## 1.0 SUMMARY AND CONCLUSIONS

The Ramcor Resources Ltd. Angie (1-6) mineral claims cover Jurassic Intrusive rocks and Triassic Quatsino limestone, Bonanza, and Kurmutsen Volcanic units. Interest in the area has been stimulated by recent exploration of the Sicker group volcanics to the east and south of Port Alberni, and by diamond drilling recently completed approximately 1000 feet to the west of the property west boundary.

The 1987 work consisted of a preliminary geochemical soil survey, and rock sampling of gossan and shear zone areas on the Angie #5 and #6 claims.

While some anomalous responses were obtained results were generally low.

## 2.0 INTRODUCTION

Ramcor Resources Ltd. owns the Angie (1-6) mineral claims situated straddling Cous Creek at approximately seven kilometers southwest of Port Alberni, B.C.

The property was located to cover favourable geology and known zones of alteration and shearing containing chalcopyrite, pyrite, and minor precious metals of silver and gold. No extensive history of exploration is recorded.

Recent work completed during February 1987, consists of the establishment of two survey grids, preliminary geology, and the collection of 370 soil samples and 15 rock samples for analysis for gold, silver and copper.

This report is a summary of the recent surveys.

## PORT ALBERNI PROJECT

### PROPERTY LOCATION MAP

ALBERNI MINING DIVISION  
BRITISH COLUMBIA

JOHN R. POLONI & ASSOCIATES LTD.

Drawn:	J.R.P.	Checked:	J.R.P.	Plan No.
Scale:	As shown	Date:	March 14, 1987	I.

### 3.0 LOCATION AND ACCESSIBILITY

The Angie (1-6) mineral claims are situated on the west side of Alberni Inlet approximately seven kilometers southwest of the town of Port Alberni.

Access from Port Alberni is westerly along Highway #4 towards Tofino, to the Sumass River bridge, and then southerly along logging roads to the Cous Creek road which cuts, diagonally, the westerly end of the claim block. Numerous logging roads of the MacMillan Bloedel Sproat Lake Division cross the claims making excellent access to much of the property.

### 4.0 CLAIM INFORMATION

The Angie (1-6) claims totalling 99 units, were located by Mr. D.J. Burton of Port Alberni between March 2-17, 1985 and recorded at Port Alberni on March 22, 1985. Claim data is as follows:

<u>Claim Name</u>	<u>No. of Units</u>	<u>Record No.</u>	<u>Expiry Date</u>
Angie #1	12	2528(3)	March 22/87
Angie #2	18	2529(3)	March 22/87
Angie #3	18	2530(3)	March 22/87
Angie #4	15	2531(3)	March 22/87
Angie #5	18	2532(3)	March 22/87
Angie #6	18	2533(3)	March 22/87
	99		

4.0 CLAIM INFORMATION, cont'd.

Ramcor Resources Ltd. controls the property by agreement with the owners.

5.0 PHYSICAL FEATURES

The property is situated on the westerly side of Alberni Inlet south of Sproat Lake. Maximum elevation occurs along the westerly boundary of Angie #5 at approximately 900 meters above sea level. The terrain is generally moderate over the easterly half of the claim block and steeper to the west. The main south-easterly flowing tributary creek of Cous Creek on the Angie #6 claim forms a deep gorge which is probably shear zone or fault related.

Much of the property is covered with reforested second growth timber. Active logging operations of the MacMillan Bloedel Sproat Lake Division were underway to the east of the west grid, and south and east of the east grid.

6.0 HISTORY

No history of exploration is known on the property although prospecting in 1985-86 in the Cous Creek area indicated the presence of alteration zones, shear zones and quartz filled frac-

6.0 HISTORY, cont'd.

ture zones containing pyrite, and chalcopyrite with minor gold and silver values.

