## 1. INTRODUCTION

1.

On October 6, 1986, Bishop Resources Development Ltd. acquired all of the outstanding shares of Duthie Holdings Ltd., who leased and operated the Duthie Mine near Smithers, B. C. Duthie Holdings Ltd. was controlled by Mr. Paul Kindrat of Smithers, B. C.

Mr. Kindrat had mined on the Henderson/Hummingbird group of claims since 1979, from which he shipped hand-cobbled ore to the Trail smelter. In 1984, Mr. Kindrat, installed a 75 ton per day milling facility on the property, and had shipped concentrate to Trail. In 1986, Mr. Kindrat suffered from personal illness at which point Bishop acquired the operation.

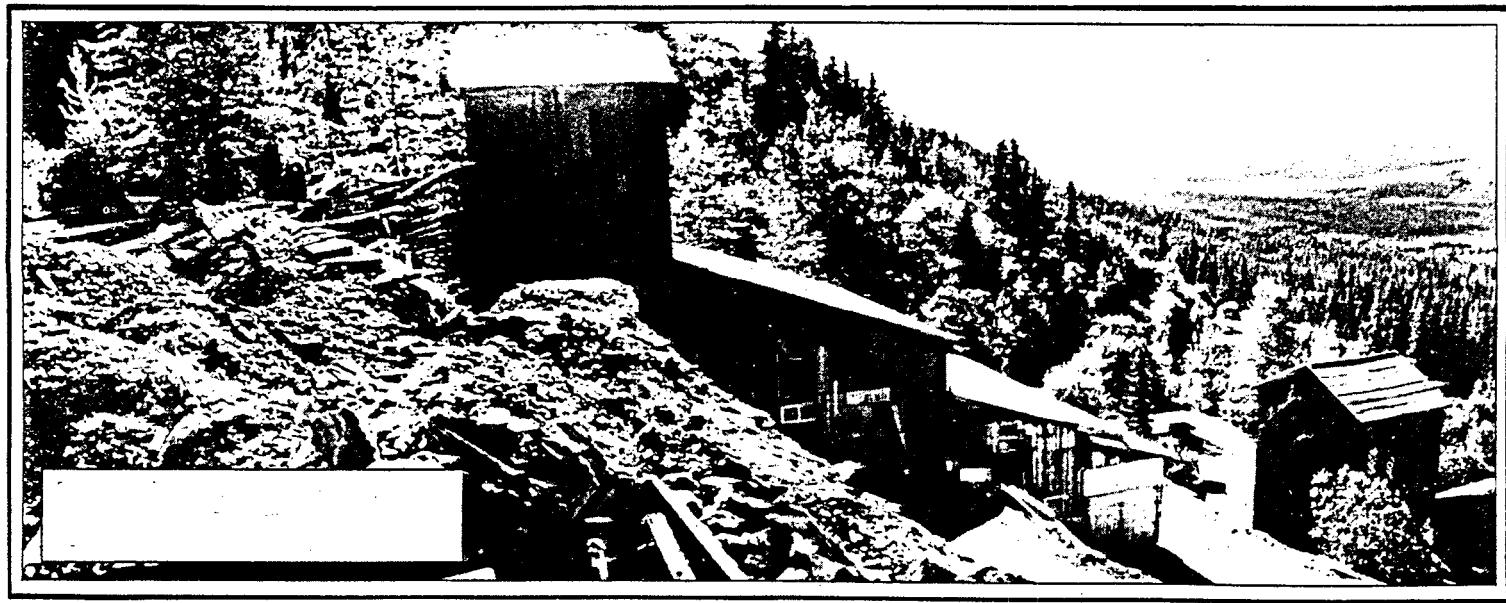

Mining was carried out on a more or less continuous basis but the mill operated when enough feed was established for a few days operation. At the time of Bishop's acquisition, the mine and mill was in operation but since the mill was not winterized, the mill ceased operations in November, 1986.

Bishop Resources Development Ltd. acquired Duthie Holdings Ltd. on a recommendation report, AN EXAMINATION FOR COMMERCIAL PRODUCTION, by Mr. Bryan Slimm, P.Eng., MineStart Management Inc., August, 1986. In his report, Mr. Slimm recommended blocking out of sufficient reserves to sustain a continuous mining operation and upgrading of the mining and milling facilities.

