PERCUSSION DRILLING, GEOLOGY AND GEOCHEMICAL REPORT

INTRODUCTION

The TOIL Mineral Claim is located at Five Mile Bay, on the west side of Harrison Lake, near the north end. The property was found during a reconnaissance prospecting programme in the area. A highly pyritic zone of rhyolitic volcanics and sericite schists was noted and the property staked. The prospect area was subsequently silt and soil sampled, revealing anomalous values in gold, lead, and arsenic. This report concerns the detailed follow-up work from these initial surveys.

LOCATION AND ACCESS

The property can be reached by 4x4 road along the west side of Harrison Lake, either from the north or south ends. Heavy equipment can be brought to the property by a good barge service which supplies the logging company at the north end of the lake. Driving time from Vancouver is 5-6 hours, depending on road conditions. The claim area is the location of an old logging camp and some of the buildings have been refurbished for mining exploration use.

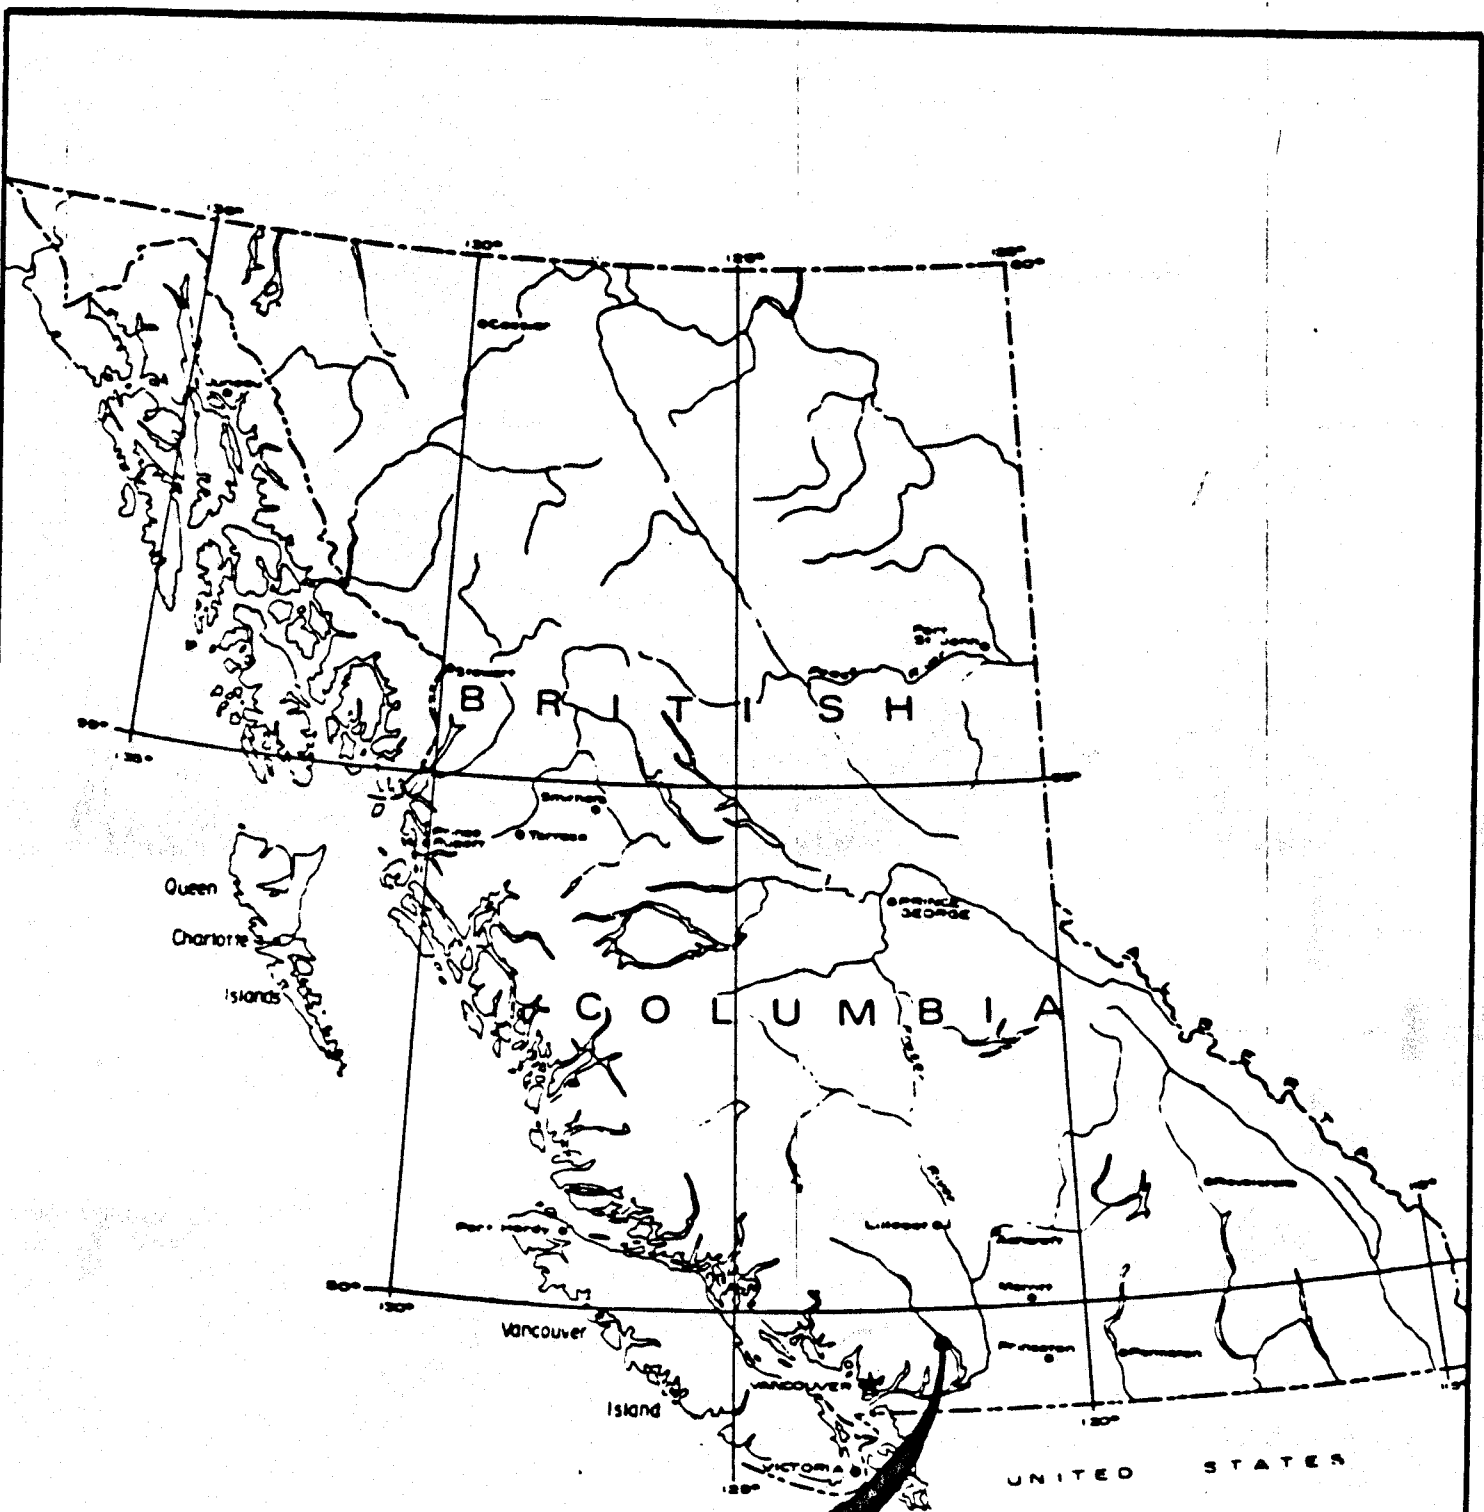

The forest cover is mainly second growth fir and alder.

