## INTRODUCTION

This report was prepared for Murjoh Resources Inc., Suite 705-543 Granville Street, Vancouver, B. C.

## HISTORY

From the " Report of the Minister of Mines ", 1915, K 322:

At the Calumet and Hecla, a property half a mile north-west of the town of Poplar, within a few hundred yards of the railway-track, development work was in progress this summer. On this property there is a mass of quartz, having a strike of N 45 degrees W, and a slight north-easterly dip some 20 feet wide-----several open-cuts have been made along the outcrop, and a shaft sunk thereon to a depth of 34 feet. Samples across the bottom of the shaft, No. 1-5 feet of quartz: gold .1 oz. ; silver 0.8 oz.; No. 2-3 feet of quartz, gold and silver, traces; No. 3-4 feet mixture schist and quartz: gold 0.15 oz.----

Two hundred and seventy feet down the hill north-easterly from the shaft, and some 40 feet below it, a crosscut was driven to tap the vein.

## SUMMARY AND CONCLUSIONS

Soil results have indicated areas in which further work should be done. A detailed grid should be extended up the slope from area "A". In area "B", isolated high silver and gold values should be checked, and detailed soil grids extended up the slope.

### PHYSIOGRAPHY

The Calumet claim group lies on the moderate to steep slopes west of Poplar Creek above the Lardeau River. The higher elevations on the Mobbs claim have many rock bluffs and slide areas. Some logging has been done on the lower slopes, but most of the claim area is still under tree cover.