This recommendation has been followed and sampling has been carried out in areas shown on Figure 1. and 3. Approximately 6,500 tons are outlined for mining on the Fault Plane Vein. Mining by Mr. Kindrat had been carried out out

on the Ashman vein and it was decided by consultant Mr. Don Davidson, P.Eng., to drill on the Ashman to test for down dip and lateral extensions of the Ashman vein for continuous mill feed. Results are shown on Figure 2. with accompanying assay sheets.

Work is continuing on the property and consists of underground mapping, sampling, and further underground diamond drilling. It is hopeful that further work will enable the company to establish enough reserves to mine on a continuous basis and upgrading and winterizing the mill enable the company to operate the mill on a continuous basis also.

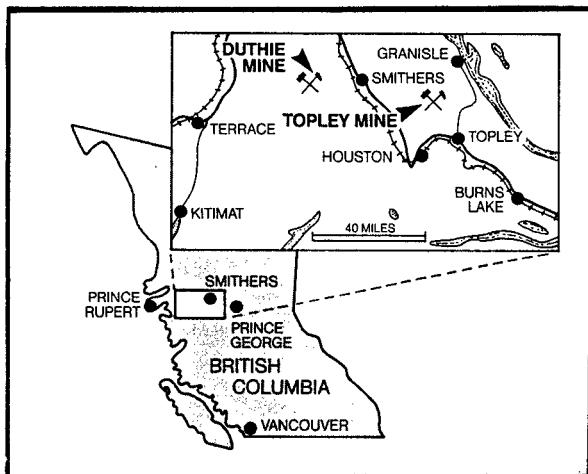

DUTHIE MILLING FACILITY, HUDSONS BAY MOUNTAIN

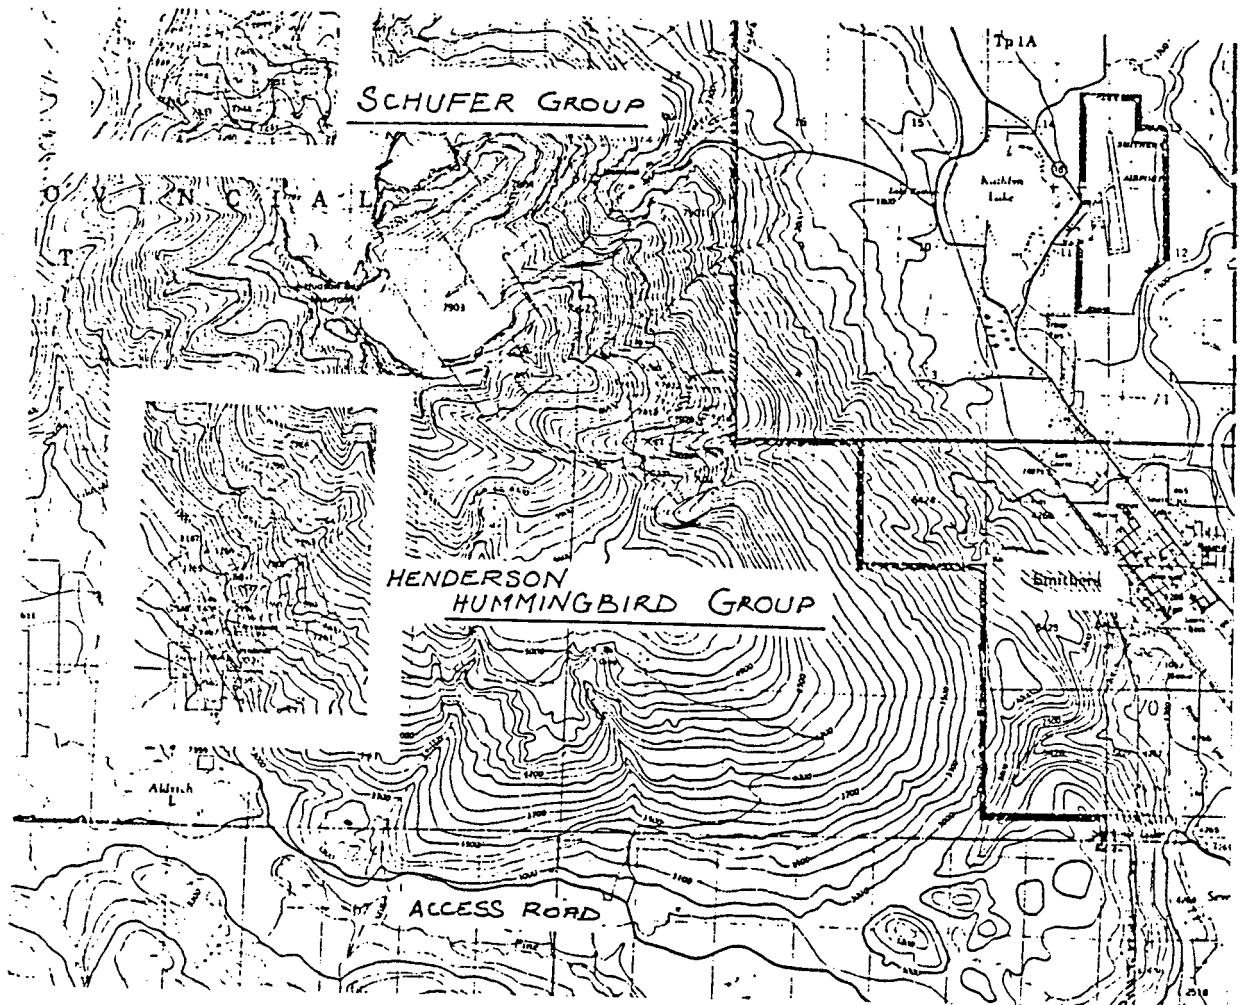

## 2. PROPERTY, LOCATION AND ACCESS

The Henderson/Hummingbird Group of claims are on the south-west slope of Hudson's Bay Mountain some 12 km west of Smithers, B. C. The latitude is about 54° 45' N and 127° 22' W. The NTS map reference is 93L/14. The property is in the Omineca Mining Division.

Access to the property is by an all-weather gravel road, in the direction of the Hudson's Bay Mountain ski area. The property is 6 km past the ski area and the road is maintained all winter. Generally, a two wheel drive vehicle is suitable for travel to the property, mine and mill.

DUTHIE MINE  
SCALE: 1:25,000

### 3. PREVIOUS WORK

There has been extensive previous work done on this property. The property has an eighty year history. Approximately 80,000 tons of ore have been mined on this property. Documentation is abundant and include detailed documentation in the British Columbia Minister of Mines Annual Reports, Geological Survey of Canada literature and company files.

### 4. PURPOSE

The purpose of this report is to document the underground exploration activities as related to costs to support Bishop Resources Development Ltd. application for a FAME grant with the British Columbia Government. Our program grant reference number is 10963M-18.

