Drill Hole Locations

1. INTRODUCTION

The Phoenix 1 Group of mineral claims, comprising of 88 units, is jointly owned by Noranda Exploration Company, Limited (No Personal Liability) (51% interest), situated at 1050 Davie Street, Vancouver, B.C and Kettle River Resources, Ltd. (49% interest) of Greenwood B.C. Noranda is currently operating the property.

Between August 1st and August 12, 1985, the following 18 hole Vibracor Vibratory drill programme was undertaken in order to test the gold potential of the old Phoenix tailings.

2. LOCATION AND ACCESS

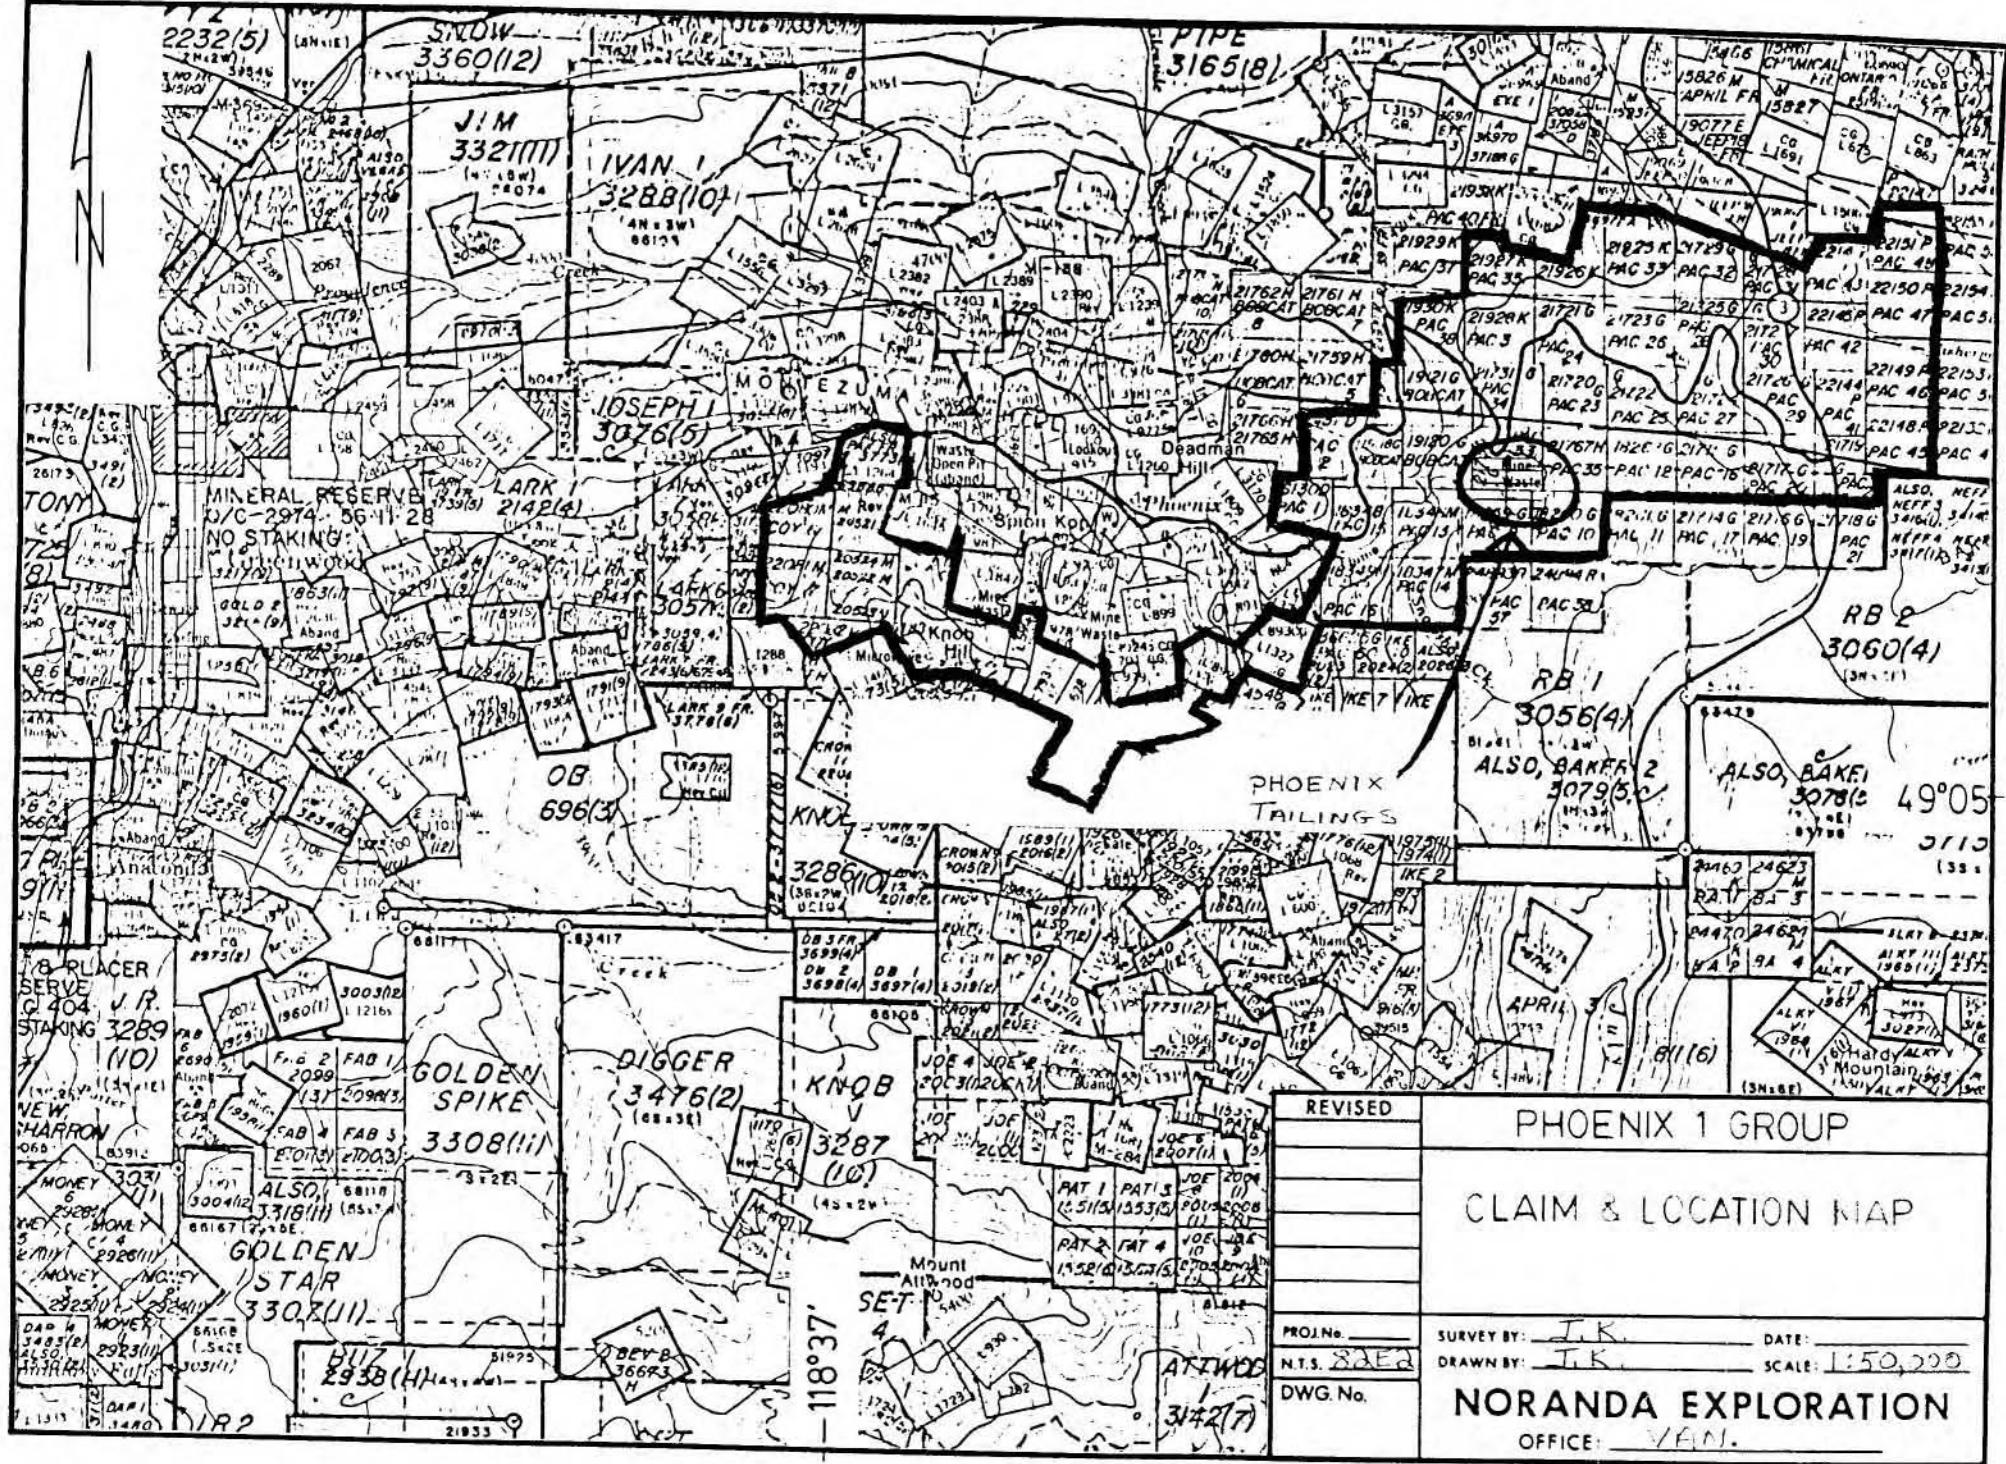

The Phoenix 1 Group of claims cover an area some 5 to 12 km east of Greenwood B.C. at longitude 118°33'W and latitude 49°06'N, within the Greenwood Mining Division, on N.T.S. mapsheet 82E/2E.

The old Phoenix tailings are centrally situated within the claim group and can be easily accessed by taking the Phoenix mine (Twin Creek) road for some 10 km east of Greenwood B.C.

