BRALORNE EXTENSION CLAIMS

INTRODUCTION

This report describes the results of a geochemical soil sampling survey that was done on the Bralorne Extension Claims during late October 1988.

PROPERTY, LOCATION, ACCESS

The Bralorne Extension Claim is situated 5 kms south of Goldbridge, B.C. in the former producing gold mining Bridge River camp.

Access is easily gained to the property from the Hurley River forest access road. This main haulage logging road connects Goldbridge to Pemberton and serves as a very useful short cut when driving from Pemberton to Goldbridge during the period April through November. The Hurley road is not generally used as a route to Pemberton during winter, since it goes over Railroad Pass which is in excess of 5000 feet and the pass closes during the winter. The northern section of the Hurley Road, i.e. the area immediately south of Goldbridge including the area of the Bralorne Extension Claim, is kept open during the winter because of active logging that occurs in this area and presence of a small lumber mill, which is situated on the Hurley River, approximately 25 kms south of Goldbridge.

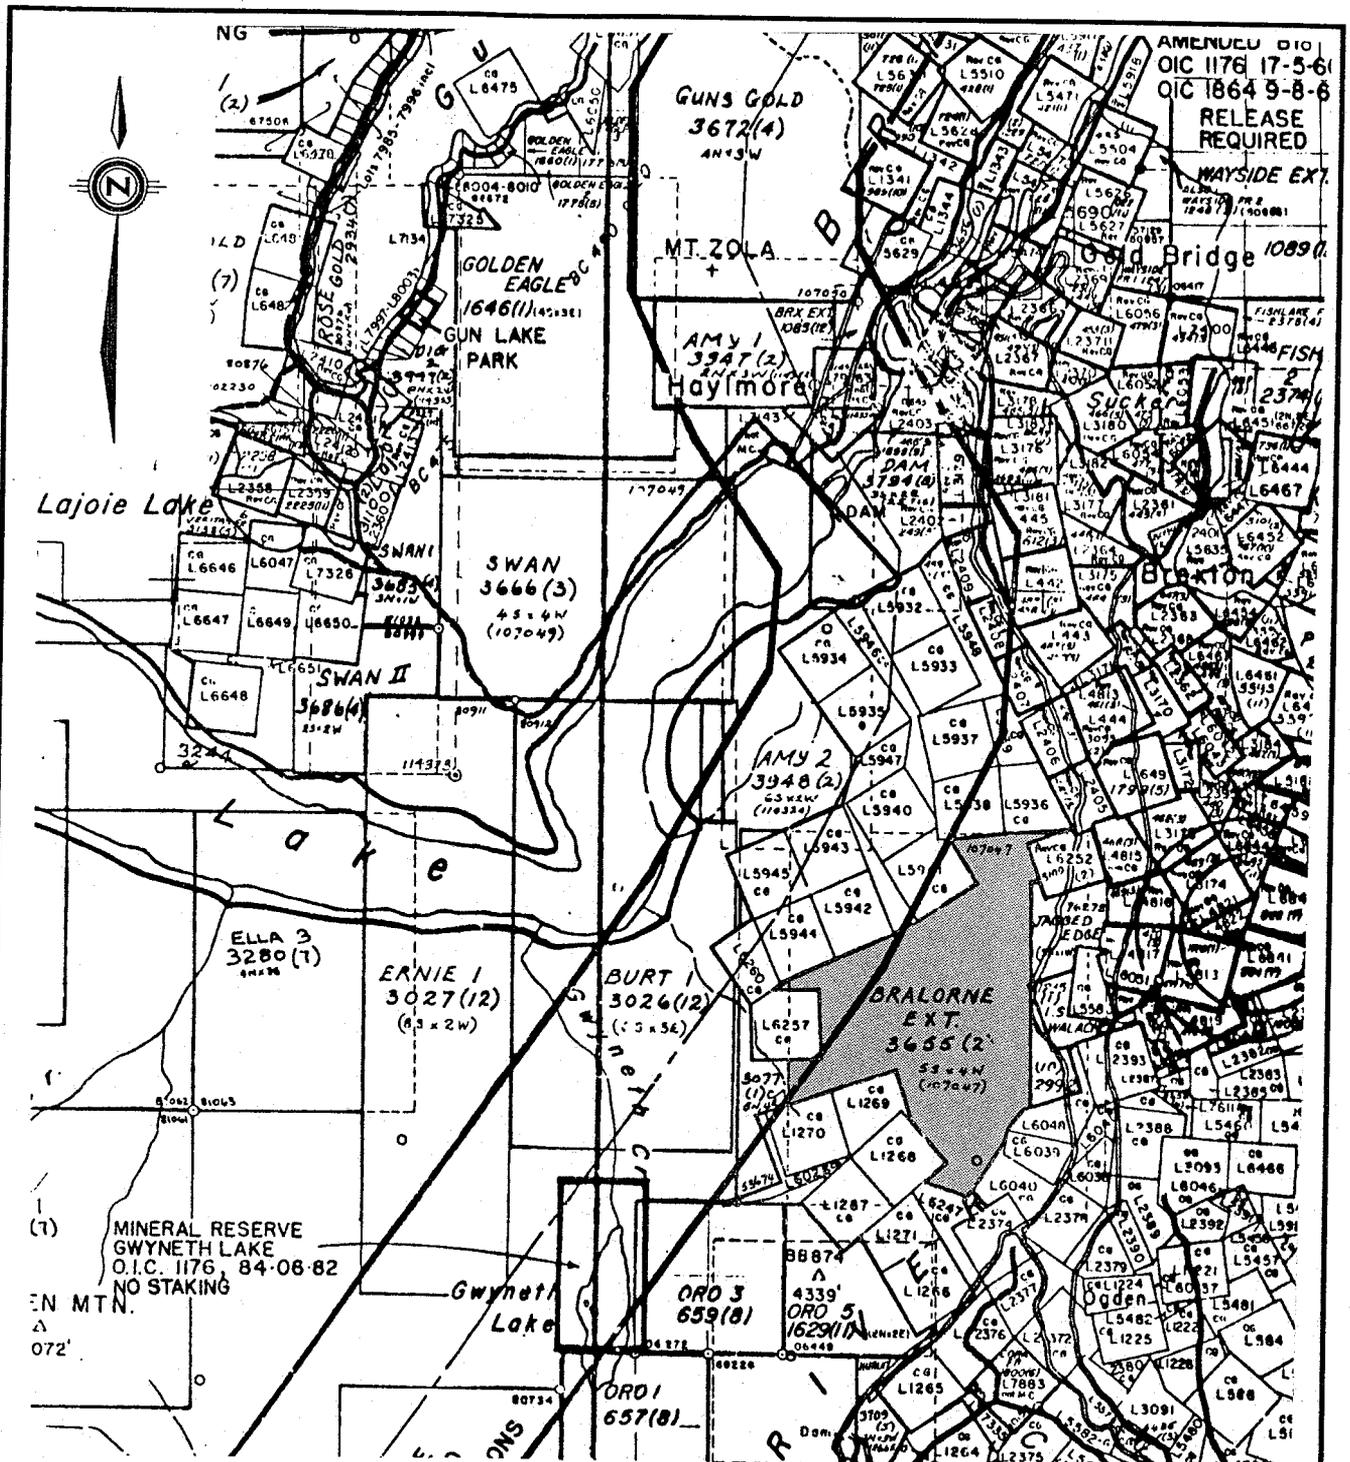

The topography of the Bralorne Extension Claim is gently rolling plateau country. The lowest elevation on the claim group is 3400 feet at the northern end. The ground rises gradually to the south to 4200 feet. There is a fairly extensive overburden cover on most of the claim group and mature stands of spruce and fir.

The property consists of 1 metric unit claim:

HISTORY

There is no history of exploration activity on the Bralorne Extension Claim group.