### ACCESS

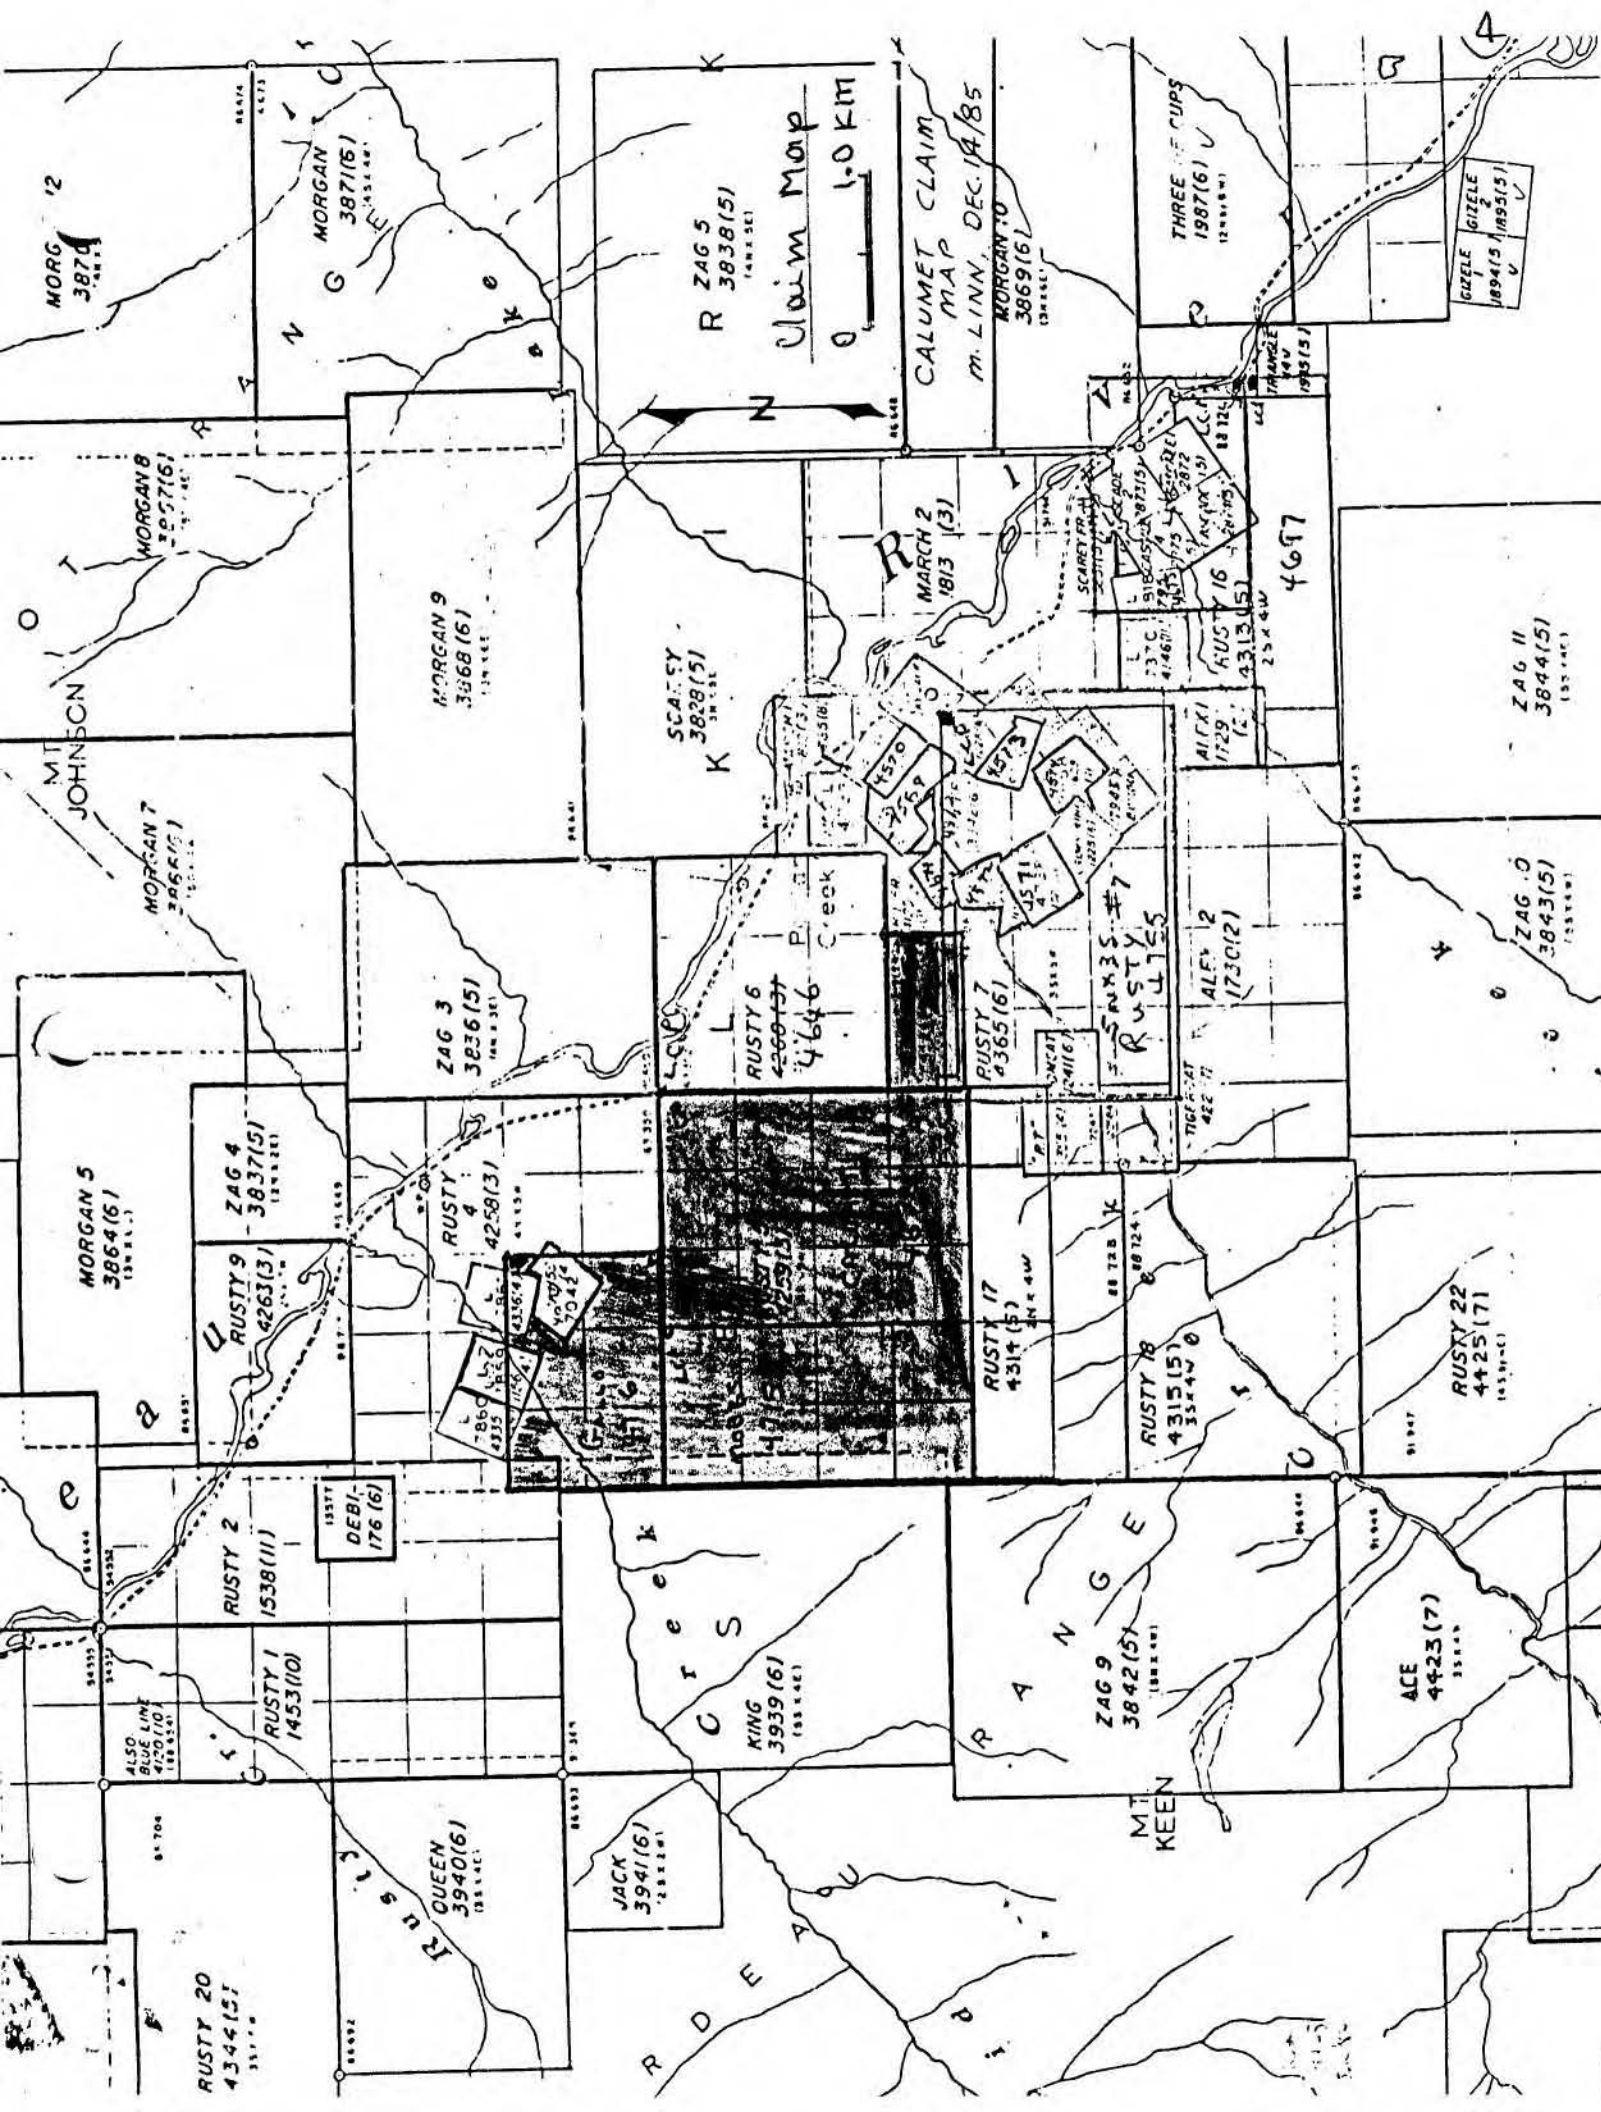

Access to the claims is by Highway 31 north from Kaslo to Meadow Creek on paved road, then to Poplar Creek on good all season gravel road, a distance of 30 kilometers. The NE corner of the Calumet is 2400 meters from the Poplar Creek bridge on Highway 31.

### PREVIOUS WORK

A description of some previous work from MM. 1915 is given under "History". Western Mines Limited did an extensive soil survey over the lower slopes in 1980, but did not go over 3500 feet in elevation in general.

### OBJECT OF WORK

The object of the work was to assess the potential of different areas on the claims, and to make a decision as to the direction of further work to be done. The location of anomalies from the previous work was also established.

CLAIMS

CALUMET	5S x 3W	15 units	MAY
GALLO	2N x 3W	6 units	JUNE
MOBBS	5S x 2W	10 units	JUNE
CALUMET 2	1S x 2E	2 units	OCTOBER
	TOTAL	33 units	