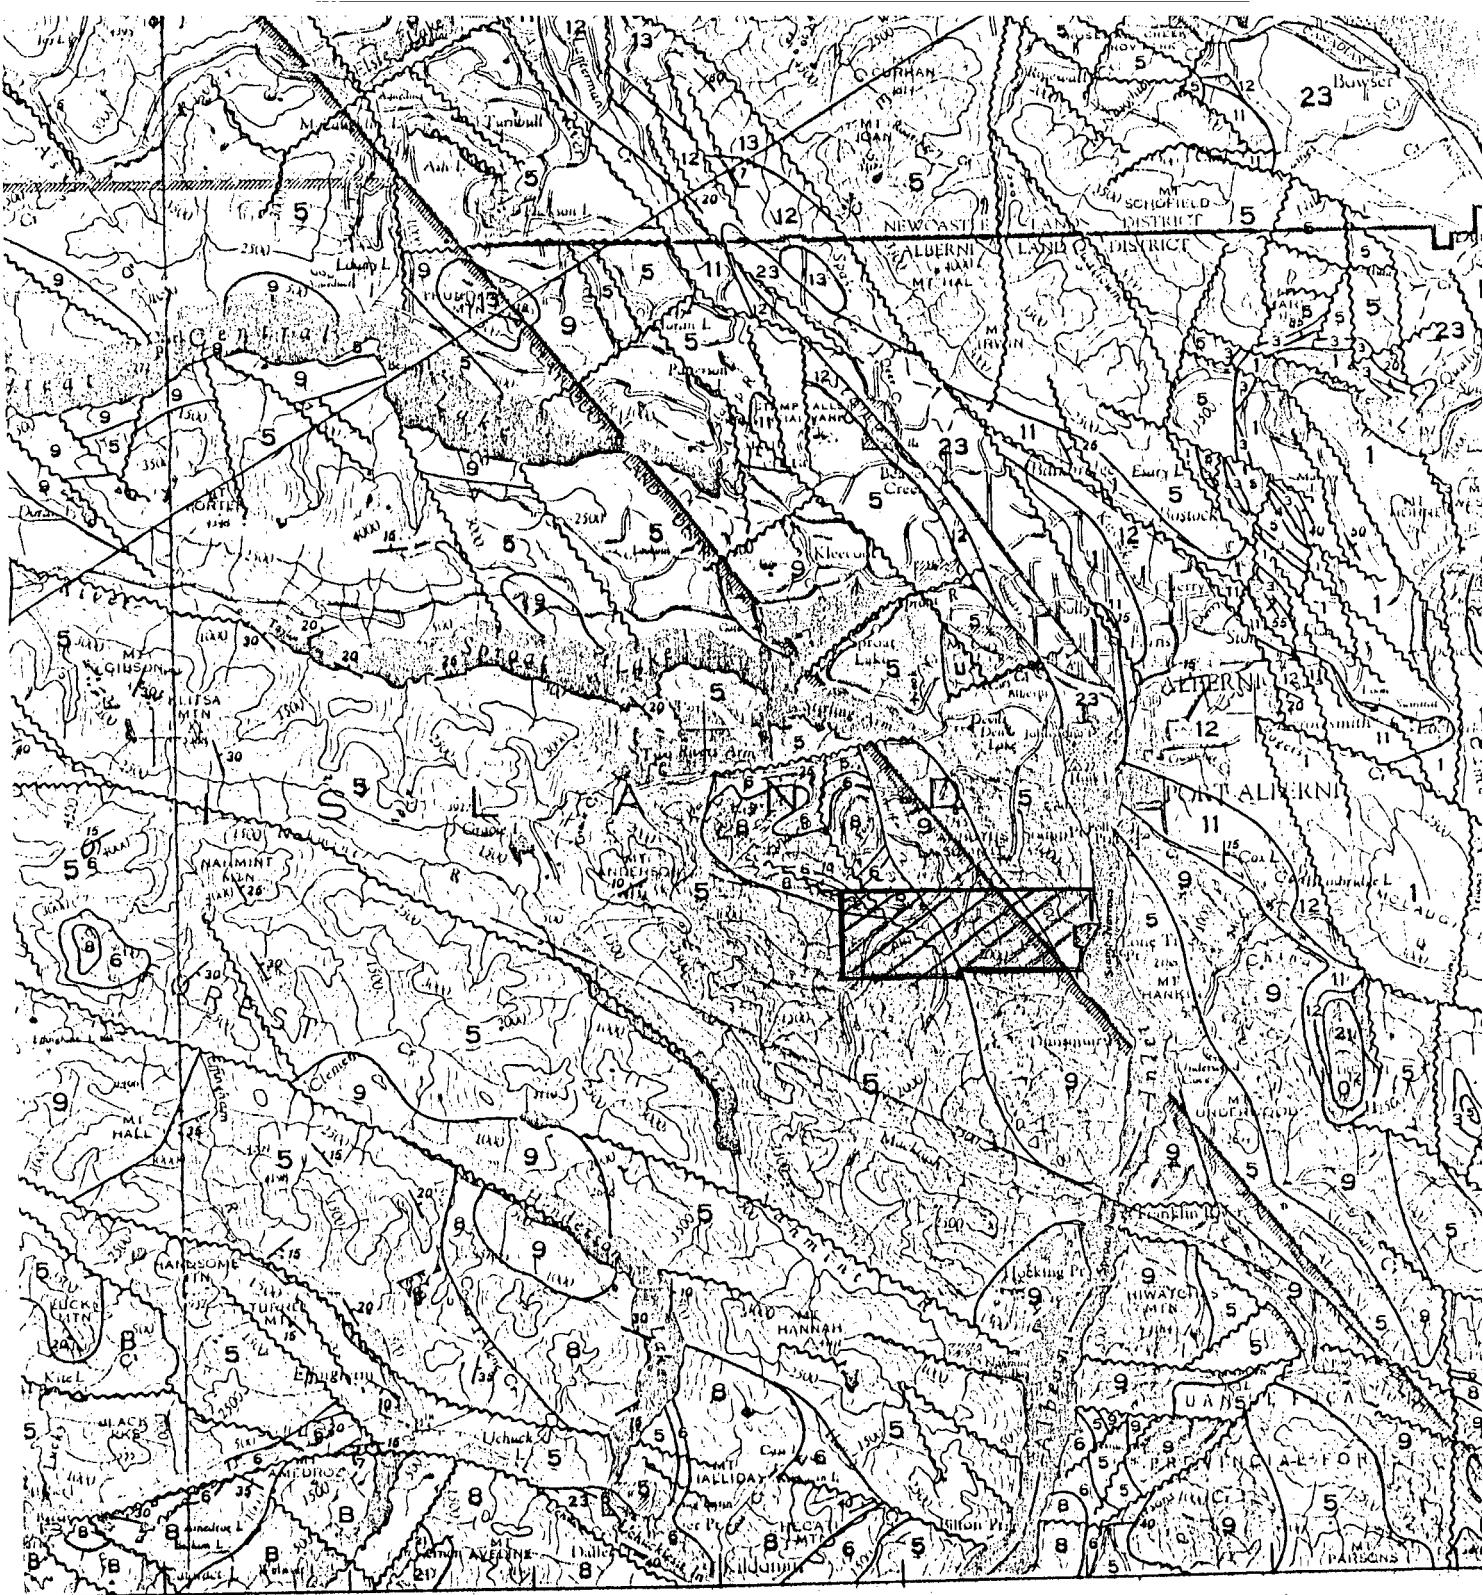

To the west of the property, approximately 800 -1000 feet, several diamond drill holes have recently (1986) been completed on the Amstar Venture. This work tested a north 30° east shear zone containing chalcopyrite with, reportedly, precious metals values.

The Angie claims are situated to the immediate west of the north end of the Sicker group volcanic belt of recent exploration interest. This belt of volcanics stretching from Port Alberni to Duncan has received much detailed evaluation in recent years.

7.0 GEOLOGY

The property covers Jurassic Island intrusive rocks of biotite-hornblende granodiorite and quartz diorite, in contact with Triassic Group Bonanza volcanics, Quatsino Formation limestone and Karmutsen volcanics. A major, northwesterly trending fault zone which is believed to be indicated by a tributary of Cous Creek, crosses the westerly part of the property.

Several alteration and shear zones were observed occurring in volcanics, containing varying amounts of sulfides of pyrite and chalcopyrite.

## 8.0 SOIL GEOCHEMISTRY - ROCK SAMPLING 1987

During the period February 8-21, 1987, a preliminary program of soil geochemistry and rock sampling was completed on the property. Two survey grids were established covering parts of the Angie #5 and #6 claims. These areas were chosen because of existence of shear and alteration zones in volcanic units which are known to contain copper bearing minerals with minor precious metals credits. The locations of the grids are shown on Plan #2 appended.

