INTRODUCTION

Location and Access

The Amic claim group (4 units) is located between elevations of 1800m and 1860m in the Bayonne Mining Camp area, approximately 35km northwest of Creston, B.C. Coordinates of the area are 49° 12' N and 116° 57' W. Road access from the Salmo-Creston Highway (Route #3) is by a 17km gravel road (Blazed Creek Forest road) which leaves the highway in a northerly direction 26km west of Creston (see map #1).

Property

The property consists of 3 claims held by Cima Resources Ltd., Vancouver, B.C.

<u>Claim Name</u>	<u>Record No.</u>	<u>Units</u>	<u>Expiry Date</u>
Yukon	2678 2681	1	June, 1983
Amic I	2708	2	July, 1983
Amic II	2709	1	July, 1983

(see map #2)

History

The Amic claim group were staked in 1982 by I.R. Corvalan, agent for Cima Resources Ltd. A stream sediment survey, using a heavy metal kit, led to the finding of the Yukon vein. Posterior geochemical sampling and hand trenching allowed the identification of a vein 300m long and a fissure zone showing. Samples from both showing assayed high gold values.

 Date: Jan., 1983

Geology

The property is underlain by the Mine Stock batholith (H.M.A. Rice, 1941). This batholith consists of a fine to medium grained light grey rock, fairly uniform in texture and composition. Pegmatite and aplite dikes are frequent but nowhere very large. This batholith is also the host rock at the Bayonne and Blue Bird mines located 1km south from the Amic claim group.

This stock seems to have been fractured by the intrusion of a younger body (Bayonne Batholith). Fissures produced seem to have been filled by mineralized solutions giving origin to the several mineral deposits located in the Bayonne mining camp (see map #3).

Mineralization

The mineral occurrences consist of a fissure vein striking N 40° - 50° E and dipping almost vertical, and a fissure zone in which narrow fissures present a N.E. orientation. Both showing present similar mineralization; fissures are filled with quartz, which contains small pockets of Galena and Pyrite, the later filling micro fractures and disseminated.

Summary of Work Done

June 9 - June 26; prospecting work on the Bayonne Mining Camp, discovery and staking of the Yukon mineral claim, outcrop mapping and preliminary sampling (see map #4) a total of 12 rock samples and 200 soil samples were taken. Soil samples were assayed using a Heavy Metal Kit.

