GAP OPTION CLAIM & GRID LOCATION

INTRODUCTION:

The mineral claims 2276 (Gap) and 2277 (Gap 1) lie adjacent to one another and are located in the Revelstoke Mining Division, British Columbia. The property lies about 4 air kilometers north of Camborne, B.C. and about 35 km southeast of Revelstoke at latitude 50 , 49.5 N and longitude 117 , 39.5 W on mapsheet 82K/13E of the National Topographic System.

Road access to the property is very good as it is situated within an active logging area, with well-maintained haulage roads and branch roads throughout much of the property. The claims are accessible by road from the TransCanada Highway at Revelstoke and from B.C. Highway No. 23 from Revelstoke and Nakusp.

The claims are located in the rugged Selkirk Mountain system. Much of the property consists of heavily timbered and logged-over slopes with some rock bluffs and more open alpine areas at higher elevations. Most of the rock outcrop is covered by a heavy layer of moss, making prospecting and geological mapping a slow process.

The area has a high snowfall, but due to a southeastern exposure the claims are usually snowfree from early May until late October.

GEOLOGY:

The claims are underlain by metamorphic rocks of the early Paleozoic Lardeau group of phyllites and altered greenstone. It includes the Broadview formation which trends in a general northwest direction for 100 miles and is host rock to many prospects and former producing mines. Gold is the principal economic mineral found in quartz veins and altered rock.

LINECUTTING:

8.10 kilometers of linecutting were completed on the Gap claims, 1.05 km on the Gap and 7.05 km on the Gap I. The purpose of the line cutting was to establish a grid for the collection of soil samples.