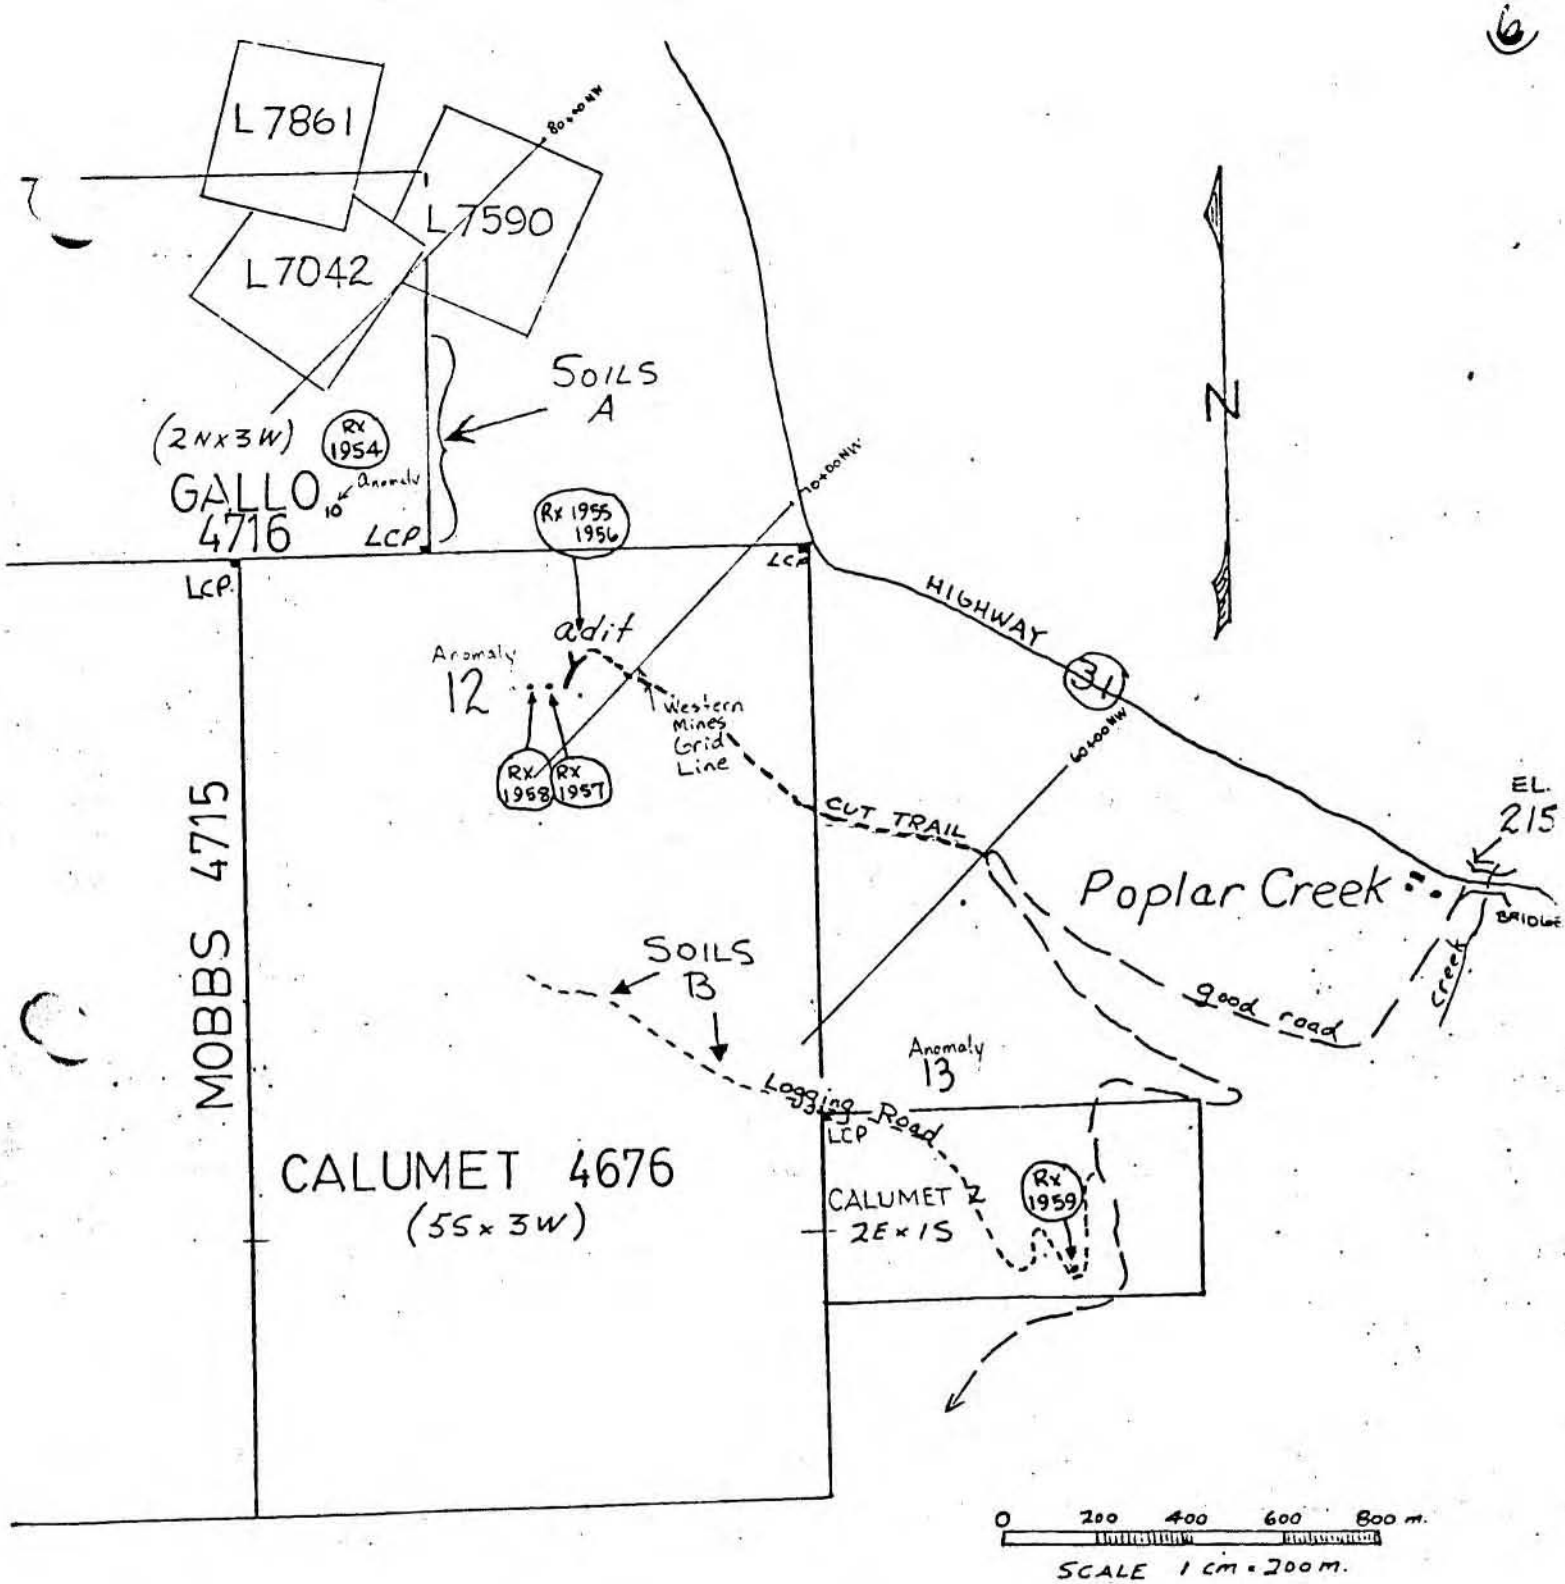

GEOLOGY

The Calumet claim area is underlain by Paleozoic rocks of the Index Formation. Limy chlorite schist, massive greenstone , phyllites, and phyllitic quartzite were the rocks most abundant in the areas worked. West of the adit, light to dark phyllites were noted. In the area of soils "B", greenstone was predominant.

There has been a number of open cuts and stripping done on the large quartz vein above the adit. Assays recorded in the Minister of Mines give values of 0.15 and 0.1 for different areas of the vein, and 0.1 oz. per ton gold in the schist. These were taken around the Calumet shaft which has not been found.

The best sample result was 0.016 oz/T gold taken on the Calumet 2.

SOIL GEOCHEMISTRY:

Soils were collected with a narrow spade from 15 to 30 cm below organic debris. Due to some logged area in "B", soils were coarse from samples 58 to 66 on line 1.

<u>Cu</u> background was under 50 ppm	50 and under	48 samples
	51 to 99	17 "
	over 100	2 "

<u>Zn</u> over 300 ppm was anomalous	under 100	32
	100 to 200	26
	200 to 300	5
	over 300	4

<u>Ag</u> over 1.0 was anomalous	.5 and under	56
	.6 to .9	8
	over 1.0	3

<u>Au</u> over 20 ppb was anomalous	5 and less	58
	10 to 20	7
	more than 20	2

A total of 67 soil and 8 rock samples were taken.  