### 5. GEOLOGY

The geology of the Henderson/Hummingbird group of claims is well described in MINERAL RESOURCES, HAZELTON AND SMITHERS AREAS, CASSIAR AND COAST DISTRICTS, BRITISH COLUMBIA, by E. D. Kindle, 1954; Geological Survey of Canada, Memoir 223. The geology is also described in various British Columbia Minister of Mines Annual Reports.

### 6. DISCUSSION OF RESULTS

The results of the underground mapping program are not available at this time as the map is in the process of being drafted. The results of the underground

sampling are shown in Figures 1. and 3. with accompanying assay sheets. The results of the underground drilling are shown on Figure 2. with the accompanying assay sheets.

## 7. CONCLUSIONS

The company has outlined an area where there are 6,500 tons of material for mining on the basis of the Kindrat operation. Mr. Kindrat ran a successful operation by drifting on known veins. Drilling has shown that mineralization and structure continue laterally as well as down dip. This has given Bishop a basis for further underground exploration. Further work will be carried out in order to outline enough reserves to sustain a continuous commercial mining operation.

Respectfully submitted,

C. H. Stanley, B.Sc., Geophysicist.

President/Director

Bishop Resources Development Ltd.

8. CERTIFICATION

9.

I, C. H. Stanley, of Penthouse 5, 5775 Toronto Road, Vancouver, B. C.  
do hereby certify:

1. I am an exploration geophysicist, and have worked continuously as an explorationist since graduation in 1971.
2. I am a graduate of the University of British Columbia, with a Bachelor of Science degree in geophysics.
3. I am President and Director of Bishop Resources Development Ltd. and have been engaged principally on the company's projects in both exploration and financial affairs for the company.
4. The subject of this report was written from personal knowledge of the project and in consultation with Mr. Bryan Slimm, P.Eng., and Mr. Don Davidson, P.Eng.

C. H. Stanley

C. H. Stanley, B.Sc.