3. TOPOGRAPHY AND VEGETATION

The Phoenix 1 Group is situated in gentle to relatively rolling hilly terrain, with a maximum elevation of 5183 ft (Knob Hill) and a minimum elevation of 3200 ft (headwaters of Fisherman Creek).

Southern slopes are often open with sparse spruce, whereas, northern slopes and creeks tend to be dense with a second growth of cedar, spruce and alders.

5. DRILLING

5.1 Methodology

All holes were drilled vertically and positioned on a grid with the majority at 100 metre square centres.

Survey control consisted of a metric chained grid with a 0.4 km north-south base-line and variable length east-west wing-lines. Stations were placed at 25 metre intervals on the wing lines.

Drilling was done with a Vibracor Vibratory drill mounted on an all terrain vehicle. Which is owned and operated by Noranda Exploration Company, Limited's (No Personal Liability) Winnipeg Office at 4 - 2130 Notre Dame Avenue.

Procedure consisted of "N"-size drill rods being vibrated into the tailings with samples retrieved in 5 foot intervals. Each sample was then vibrated into a 24" X 36" plastic bag which are currently being stored at Kettle River Resources trailer in Greenwood B.C.

Mixing of each sample was done by hand on a clean sheet of plastic.

Due to the large nature of the samples only 1/4 of each was taken and geochemically analyzed at Rossbacher Laboratory Ltd. of 2225 South Springer Avenue, Burnaby B.C.

The exception to the above sampling method was the preliminary or test hole, TL-1-85, in which the 0-20 foot interval was collected as a single sample in one bag. This sample was mixed by hand and then quartered with each quarter being quartered again. Resulting in four equal size sample (81660-81663) which each represent 1/16 of the 0-20 foot interval.

