcanic rocks contact the Eagle "Granodiorite" (part of the Coast Range Intrusive) to the West. This type of environment is well known in the Princeton area to be favourable for the localization of mineralization. Volcanic rocks, within 1 mile of the Eagle contact, have been reconstituted to schists and gneisses.

In addition, a swarm of porphyry dykes have intruded along this contact zone, causing intense fracturing, disseminated mineralization and alteration. Following the porphyry event, the same zones where porphyry intruded were subjected to re-brecciation and copper-lead-zinc-silver-gold-molybdenum mineralization. This has resulted in several structurally complex, intensely fractured, altered and mineralized "breccia" zones which are elongated in a true north south direction".

As further described by Anderson, P.,

"Two major breccia zones have been established by geology, geochemistry, photogeology and exposure to lie on the western part of the property, but there is evidence that at least one more zone exists to the east of these".

These zones are exemplified by known mineral exposures, such as:

1. Metestoffer and BZ - west breccia zone.
2. Knight and Day, and Five Fissures - east breccia zone.

## 8.0 Current Exploration

### 8.1 Metestoffer Showing

This showing, plans #4 and #5, is located immediately south of Whipsaw Creek and is described as a wide breccia zone containing alteration zones of carbonate and sericite in gneissic units, cut by an east west southerly dipping quartz vein. The quartz vein and scarp face were mapped and chip sampled at 5 foot spacing to establish a relationship with results obtained in past diamond drill holes. Results are shown on plans #4 and #5. In order to properly sample the showing area, hand trenching was completed to expose the badly sloughed scarp face.

### 8.2 BZ Showing

The BZ showing was initially discovered as the result of widely spaced soil geochemistry. Old trenches while somewhat sloughed, exposed a highly oxidized silicified gossan zone in gneissic units, containing thin seams, filaments, and pods of pyrite, arsenopyrite (?) and malachite staining. A 100 foot geochemical grid was established over the area of the two trenches to confirm previous geochemistry, plan #6. B- horizon material was obtained at each location for analysis. Mapping and detailed chip sampling of the southerly trench was completed as shown in plan #7.

### 8.3 T.G.S. Trench

The T.G.S. Trench was mapped and chip sampled. This trench exposed a wide gossan and bleached zone in gneissic and schistose units cut by porphyry dikes containing finely disseminate pyrite and minor chalcopyrite. Results are shown on plan #8.

### 9.0 Program Summary

#### Personnel

John R. Poloni, August (8 - 13) 1982

#### Cost Breakdown

- Mobilization - demobilization and field time 4½ days	\$ 1,000.00
- Office, report 2 days	750.00
- Drafting, typing, binders	250.00
- General testing	1,062.75
- Truck 4 days @ \$40.00	160.00
847 kms @ \$ 0.25	211.75
- Fuel	95.20
- Motel	95.40
- Food	83.63
- Supplies, flagging, film thread	14.46
Total Costs	\$ 3,723.19

Appendix A

Certificate

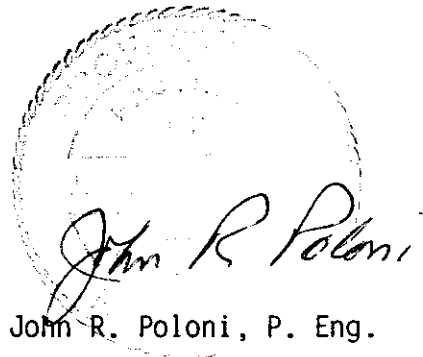

Certificate

I, John R. Poloni, of 5502 - 8B Avenue, in the Municipality of Delta,  
in the Province of British Columbia,

DO HEREBY CERTIFY THAT:

1. I am a Consulting Geologist.
2. I am a graduate of McGill University of Montreal, Quebec,  
where I obtained a B.Sc. Degree in Geology in 1964.
3. I am a registered Professional Engineer in the Geological  
Section of the Association of Professional Engineers of  
the Province of British Columbia.
4. I have practiced my profession since 1964.
5. I am a Fellow of the Geological Association of Canada and  
a member of the Canadian Institute of Mining and Metallurgy.
6. I have personally completed the work programs as described  
in this report during the period August (8 - 13, 1982).
7. I have no interest in the properties or securities of World  
Wide Minerals Ltd., nor do I expect to receive or acquire  
any.

Dated this 15 day of August, 1982.

*John R. Poloni*