Following is information on the method of analyses supplied by Chemex Labs.

ROCKSASSAY METHODS

Cu % :

A 2 gram sub-sample is digested in a hot perchloric-nitric acid mixture for two hours, cooled, then transferred into a 250 ml. volumetric flask. Aluminum Chloride is added as an ionization suppressant for Mo. The solutions are then analyzed on an atomic absorption instrument.

ASSAY METHODS

Ag, Au (oz/T) :

Silver and gold analyses are done by standard fire assay techniques. In the sample preparation stage the screens are checked for metallics which, if present, are assayed separately and calculated into the results obtained from the pulp assay.

0.5 assay ton sub samples are fused in litharge, carbonate and silicious fluxes. The lead button containing the precious metals is cupelled in a muffle furnace. The combined Ag & Au is weighed on a microbalance, parted, annealed and again weighed as Au. The difference in the two weighing is Ag.

## SOILS

Copper, Lead, Zinc, Silver ppm:

1.0 gm sample is digested with perchloric-nitric acid ( $\text{HClO}_4\text{-HNO}_3$ ) for approximately 2 hours. The digested sample is cooled and made up to 25 mls with distilled water. The solution is mixed and solids are allowed to settle. Copper, lead, zinc and silver are determined by atomic absorption techniques. Silver and lead are corrected for background absorption.