All samples were analyzed for parts per million (ppm) Cu, Ag, Zn, and parts per billion (ppb) Au. Holes TL-10-85 through TL-18-85 and TL-1-85 were also analyzed for ppm Pb.

Duplicate 1/4 size cuttings were randomly taken as a check for sample homogeneity, which proved to be quite consistent as seen in Table 2.

TABLE 2

COMPARISON OF SAMPLE AND DUPLICATE ANALYSES

Hole Number	Interval (ft)	Cu (ppm)	Ag (ppm)	Zn (ppm)	Au (ppb)	Pb (ppm)
TL-5-85	40-45	1160	2.2	74	350

Duplicate	40-45	1580	4.0	90	150	2

5.2 SAMPLE PREPARATION

Samples were dried at approximately 80°C and then sieved with a -80 mesh nylon screen. The -80 mesh (0.18 mm) fraction is then used for geochemical analysis.

5.3 ANALYSIS

Ag, Cu, Pb and Zn: 0.200 grams of -80 mesh material is digested in concentrated perchloric acid and nitric acid (3:1) at reflux temperature for 5.0 hours. A Varian-Techtron Model AA-5 or AA-475 Atomic Absorption Spectrophotometer is then used to determine the parts per million (ppm) silver, copper, lead, zinc and molybdenum in each sample.

Au: 10.0 grams of -80 mesh material is digested with aqua regia (one part nitric acid and 3 parts hydrochloric acid). The resulting solution is subjected to MIBK (Methylisobutyl Ketone) extraction, which extract is analyzed for parts per billion (ppb) gold using a AA-475 Atomic Absorption Spectrophotometer.

5.4 DISCUSSION OF RESULTS

Drill hole locations with their total length and gold geochemical analysis are plotted on Diagram 1.

Morphology of the tailings consists of two areas the dyke or berm and the pond which was completely dry on surface at the time of the drilling.

Both TL-6-85 and TL-12-85 bottomed in organic material which is believed to represent the subsurface or base of the tailings. All other holes did not intersect organics and are believed not to have reached tailing's subsurface.

Holes within the dyke or berm (TL-13, 16 & 17) were shallow as the material was too compacted and dry for drilling to depth.

Holes within the pond area generally descended through an initial 5-15 foot horizon of dry compacted fine material into a wet clay like or somewhat thixotropic substance for the remainder of the hole. This zonation gives the impression of there being lake of semifluid mud or clay overlain by a blanket or layer of compacted sand and silt.

Incomplete or short holes in the pond area were stopped by intersecting either an impermeable compacted layer of clay in the upper horizon or from the inability to retrieve a sample from the lower horizon due to suction created by the dense viscous material.

This suction causes the sample to be pulled back out of the rod as it is raised.

Geochemical analyses and sample intervals for each hole can be found in Appendix A. Statistical analyses per element for each hole and the combined holes are displayed in Appendix B.

Table 3 gives a summary of hole parameters as well as the arithmetic mean per element for each hole with a total and average for all holes.

TABLE 3

TABLE OF RESULTS (Duplicate samples are included in the statistics)

Drill Hole	Total Depth (ft)	# Samples	Arithmetic Mean of Geochem Analyses			
			Au (ppb)	Ag (ppm)	Cu (ppm)	Zn (ppm)
TL-1-85	28	6	401.7	2.4	1196.7	106.7
TL-2-85	48	10	376.0	2.3	1164.0	133.8
TL-3-85	40	8	436.3	2.3	1177.5	104.5
TL-4-85	25	5	238.0	2.2	964.0	88.4
TL-5-85	50	11	278.2	2.3	1052.6	78.9
TL-6-85	70	16	269.4	2.2	1120.0	77.0
TL-7-85	80	16	189.4	2.2	1065.9	80.4
TL-8-85	60	13	252.3	2.1	1078.5	84.6
TL-9-85	62	14	226.4	2.1	1142.1	80.8
TL-10-85	20	4	212.5	3.2	940.0	104.5
TL-11-85	5	1	330.0	3.4	1220.0	70.0
TL-12-85	32	8	223.8	1.8	836.3	70.5
TL-13-85	10	2	425.0	1.9	920.0	69.0
TL-14-85	8	2	394.0	2.4	970.0	62.0
TL-15-85	23	5	138.0	3.0	1140.0	81.2
TL-16-85	15	4	245.0	2.2	835.0	63.0
TL-17-85	5	1	720.0	2.8	1480.0	64.0
TL-18-85	48	11	129.1	3.3	1290.0	84.9
TOTAL/AVERAGE	629	137	304.8	2.4	1088.5	83.6
						6.7

