INTRODUCTION

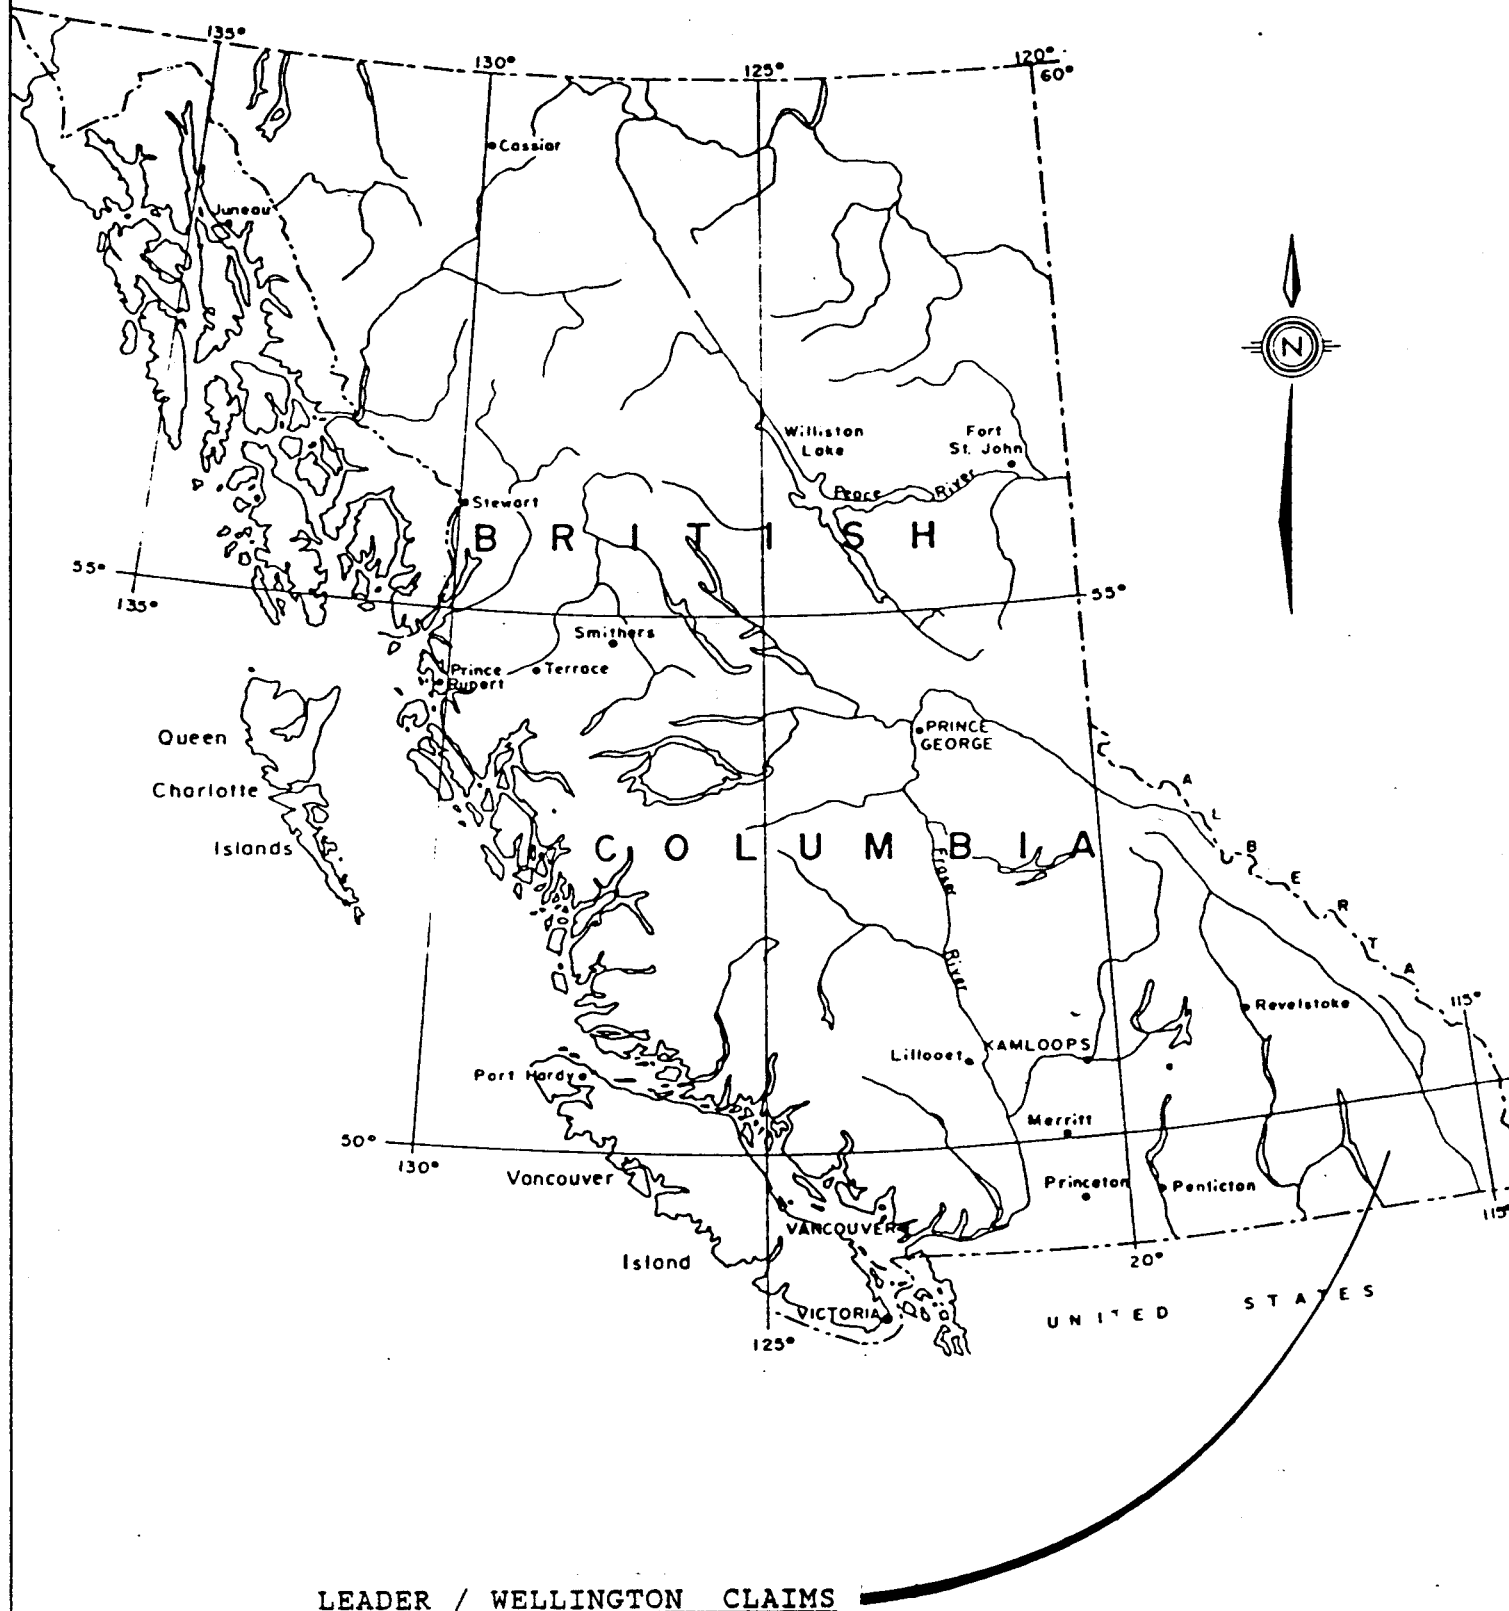

This report was written at the request of Donnex Resources Inc. The property consists of two claims, the Wellington (rec. #1590) and the Leader (rec. #1834). Donnex Resources owns 100% interest in these properties. The report is based on geochemical data and observations made during the sampling process.

The Wellington and Leader mineral claims are located 30 km. west of Cranbrook within two kilometers east of Angus Creek. Perry Creek is 5 km. to the east (see property location map). The property can be accessed from Cranbrook, north along Highway 95-A for 20 km. and west for 15 km. A main logging road is then followed south up the east side of Angus Creek where the Leader/Wellington claims are located. The claims are located at approximate latitude 49°33'N by longitude 116°08'W on NTS map sheet 82F/9E.

The geochemical survey was carried out over several stages with each stage designed to either expand or delineate any new anomalous zones.