Detection limit: Copper, Zinc - 1 ppm  
Silver - 0.2 ppm  
Lead - 2 ppm

### GOLD FA-AA METHOD

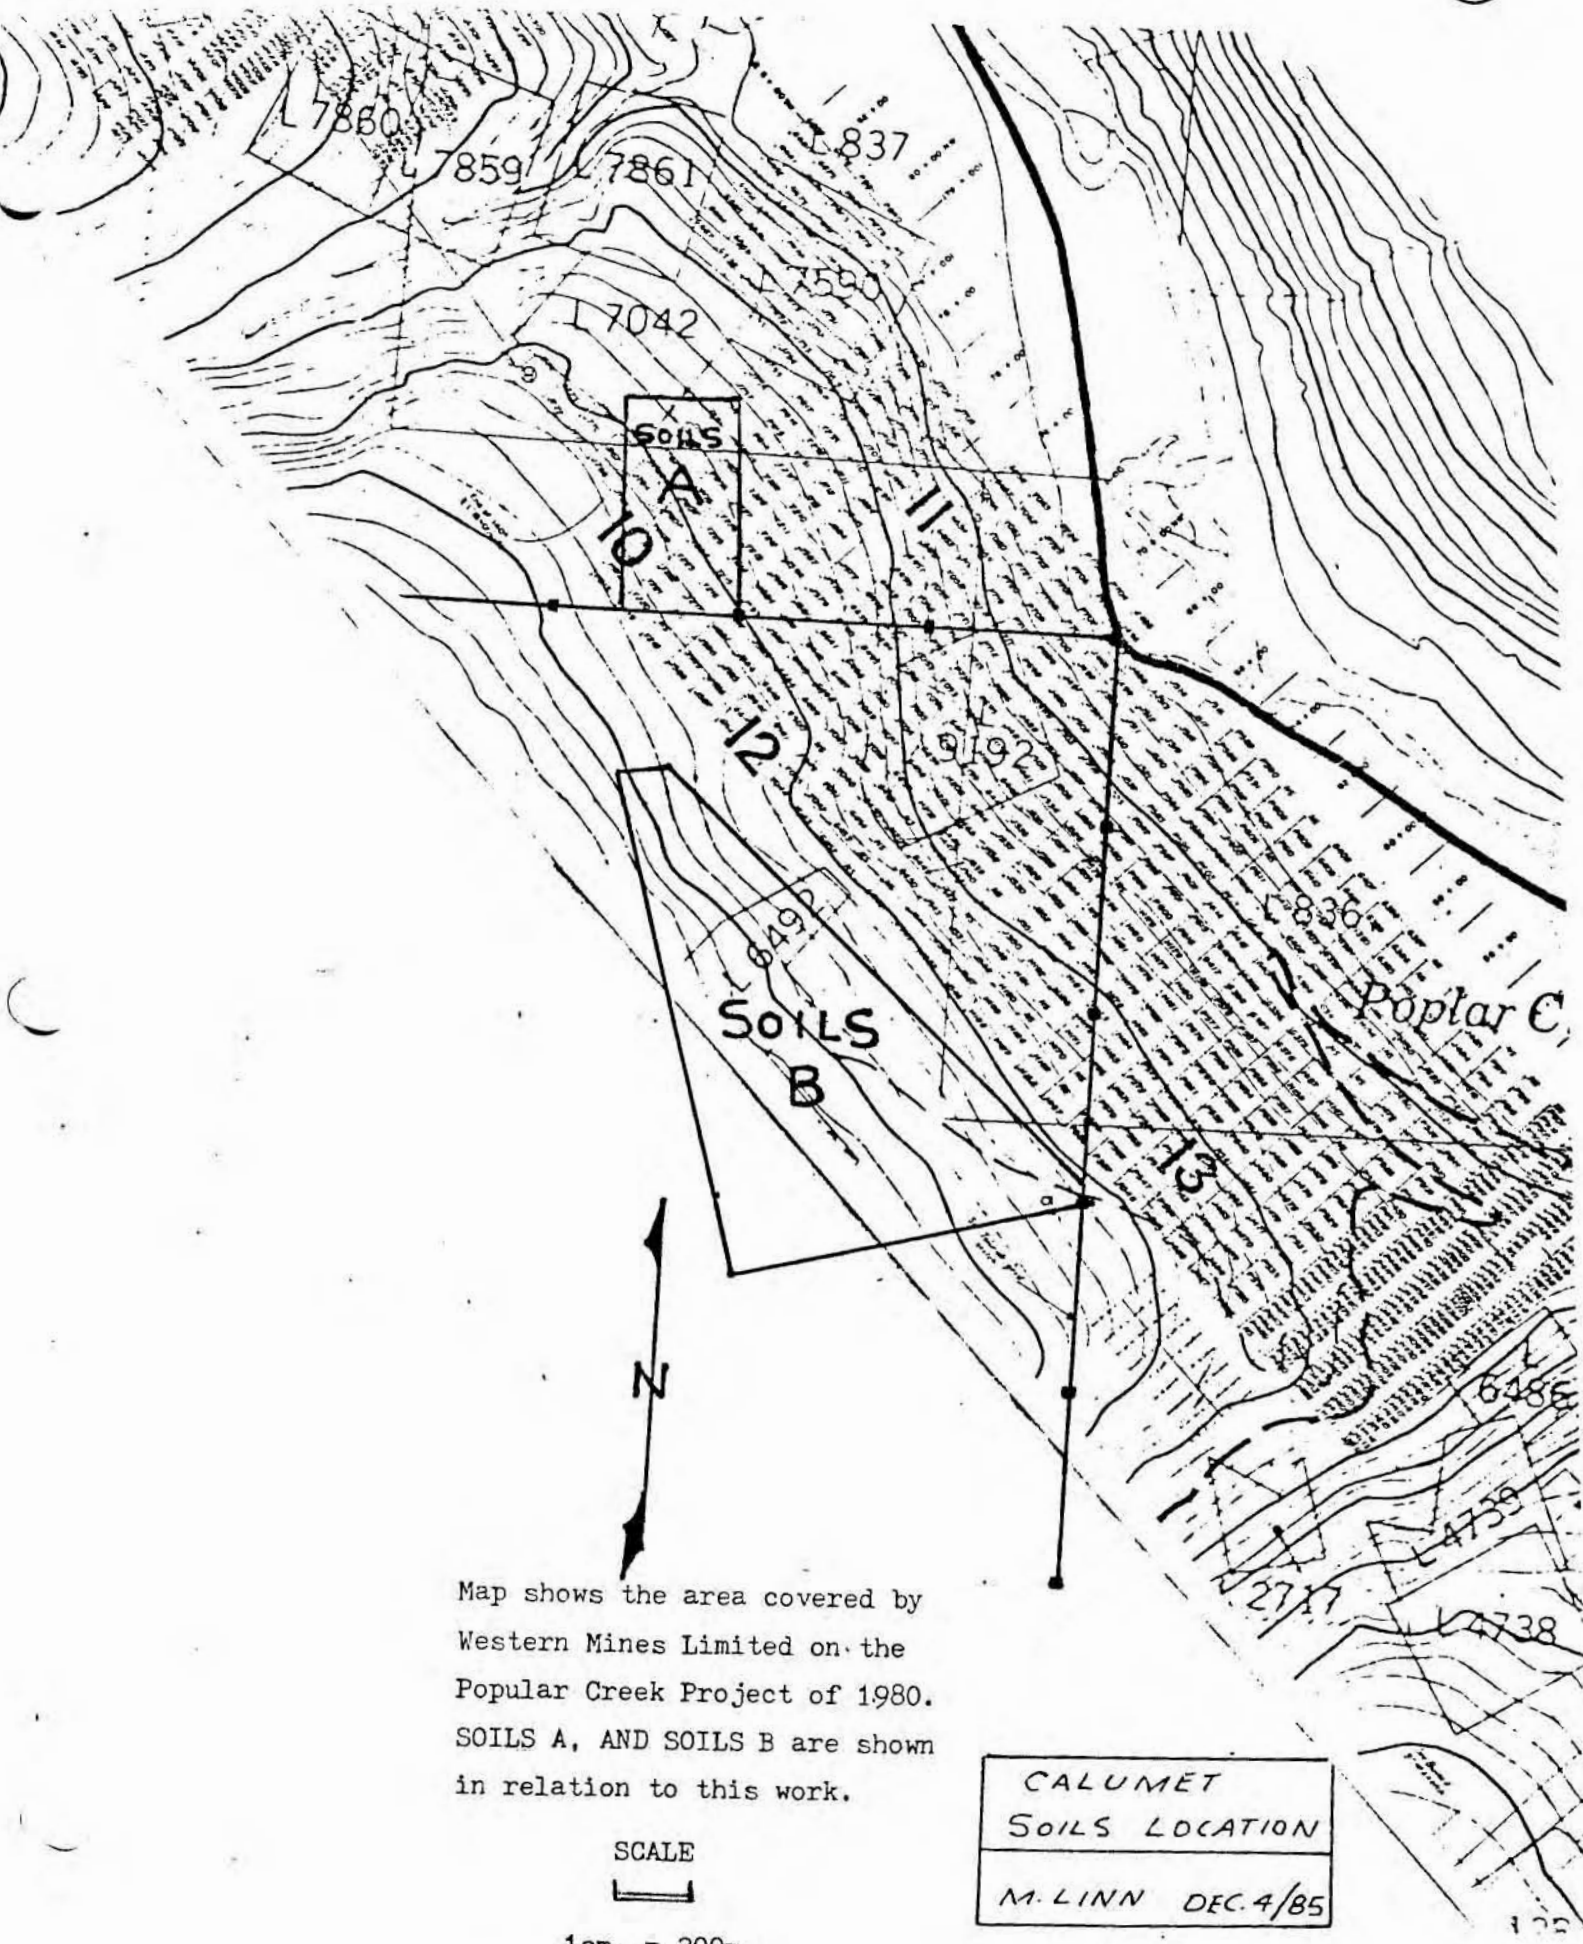

The sample fusion and cupellation is the same as the NAA-finish method.

Beads for AA finish are digested for 1/2 hr in 1 ml  $\text{HNO}_3$ , then 3 ml  $\text{HCl}$  are added and digest for 1 hour. The samples are cooled and made to a volume of 10 mls, homogenized and run on the AA against aqueous standards.