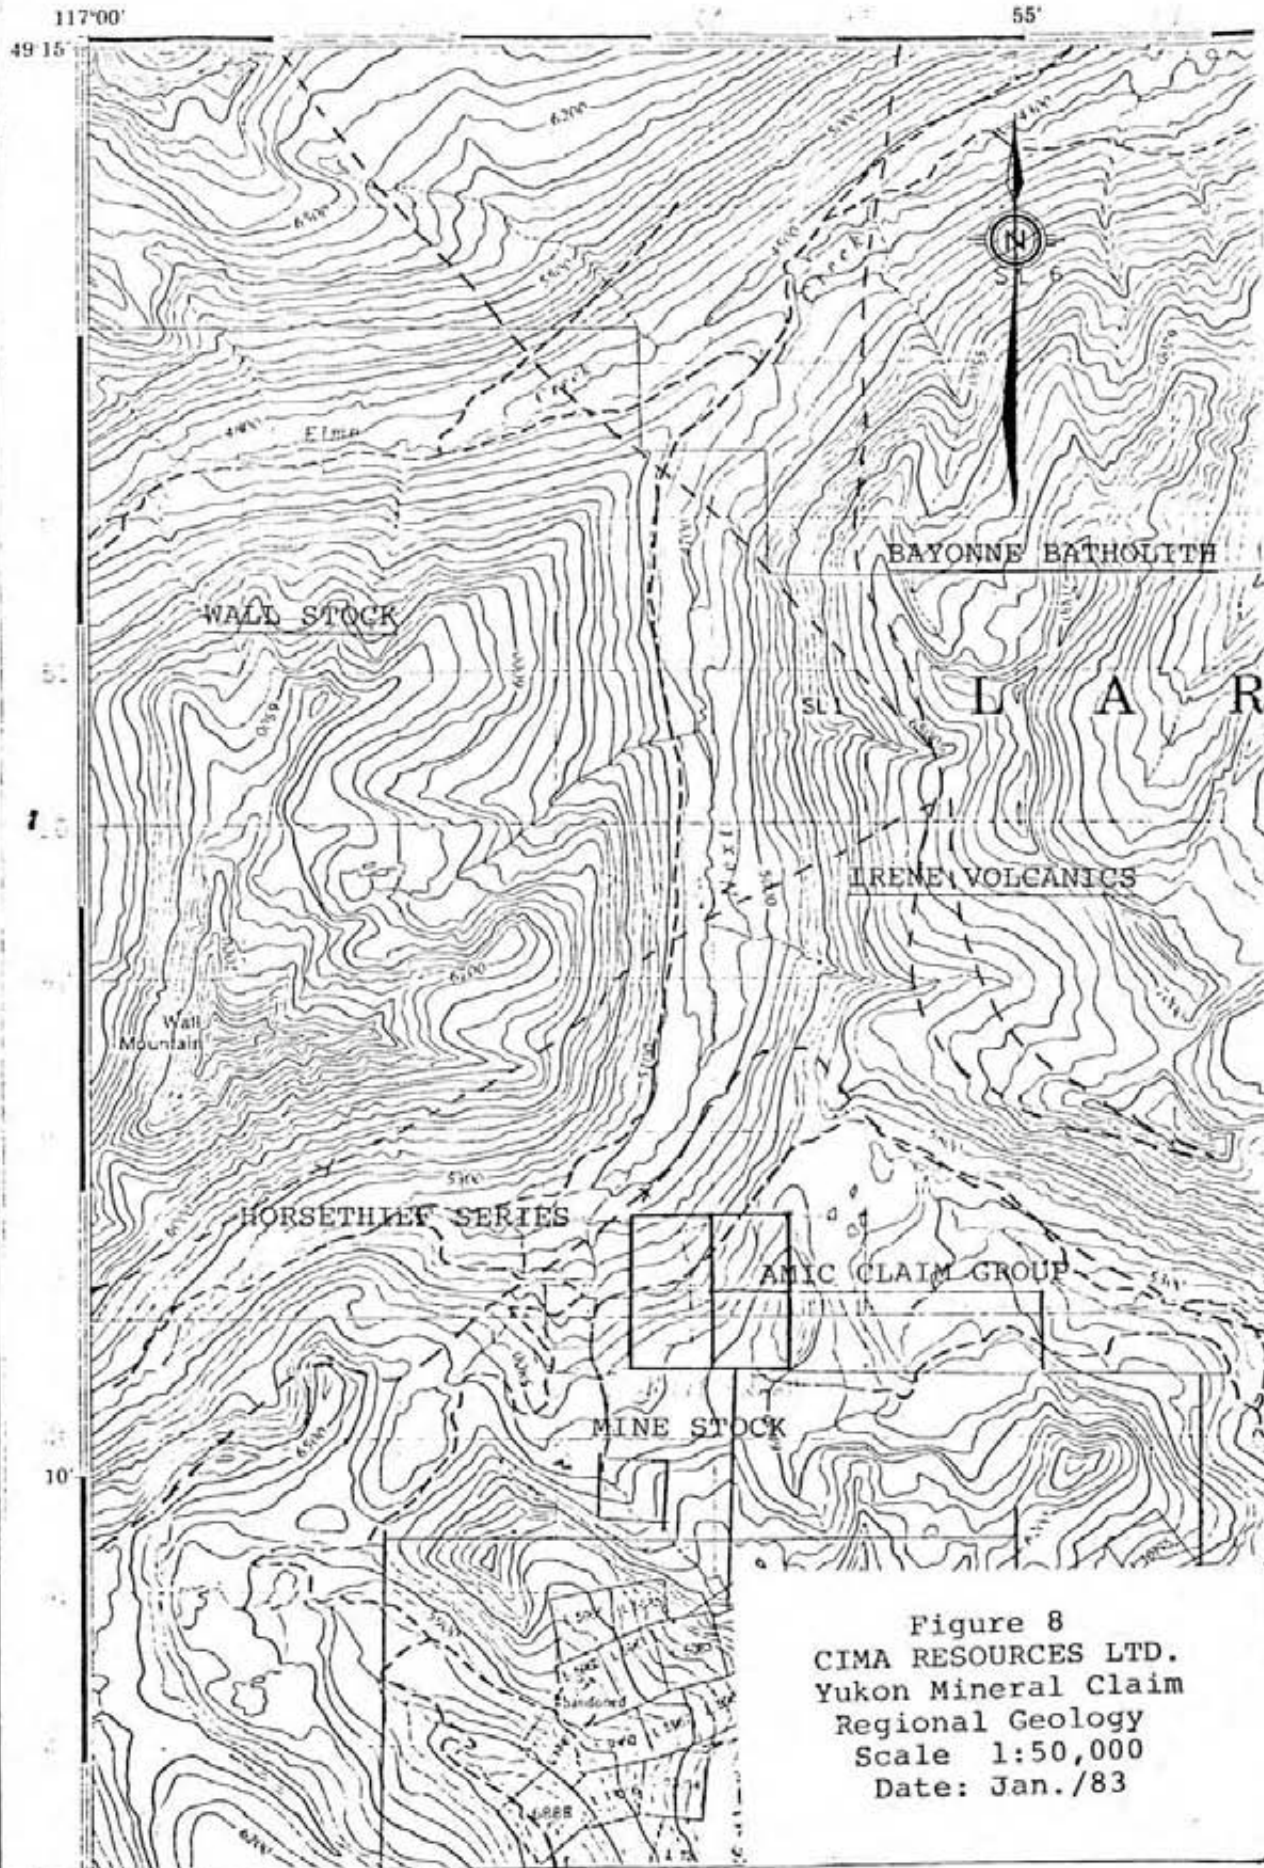

Figure 8
 CIMA RESOURCES LTD.
 Yukon Mineral Claim
 Regional Geology
 Scale 1:50,000
 Date: Jan./83

Summary of Work Done cont'd

July 14 - July 30; hand trenching and sampling on the Yukon claim (see map #5). Prospecting, outcrop sampling, trenching and staking on the Amic I and Amic II claims. A total of 32 rock samples were taken.

Sept. 7 - Sept. 11; geochemical survey and outcrop mapping on the Amic claim group, a total of 78 soil samples were taken.

TRENCHING

A total of 12 hand trenches were dug; 10 on the Yukon claim and 2 on the Amic I claim. The purpose of trenching was to study vein continuity and variations on grade ore, additionally several old work were cleaned and sampled. The Yukon vein proved to be continuous with a width ranging from 5cm up to 40cm. The degree of the quartz vein was highly variable (see map #5).

GEOCHEMICAL SURVEY

Survey Grid

A north-south baseline 860m long, following the eastern boundary of the Amic I claim, was established. Four cross-lines were run east of the baseline, covering the area surrounding the Yukon vein. All the survey lines were established by Silva compass, measured using a topline and marked with coloured flagging tape. A total of 79 soil samples were taken to be assayed mostly for gold and lead.

Soil Sampling

Samples were collected at 20m intervals, along lines. The soil sample holes were dug with shovel to an average of 25cm (B horizon) talus, rock outcrop and removed soil were not sampled. The samples were taken by hand and placed in water resistant sample envelopes where they remained until analysis.

Sample Analysis

The soil samples were delivered to Rossbacher Laboratories, Burnaby, B.C.

They were first dried and sieved to -80 mesh. Lead sample portions were digested using perchloric acid and analyzed by atomic absorption spectroscopy. Au sample portions were digested using aqua regia and then extracted into methyl isobutyl quetona to be assayed by atomic absorption spectroscopy.