In the survey, east-west base lines were established with grid lines running north-south at 100 meter intervals. Sample stations were established at 50 meter intervals. B-horizon material, was collected from each sample location using a mattock, and placed in kraft sample bags for delivery to Min-En Laboratories in Vancouver for analysis for copper, silver and gold. Three hundred and seventy soil samples were collected and analyzed using Cu, Ag-acid digestion-chemical analysis, Au-fire assay.

Fifteen rock samples were cut from gossan shear zone, alteration zones and quartz filled shear zones with thirteen being collected from the south side of Cous Creek on the east grid.

Sample locations and results of the surveys are shown on Plans 4-11 included in Appendix D.

## 9.0 RESULTS OF THE SURVEYS

Anomalous parameters were calculated for gold, silver and copper as follows:

	<u>Mean</u>	<u>Anomalous</u>
Gold	6.6 PPb	13.0 PPb
Silver	0.57 PPM	1.14 PPM
Copper	81 ppm	162 ppm

East Grid results for gold and silver are generally low. Six anomalous results were obtained for gold with a high of 30 ppb.

Several single and multiple station anomalies are indicated for copper, but results are low. The best response was obtained near the south end of lines 10,000E and 10,600E where a three station anomaly is indicated.

West Grid results for gold and silver are low with a single station anomaly of 60 ppb for gold being obtained but no anomalous silver results. Results for copper show several single and multiple station anomalies with the highest being a single station 400 ppm anomaly.

Rock samples collected are described as follows:

<u>No.</u>	<u>Description</u>	<u>Assay Data</u>		
		<u>Au oz/T</u>	<u>Ag oz/T</u>	<u>Cu %</u>
#1	Sulfides Py in Volc 0.6 m wide	0.001	0.01	0.002
#2	Sulfides to 50% Py 0.6 m	0.001	0.01	0.009
#3	Shear zone - sulfides 0.6 m	0.001	0.05	0.002

9.0 RESULTS OF THE SURVEYS, cont'd.

No.	Description	Assay Data		
		Au oz/T	Ag oz/T	Cu %
#4	Along shear zone with 50% sulfides (py) & quartz	0.001	0.01	0.018
#5	Altered (gossan) in volcanics <u>+5.0 m</u>	0.001	0.01	0.094
#6	Altered volcanics shear zone (py)	0.001	0.01	0.025
#7	Altered volcanics with epidote 1.0 m	0.001	0.01	0.012
#8	Shear - gossan zone massive sulfides 1.5 m	0.001	0.01	0.003
#9	Shear - gossan zone massive sulfides 0.5 m	0.001	0.01	0.008
#10	Shear - gossan zone 0.5 m	0.001	0.01	0.013
#11	Quartz stringer zone shear	0.001	0.01	0.010
#12	Gossan, py 2.0 m	0.001	0.01	0.013
#13	Shear - gossan massive sulfides 0.5 m	0.003	0.04	0.001
#14	Shear - gossan	0.001	0.06	0.016
#15	Shear - gossan	0.001	0.02	0.002

## 10.0 RECOMMENDATIONS

The results of the work completed on the west and east grid areas are not encouraging. While some anomalous areas are indicated in geochemical surveys these do not appear strong enough to require follow-up surveys.

Much of the property remains unexplored and a modest program of prospecting using the existing logging roads as a control base, may prove beneficial.

Certificate

CERTIFICATE

I, John R. Poloni, of 5502 - 8B Avenue, in the Municipality of Delta,  
in the Province of British Columbia,

DO HEREBY CERTIFY THAT:

1. I am a Consulting Geologist.
2. I am a graduate of McGill University of Montreal, Quebec, where I obtained a B.Sc. Degree in Geology in 1964.
3. I am a Registered Professional Engineer in the Geological Section of the Association of Professional Engineers of the Province of British Columbia.
4. I have practiced my profession since 1964.
5. I am a Member of the Canadian Institute of Mining and Metallurgy.
6. I have personally visited the property during 1987 surveys.
7. I have no interest in the properties and securities of Ramcor Resources Inc. nor do I expect to receive or acquire any.
8. I consent to the use of this report by Ramco Resources Inc. in a submission to the Vancouver Stock Exchange and/or the British Columbia Superintendent of Brokers, and to distribute all or parts of the report to the shareholders or other interested parties provided that the meaning is not altered by partial quotes.

Dated this 14th day of March, 1987.