As can be seen in Table 3, total as well as individual hole geochemical analyses for Au, Ag, Cu, Zn and Pb were low (i.e. subeconomic) with values being quite consistent throughout the holes.

There also appears to be no direct relationship between Au and any of the other elements.

Finally there appears to be no horizontal spatial relationship for Au, such as zoning, within the tailings as can be seen from the Au analyses plotted on the tailings plan map (Diagram 1).

6. SUMMARY AND RECOMMENDATIONS

Eighteen Vibracor Vibratory drill holes (TL-1-85 to TL-18-85) were drilled during August 1985, in order to test the old phoenix tailings gold potential.

Only two of the holes (TL-6-85 and TL-12-85) are believed to have reached the tailings base or subsurface. All other holes did not reach the tailings base as they were stopped short by either impermeable clay or inability to retrieve a sample due to down hole suction caused by dense viscous material.

Even though most holes were incomplete the majority of the tailings was tested and found to have subeconomic mineral potential for gold.

The only areas not fully tested by the drilling are the dyke or berm and the basal section of the tailings. The basal section was reached in two holes (TL-6-85, TL-12-85) increase in gold content.

If further testing is desired it is recommended that a reverse circulation drill be used.

STATEMENT OF COSTS

NORANDA EXPLORATION COMPANY, LIMITED

STATEMENT OF COST

PROJECT : PHOENIX 1

DATE

TYPE OF REPORT : DRILLING

a) Wages:

No. of Days 24 man days

Rate per Day \$ 95.50

Dates From: August 1 - August 12, 1985

Total Wages 24 x \$ 95.50 \$ 2,292.00

b) Food and Accomodation:

No of days 24

Rate per day \$ 63.28

Dates From: August 1 - August 12, 1985

Total Cost 24 x \$ 63.28 \$ 1,518.72

c) Transportation:

No of days 24

Rate per day \$ 19.12

Dates From: August 1 - August 12, 1985

Total Cost 24 x \$ 19.12 \$ 458.88

d) Instrument Rental:

Type of Instrument

No of days

Rate per day \$

Dates From:

Total Cost X \$

Type of Instrument

No of days

Rate per day \$

Dates From:

Total Cost X \$

f) Analysis (See attached schedule)	\$ 957.40
g) Cost of preparation of Report	
Author	\$ 191.00
Drafting	\$ 95.50
Typing	\$ 95.50
h) Other:	
Contractor : Noranda Exploration Company, Limited (No Personal Liability)	
Winnipeg Office	\$ 7,533.94
Total Cost	\$13,142.94

e) Unit costs for Drilling	
No of days 24	
No of units 191.72 m.	
Unit costs 68.55 / m.	
Total Cost 191.72 m x \$ 68.55	\$13,142.94
Grand Total	<u>\$13,142.94</u>

APPENDIX D
STATEMENT OF QUALIFICATIONS

STATEMENT OF QUALIFICATIONS

I, John Keating of the City of Vancouver, Province of British Columbia,
do hereby certify that:

I am a resident of British Columbia, residing at 1877 West 5th.
Avenue.

I am a graduate of Concordia University, Montreal, with a Bachelor
of Science Degree in Geology.

I am a member in good standing with the Canadian Institute of
Mining and Metallurgy.

I have been a temporary employee with Noranda Exploration Company,
Limited since May, 1979 and a permanent employee since March, 1983.

John Keating

Project Geologist