Interpretation

The geochemical survey was done mostly on the Yukon claim. In this area the terrain slopes gently towards west but it is rugged and steep towards east and south. Soils are thin on the upper sector, becoming thicker in the lower sector. The only host rock in this area is the mine stock batholith.

Results of the survey are indicated in Map #5, values over 30 ppb Au were considered anomalous. The area surrounding the Yukon vein gives anomalous reading. Geochemical results also show that the Yukon vein seems to extend further of its west end, determined by trenching, and connect to the showing located on the Amic claims. The possibility of additional veins cannot be eliminated given the anomalous values north and south of the Yukon vein.

Conclusions

The geochemical sampling program attempting to locate additional areas of potential mineralization has been positive. Both showings; the Yukon vein and the Amic fissure zone seem to be connected. Further exploration work on this area is justified.

Recommendation

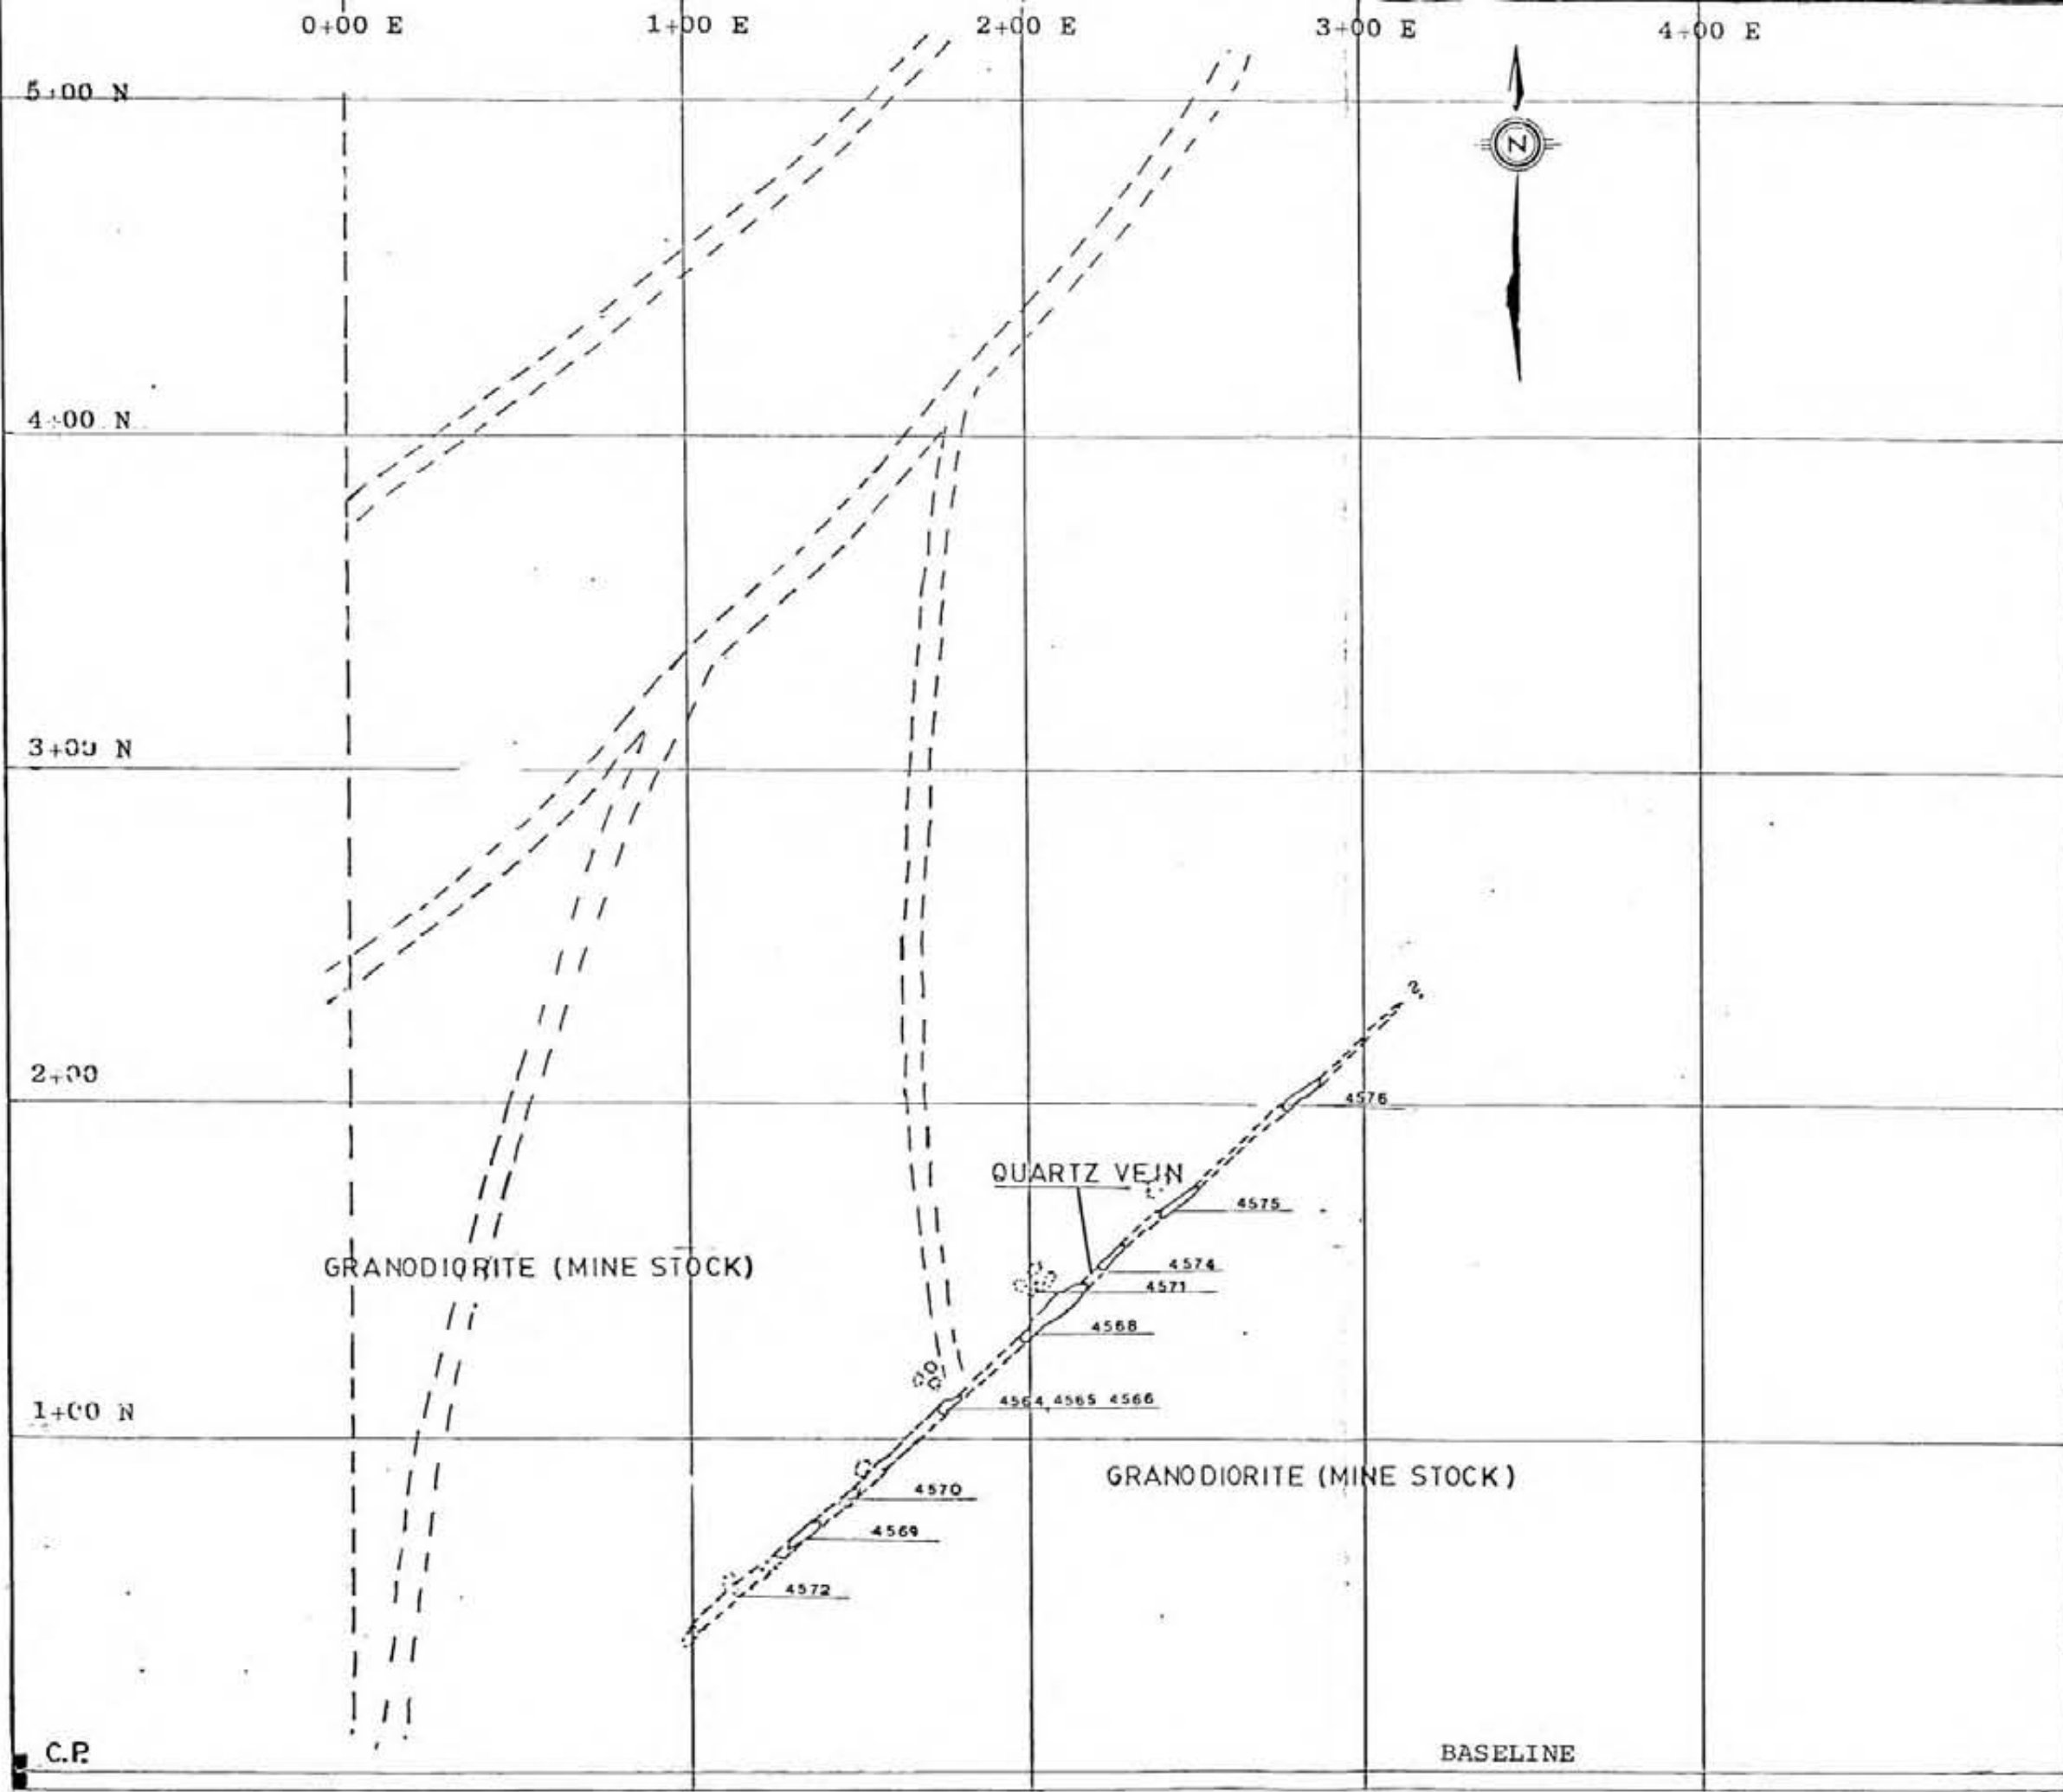

I recommend that a systematic geochemical survey be carried out along the strike of the Yukon vein projected on the Amic I claim.

ANNEX #2

IN MATTER OF THE
B.C. MINERAL ACT

AND

IN MATTER OF A GEOCHEMICAL AND TRENCHING
PROGRAM CARRIED OUT ON THE

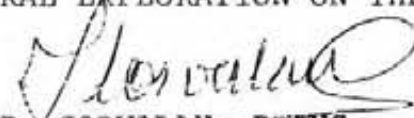

AMIC CLAIM GROUP