CLAIMS

<u>Claim Name</u>	<u>Units</u>	<u>Record Number</u>	<u>Record Date</u>
TOIL	20	1285(9)	Sept 21, 1981

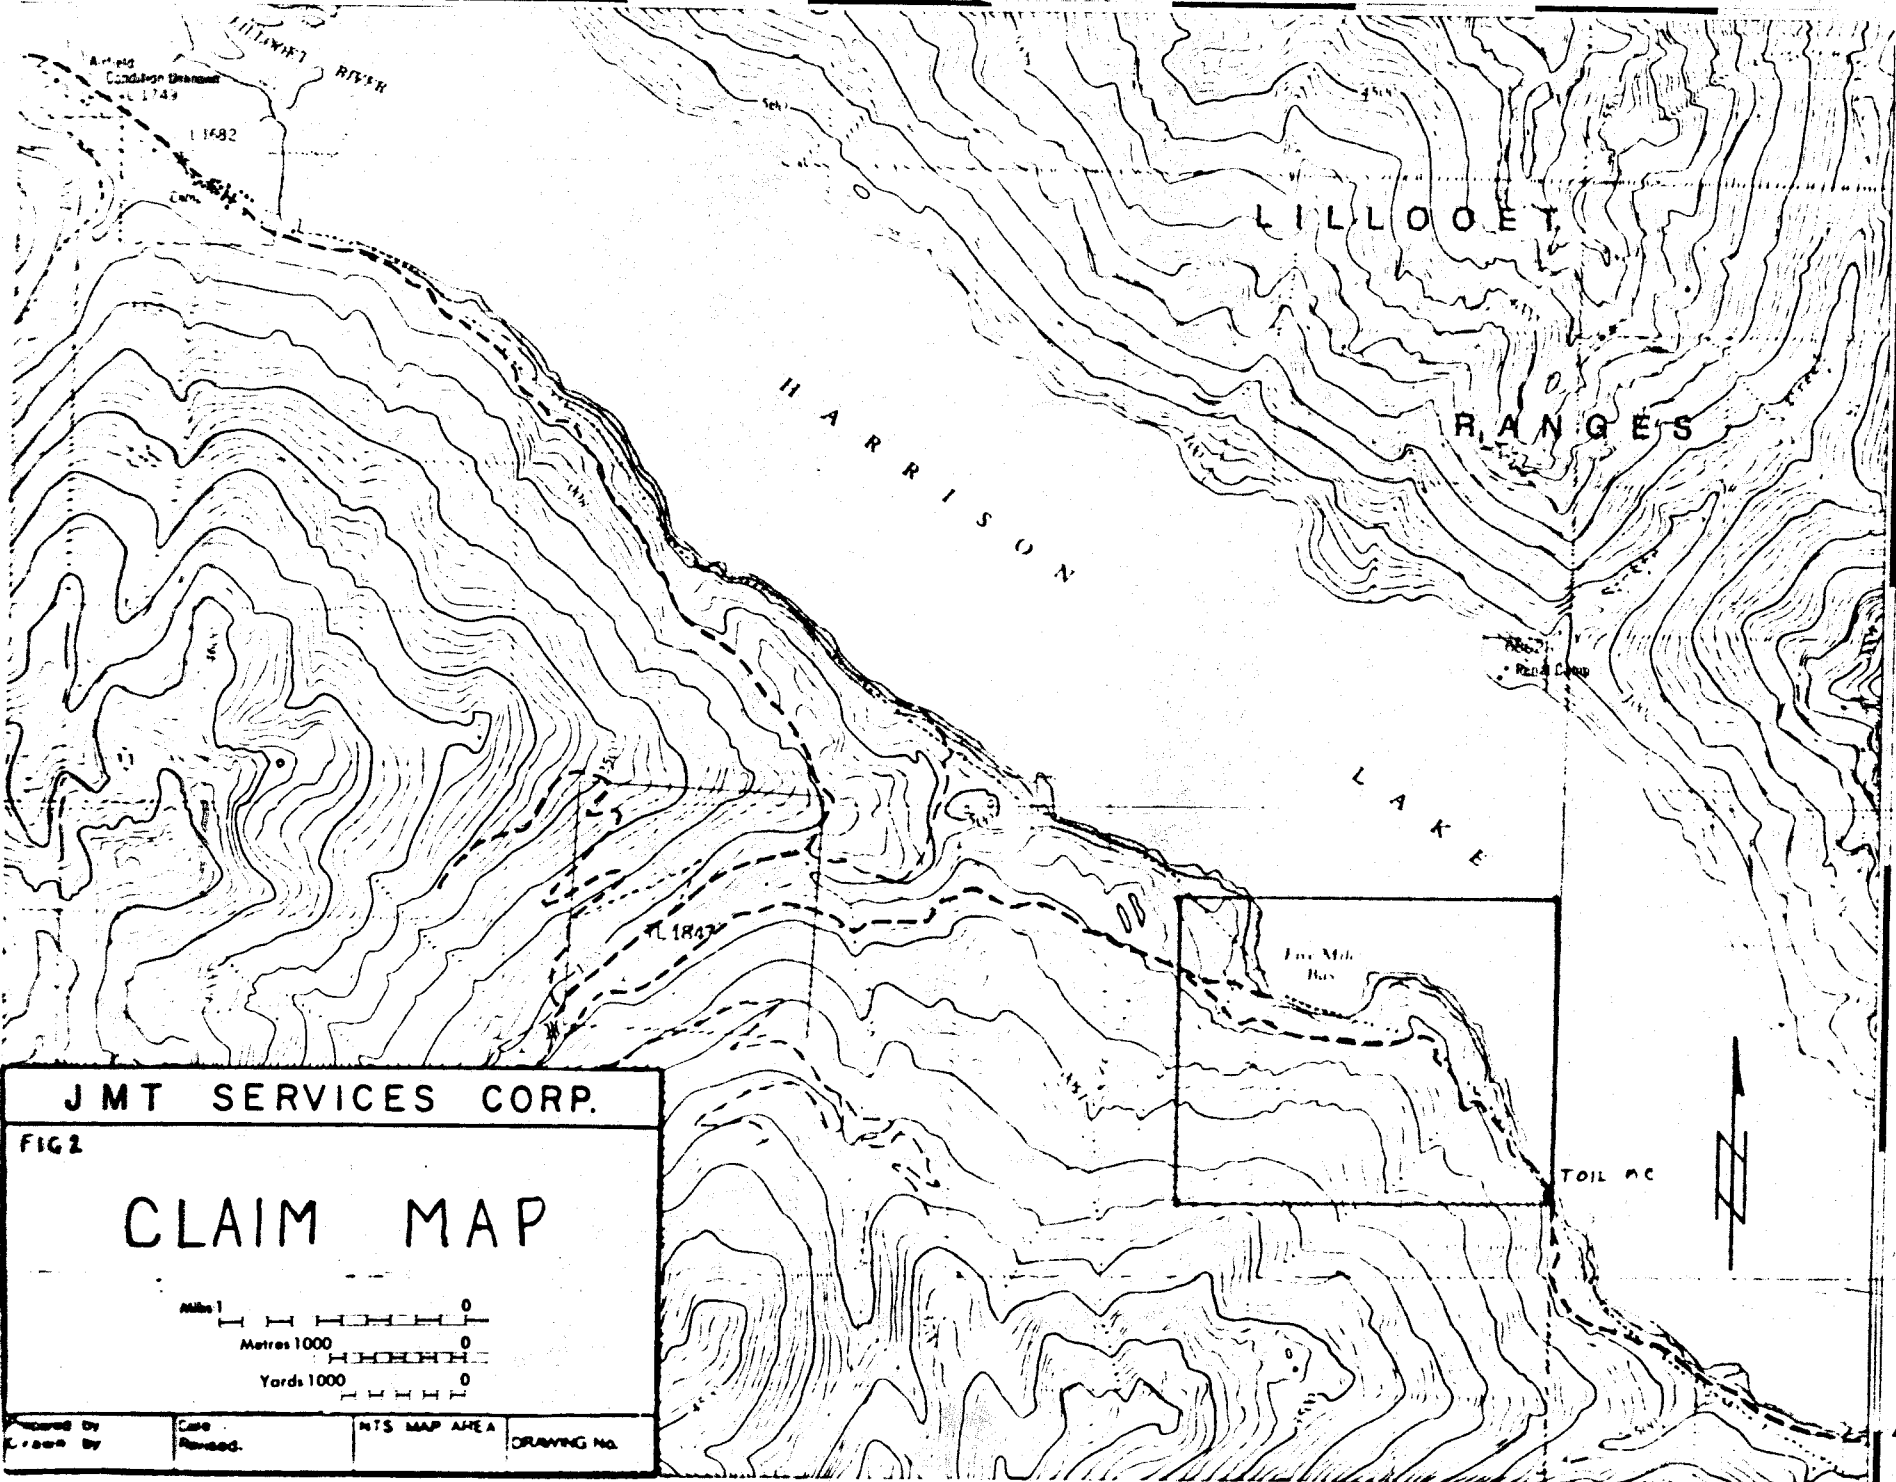

GEOLOGY

The claim area is underlain by the Fire Lake group volcanic and sedimentary rocks (Roddick, 1965). The main rock units in the claim area are

TOIL M.C.

FIG 2

CLAIM MAP

Prepared by	Checked by	NTS MAP AREA	DRAWING No.

green andesitic crystal tuffs, lapilli tuff and breccia interbedded with rhyolitic breccias and argillitic sedimentary rocks. This unit is quite diverse in lithology and no attempt has been made to map this unit in detail (see Recommendations). This rock unit locally is intensely altered to clay and sericite.

Overlying this unit is a massive cliff-forming dark grey andesitic-dacitic crystal tuff unit. This in turn is overlain by dark green andesitic crystal tuff. To the south of the claim area is a plug of feldspar porphyritic andesite.

ALTERATION