### ARSENIC PPM

A 1.0 gm sample is digested with a mixture of perchloric and nitric acid to strong fumes of perchloric acid. The digested solution is diluted to volume and mixed. An aliquot of the digest is acidified, reduced with  $\text{KI}$  and mixed. A portion of the reduced solution is converted to arsine with  $\text{NaBH}_4$  and the arsenic content determined using flameless atomic absorption.

Detection limit: 1 ppm

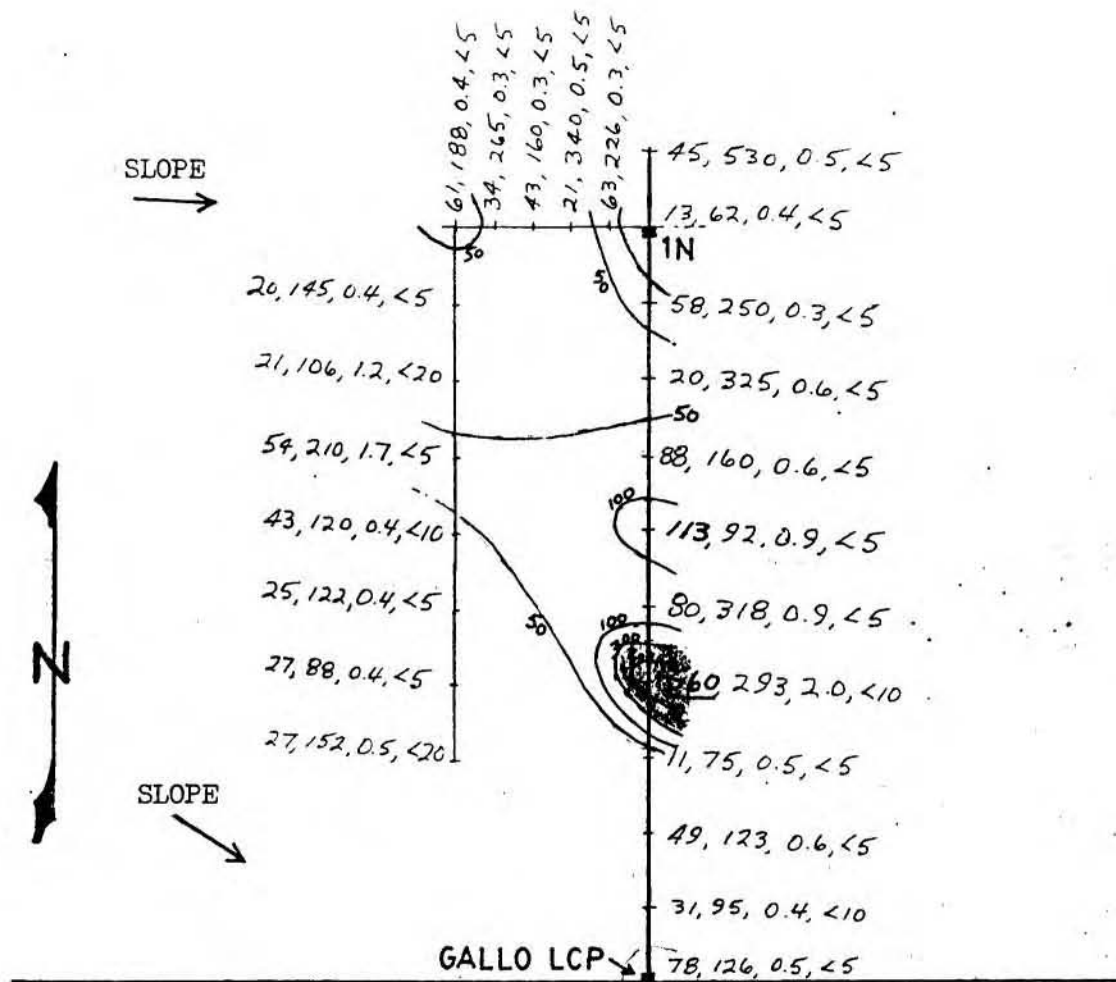

Map shows the area covered by  
Western Mines Limited on the  
Popular Creek Project of 1980.  
SOILS A, AND SOILS B are shown  
in relation to this work.

CERTIFICATE

I, Michael Linn, of the Village of Kaslo, Province of British Columbia, hereby certify as follows:

- I am a Geologist residing at 660 Arena Avenue, Kaslo B. C., with a mailing address of Box 422, Kaslo, B. C., VOG IM0
- I graduated with a degree of Bachelor of Science, Major in Geology, from the University of British Columbia in 1970.
- I have no direct, indirect or contingent interest in the securities of Murjoh Resources Inc.
- This report dated December 4, 1985 is based on personal field examination of the property and from assay information from the soil and rock samples collected during October and November of 1985

DATED at Kaslo, B. C. this 4th day of December, 1985.