LOCATED IN THE NELSON MINING DIVISION
OF THE PROVINCE OF BRITISH COLUMBIA
MORE PARTICULARLY N.T.S. 82F/2W

A F F I D A V I T

I, I. RUBEN CORVALAN, P.ENG., OF THE CITY DISTRICT OF
NORTH VANCOUVER IN THE PROVINCE OF BRITISH COLUMBIA,
MAKE OATH AND SAY:

1. THAT I AM A CONSULTANT FOR CIMA RESOURCES LIMITED
AND AS SUCH HAVE A PERSONAL KNOWLEDGE OF THE FACTS TO
WHICH I HEREINAFTER DESPOSE;
2. THAT ANNEXED HERETO AND MARKED AS "ANNEX #1" IS A
TRUE COPY OF EXPENDITURES ON A GEOCHEMICAL AND TRENCH-
ING PROGRAM CARRIED OUT ON THE AMIC CLAIM GROUP;
3. THAT THE SAID EXPENDITURES WERE INCURRED WITHIN THE
PERIODS; JUNE 9 - 26, JULY 14 - 30, SEPT. 7 - 11,
1982 FOR THE PURPOSE OF MINERAL EXPLORATION ON THE
ABOVE CLAIMS.

I. R. CORVALAN, P.ENG.

ANNEX #3

CIMA RESOURCES LIMITED

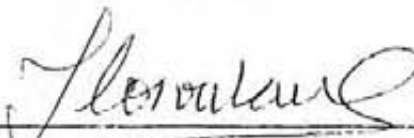

STATEMENT OF QUALIFICATIONS

I, I. RUBEN CORVALAN, P.ENG. OF THE CITY OF NORTH VANCOUVER, BRITISH COLUMBIA, HEREBY CERTIFY:

1. THAT I AM A PROFESSIONAL ENGINEER RESIDING AT #117-908 BERKLEY ROAD, NORTH VANCOUVER, BRITISH COLUMBIA;
2. THAT I GRADUATED WITH A MINING ENGINEERING DEGREE FROM THE UNIVERSITY OF CHILE, CHILE, IN 1969;
3. THAT I HAVE PRACTICED GEOLOGY AND GEOCHEMISTRY WITH EMPRESA NACIONAL DE MINERIA, SANTIAGO, CHILE FROM 1966 to 1970 AND WITH CIMA RESOURCES LIMITED FROM 1980 TO SEPTEMBER 1982.

DATED THIS 20th DAY OF January, 1983
AT VANCOUVER, BRITISH COLUMBIA.

SIGNED

I.R. CORVALAN, P.ENG.