The central part of the claim area is underlain by a zone of intense clay-sericite alteration with 2-5 percent pyrite. This zone grades laterally to weaker alteration zones with the development of chlorite and lower pyrite content.

SURVEYS

A grid was established on the property for the purpose of control. Stations are marked every 50 meters. Samples were collected every 50 meters where conditions permitted. Rock chip samples were collected for assay in the alteration zone.

GEOCHEMISTRY

Soil samples were collected from the B soil horizon and placed in a kraft sample bag. Silt samples were collected from the active silt in the creek or seep. Chemical analyses were conducted by Chemex Labs, 212 Brooksbank Avenue, North Vancouver, B.C.. Gold determinations were made by neutron

activation following fire assay preconcentration. The base metals were determined by perchloric-nitric acid digestion and atomic absorption. A total of 471 soil, 14 silt and 153 rock chips were analyzed. *Gold determination of drill samples were done by standard fire assay.*

RESULTS

The gold geochem outlined an anomalous zone related to the intense alteration in rhyolite and sericite-schist. This zone is 900 m long and at least 150 m wide with values up to 344 ppb. This is contained in an alteration zone 1300 m long and up to 400 m wide.

Not all samples were run for base metals. There are strong lead anomalous values. Disseminated galena was found in dacitic volcanics northwest of camp. It is recommended that the soil samples which were only run for gold also be analyzed for lead-zinc-silver to help evaluate the massive sulphide potential of the property.

PERCUSSION DRILLING

In June 1984, L. Spence Enterprises percussion drill and D-6 cat were mobilized to the property by barge. Sites were prepared and drilling commenced June 14. In general recoveries from the drilling was poor due to the intense fracturing, causing loss of return circulation. Several of the proposed drill holes could not be completed and no samples were collected. The target zone has not been tested adequately and NQ or larger diamond drilling with a good mud system is recommended.