GENERAL GEOLOGY

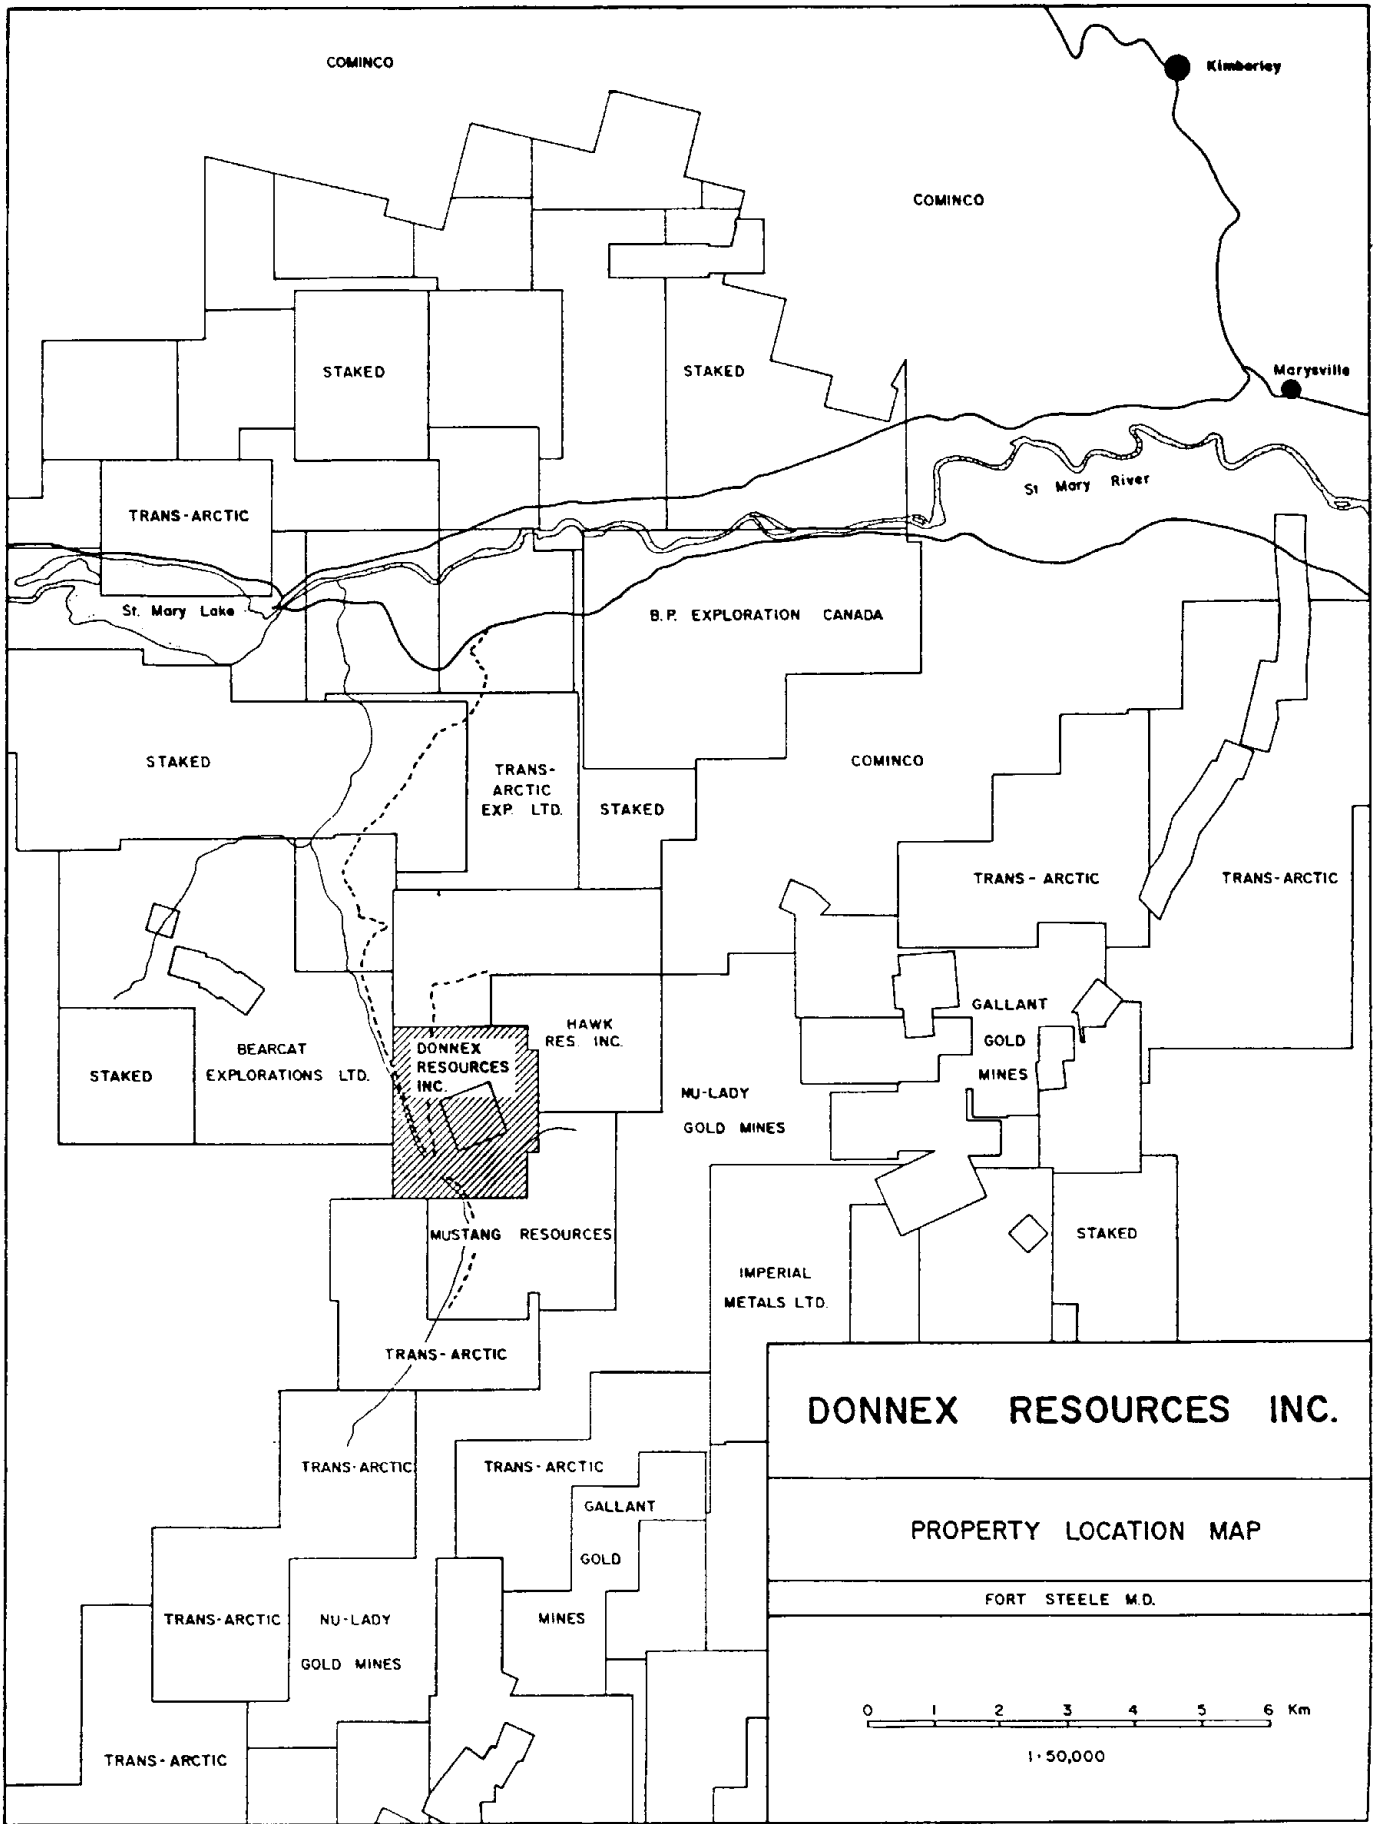

The Wellington/Leader claim group is underlain by three main rock units. The argillites and quartzites of the Creston Formation are the oldest units on the property. This formation is overlain by the Kitchener-Siyeh Formation which consists mainly of dolomitic argillites. Both of the above mentioned Formations are of Proterozoic age. The contact between these two formations is a NNE-trending fault known as the Sawmill Fault which has indications of a right strike slip fault. The Sawmill Fault is the localizing structure for the mineralization of the Au-Pb-Cu bearing Leader Vein. The third rock unit is a granodiorite that is pegmatitic in places and is of Mesozoic or possibly Cenozoic age. This granodiorite/pegmatite occurs mainly on the western portions of the property but smaller outcrops do occur in other locations. It is considered by J. Harris (report dated August 14, 1986) that much of the Wellington/Leader area "may constitute a 'roof zone' with felsic intrusive material present at relatively shallow depths below the sediments". A fourth unit, the Moyie Intrusion is a lower Cambrian unit which is commonly found north of the St. Mary's Fault, was found parallel to a NNE trending quartz vein in the form of a dyke approximately 1.0 metres wide.