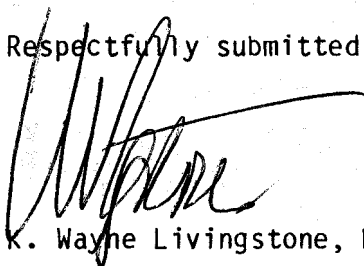

The drill results are tabulated in the Appendix and drill locations are shown on Figure 3 in pocket. Drilling was supervised by Mr. D. Reese and drill hole locations have been provided to the author by Mr. Reese.

RECOMMENDATIONS

The property has a sizeable alteration system mineralized with geochemically anomalous quantities of gold. The main mineralized structure which is in the vicinity of drill holes 1 and 2 was not tested. It appears that diamond drilling will be required to complete this test.

The massive sulphide potential of the property should also be evaluated further. The new prospecting find north west of camp requires detailed mapping and prospecting. The existing soil samples should be run for Pb-Zn-Ag.

Respectfully submitted,

K. Wayne Livingstone, M.Sc.

STATEMENT OF COSTS

PERCUSSION DRILLING

TIME

D. Reese, Supervision - June 14-20 7 days @ \$200 \$ 1,400.00

DISBURSEMENTS

Camp costs - 35 man days @ \$25 875.00

Truck rental--Travel Vancouver to property and return-twice--flat 600.00

Chemex assays 6,290.70

Freight--drill, dozer, drill samples 2,264.38

Telephone -- misc. 50.00

Drilling invoice - 2980 feet 20,860.00

Total \$32,340.08

STATEMENT OF QUALIFICATIONS

I, K. WAYNE LIVINGSTONE, of Vancouver, British Columbia, do hereby certify that:

1. I am a Professional Geologist working in British Columbia and residing at 6775 West Boulevard, Vancouver, B.C.;
2. I am a graduate of Carleton University, Ottawa; Ontario, with a B.Sc. (Honours) Geology, 1966;
3. I am a graduate of the University of British Columbia, with an M.Sc. Geology, 1968;
4. I have practised my profession as a Mining Exploration Geologist since 1965;
5. I am a member of the Geological Association of Canada;
6. I am a member of the Canadian Institute of Mining and Metallurgy;
7. This report is based on personal knowledge of the geology and mineral potential of the claim area.

AND I HAVE SIGNED,

K. Wayne Livingstone

APPENDIX I

DRILL LOGS

PERCUSSION DRILL LOGS

Hole #	Depth of Overburden	Bearing	Dip	Description
1	5'	180°	-60°	5'-10' pale creamy schist with 5% pyrite
1A	10'	180°	-60°	10'-20' as above
2	10'	180°	-60°	10'-30' blended andesite 70% with 5% pyrite green grey andesite 30% with 2% pyrite
2A	10'	180°	-60°	10'-30' as above
3	30'	180°	-60°	no samples
4	5'	180°	-60°	5'-100' mottled creamy white bleached andesite with 2-4% pyrite
5	5'	180°	-60°	5'-200' mottled green grey to moderately bleached andesite throughout 1-5% pyrite
6	10'	360°	-60°	10'-200' mottled green grey to moderately bleached andesite 5% pyrite
7	10'	180°	-60°	10'-75' 50% cream schist with 5-10% pyrite 50% mottled green grey andesite with 2-5% pyrite
8	15'	180°	-60°	15'-75' mixed green to white schist with 2-10% pyrite
9	15'	180°	-60°	15'-75' mixed green to white schist with 5% pyrite
10	10'	180°	-60°	10'-75' intensely altered rock. Pale green to white with 4-8% pyrite
11	25'	180°	-60°	25'-150' mottled green-grey to pale greenish white andesite with 2-5% pyrite
12	75'	180°	-60°	75'-150' green-grey to white altered andesite with 5% pyrite

Hole #	Depth of Overburden	Bearing	Dip	Description
13	60'	180°	-60°	No samples
14	10'	180°	-60°	10'-30' Grey-green andesite with 1-4% pyrite, 10% white fragments