LEADER / WELLINGTON CLAIMS

PROPERTY LOCATION MAP

GRID ESTABLISHMENT, SAMPLING AND LABORATORY METHODOLOGY

A grid was established over the Wellington/Leader claims with stations established every 25 metres on lines 100 metres apart. This grid was established by using compass and 'hip' chain. The base line was put in using 1.5 metre stakes (painted red) running north-south. Cross lines were flagged every 25 metres running east-west for 1000 metres each side of the base line. The extreme east and west boundaries of the lines were also checked for the correct spacing of 100 metres. Control points were located by using the Legal Corner Post (LCP), air photos and topographic maps. The grid was put in during the Sept. 2 to 16 trip (see itemized cost statement).

An older grid (established in 1985) has also been plotted on the two maps with the corresponding geochemical data. This grid has been abandoned in favour of the newer, larger, and more comprehensive grid described above.

A total of 430 samples were taken every 25 metres over the established grid. All samples were taken from the 'B' horizon which was usually found less than 6 cm. below the surface. The sampling was done in stages to help locate and further delineate anomalous zones known from previous work. A total of 23 rock samples were collected during the 1986 season with their locations also plotted on the maps, ie. GS-86-44.

The samples were analyzed by Acme Analytical Laboratories Ltd., Vancouver, B.C. The samples were tested for 30 elements using Inductively Coupled Argon Plasma (ICP). The rock samples were pulverized to -100 mesh and dried. A 0.5 gram sample was digested in hot diluted aqua regia (3 ml) in boiling water bath (90°C) and diluted to 10 ml. with demineralized water. Gold was determined from Atomic Absorption (10 gram sample).

CONCLUSION

The results for gold and lead tend to outline areas that warrant further work. It appears that additional sampling and possibly trenching over selected areas will help further delineate the anomalous zones. The rock samples also show interesting values of gold, lead and zinc which will also be looked at more closely during the coming season.

ITEMIZED COST STATEMENT

Sept. 2-16, 1986 - 54 km. of grid established

| | | |
|--------------------------|-----------------------|------------|
| A) Wages- Geologist | @ \$250/day (15 days) | \$ 3750.00 |

GORDON S. ARCHER - QUALIFICATIONS

- 1) I am a graduate of the University of Victoria with a Bachelor of Science Degree (1980 - Physical Geography).
- 2) I have subsequently completed the Geology Program at the University of British Columbia.
- 3) Geology Work Experience :
 - Assistant Geologist with the B.C. Ministry of Energy, Mines and Petroleum Resources, Project Geology Dept. 1980-1981.
 - Intermediate Field Geologist with Petro Canada (Coal Division) - 1982.
 - Self-employed - worked for several Vancouver based resource companies and with various geological engineers throughout the season - 1983.
 - Employed by Geotech Resources Inc. as a Geologist and Computer Programmer.
 - Currently self-employed and working on several projects throughout southern B.C.

Gordon Archer

APPENDIX A

GEOCHEMICAL ICP ANALYSIS

.500 GRAM SAMPLE IS DIGESTED WITH 3ML 3-1-2 HCL-HNO3-H2O AT 95 DEG. C FOR ONE HOUR AND IS DILUTED TO 10 ML WITH WATER.
 THIS LEACH IS PARTIAL FOR MN.FE.CA.P.CR.MG.BA.TI.B.AL.NA.K.W.SI.ZR.CE.SM.Y.NB AND TA. AU DETECTION LIMIT BY ICP IS 3 PPM.
 - SAMPLE TYPE: SOILS -BOMESH AU# ANALYSIS BY AA FROM 10 GRAM SAMPLE.

DATE RECEIVED: OCT 18 1986 DATE REPORT MAILED: *Oct 23/86* ASSAYER: *D. J. ...* DEAN TOYE, CERTIFIED B.C. ASSAYER.

GEOCHEMICAL ICP ANALYSIS

.500 GRAM SAMPLE IS DIGESTED WITH 3ML 3-1-2 HCL-HNO3-H2O AT 95 DEG. C FOR ONE HOUR AND IS DILUTED TO 10 ML WITH WATER.
THIS LEACH IS PARTIAL FOR MN, FE, CA, P, CR, MG, BA, TI, B, AL, NA, K, W, SI, ZK, CE, SM, Y, NB AND TA. AU DETECTION LIMIT BY ICP IS 3 PPM.
- SAMPLE TYPE: ROCK/SOILS AU ANALYSIS BY AA FROM 10 GRAM SAMPLE.

DATE RECEIVED: NOV 10 1986 DATE REPORT MAILED: Nov 14/86 ASSAYER: *N. Lipp*... DEAN TOYE. CERTIFIED B.C. ASSAYER.