GEOLOGY

As mentioned previously the property is a plateau area and is covered by extensive overburden. It was therefore not mapped by Cairnes in the late 30s. The area was recently mapped as part of the coverage by Church, who indicates that the property is underlain by thin bedded ribbon cherts of the Fergusson series, although areas of Pioneer greenstones may occur on the southern part of the property.

GEOCHEMICAL SOIL SAMPLING

During late October 1988 a field crew from De La Mothe Exploration Services ran a 16 m. east-west baseline, and 21.9 kms of north-south crossline. Geochemical soil samples were then collected at 25 metre spacing along alternate crosslines, i.e. line 7, 9, 11, 13, 15, 17, and 19 west.

Soils are well developed on the Bralorne Extension claims and the samples were collected by using small shovels to dig down to the orange/brown B horizon, which is generally about 10 cms thick in most areas where it was sampled. In each case an approximate 100 gm. sample was placed in a standard brown Kraft geochemical sample bag, air-dried, and shipped to Min-En Laboratories in North Vancouver.

The 298 soil samples were analyzed by ICP methods for 6 elements (silver, arsenic, lead, zinc, copper and antimony). Values for each metal were then plotted on histograms assuming a log normal distribution, which is the usual distribution encountered in the Bridge River area, and anomalous values established. The values for the elements were then plotted on maps (silver, arsenic - Fig. 2; lead, zinc - Fig. 3; copper, antimony - Fig. 4).

Geochemical analytical procedures, together with results of the analyses and statistical interpretation of the results are contained in Appendix A.

The following anomalous values were established for each element:

Ag	1.1 ppm
As	35 ppm
Pb	29 ppm
Zn	295 ppm
Sb	5 ppm
Cu	50 ppm.

The overall strength of these values is low for the Bridge River area. The anomalous values are also correspondingly of weak strength for Bridge River geochemical soil samples. There are no anomalous geochemical values in the central or western part of the claim, but some weakly anomalous areas do exist on lines 7 and 9 west. In particular, some strong lead, zinc values with coincident silver, antimony and copper response are present on line 7W north.

COST STATEMENT FOR ASSESSMENT WORK CREDITSCONTRACT SERVICES:

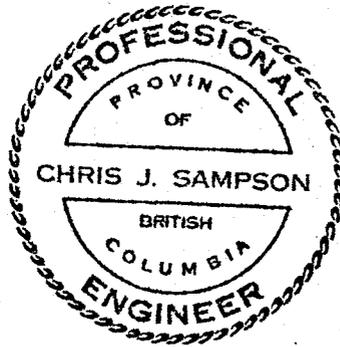

Grid Layout: 21.9 kms of line at \$160/km.	\$3,504.00
Soil Sampling: 11 days at \$160/day (De La Mothe Exploration Services, North Vancouver, B.C.)	1,706.00
Field Supervision: K. Embree 2 days @ \$200/day	400.00
Geochemical Analyses: (Min-En Labs, N. Vanc.)	1,791.00
Sampson Engineering: 2 days Consulting - Report preparation at \$300/day	600.00
Drafting: (RWR Drafting Services)	533.15
Typing and Printing	<u>100.00</u>
	<u>\$8,634.15</u>

Vancouver, B.C. V6K 2L6

CERTIFICATE

I, Christopher J. Sampson, of 2696 West 11th Avenue, Vancouver, B.C. V6K 2L6, hereby certify that:

1. I am a graduate (1966) of the Royal School of Mines, London University, England with a Bachelor of Science degree (Honours) in Economic Geology.
2. I have practised my profession of mining exploration for the past 22 years in Canada, Europe, United States and Central America. For the past 12 years I have been based in British Columbia.
3. I am a consulting geologist. I am a registered member in good standing of the Association of Professional Engineers of British Columbia.
4. I have not written any other reports on the Bralorne Extension claims nor on any other properties within 10 kms. of those claims.
5. The present report is based on knowledge gained from a visit to the property in October 1988, study of published and unpublished reports and supervision of the work programme.

Vancouver, B.C.

ANALYTICAL PROCEDURE REPORT FOR ASSESSMENT WORK - 26 ELEMENT ICP

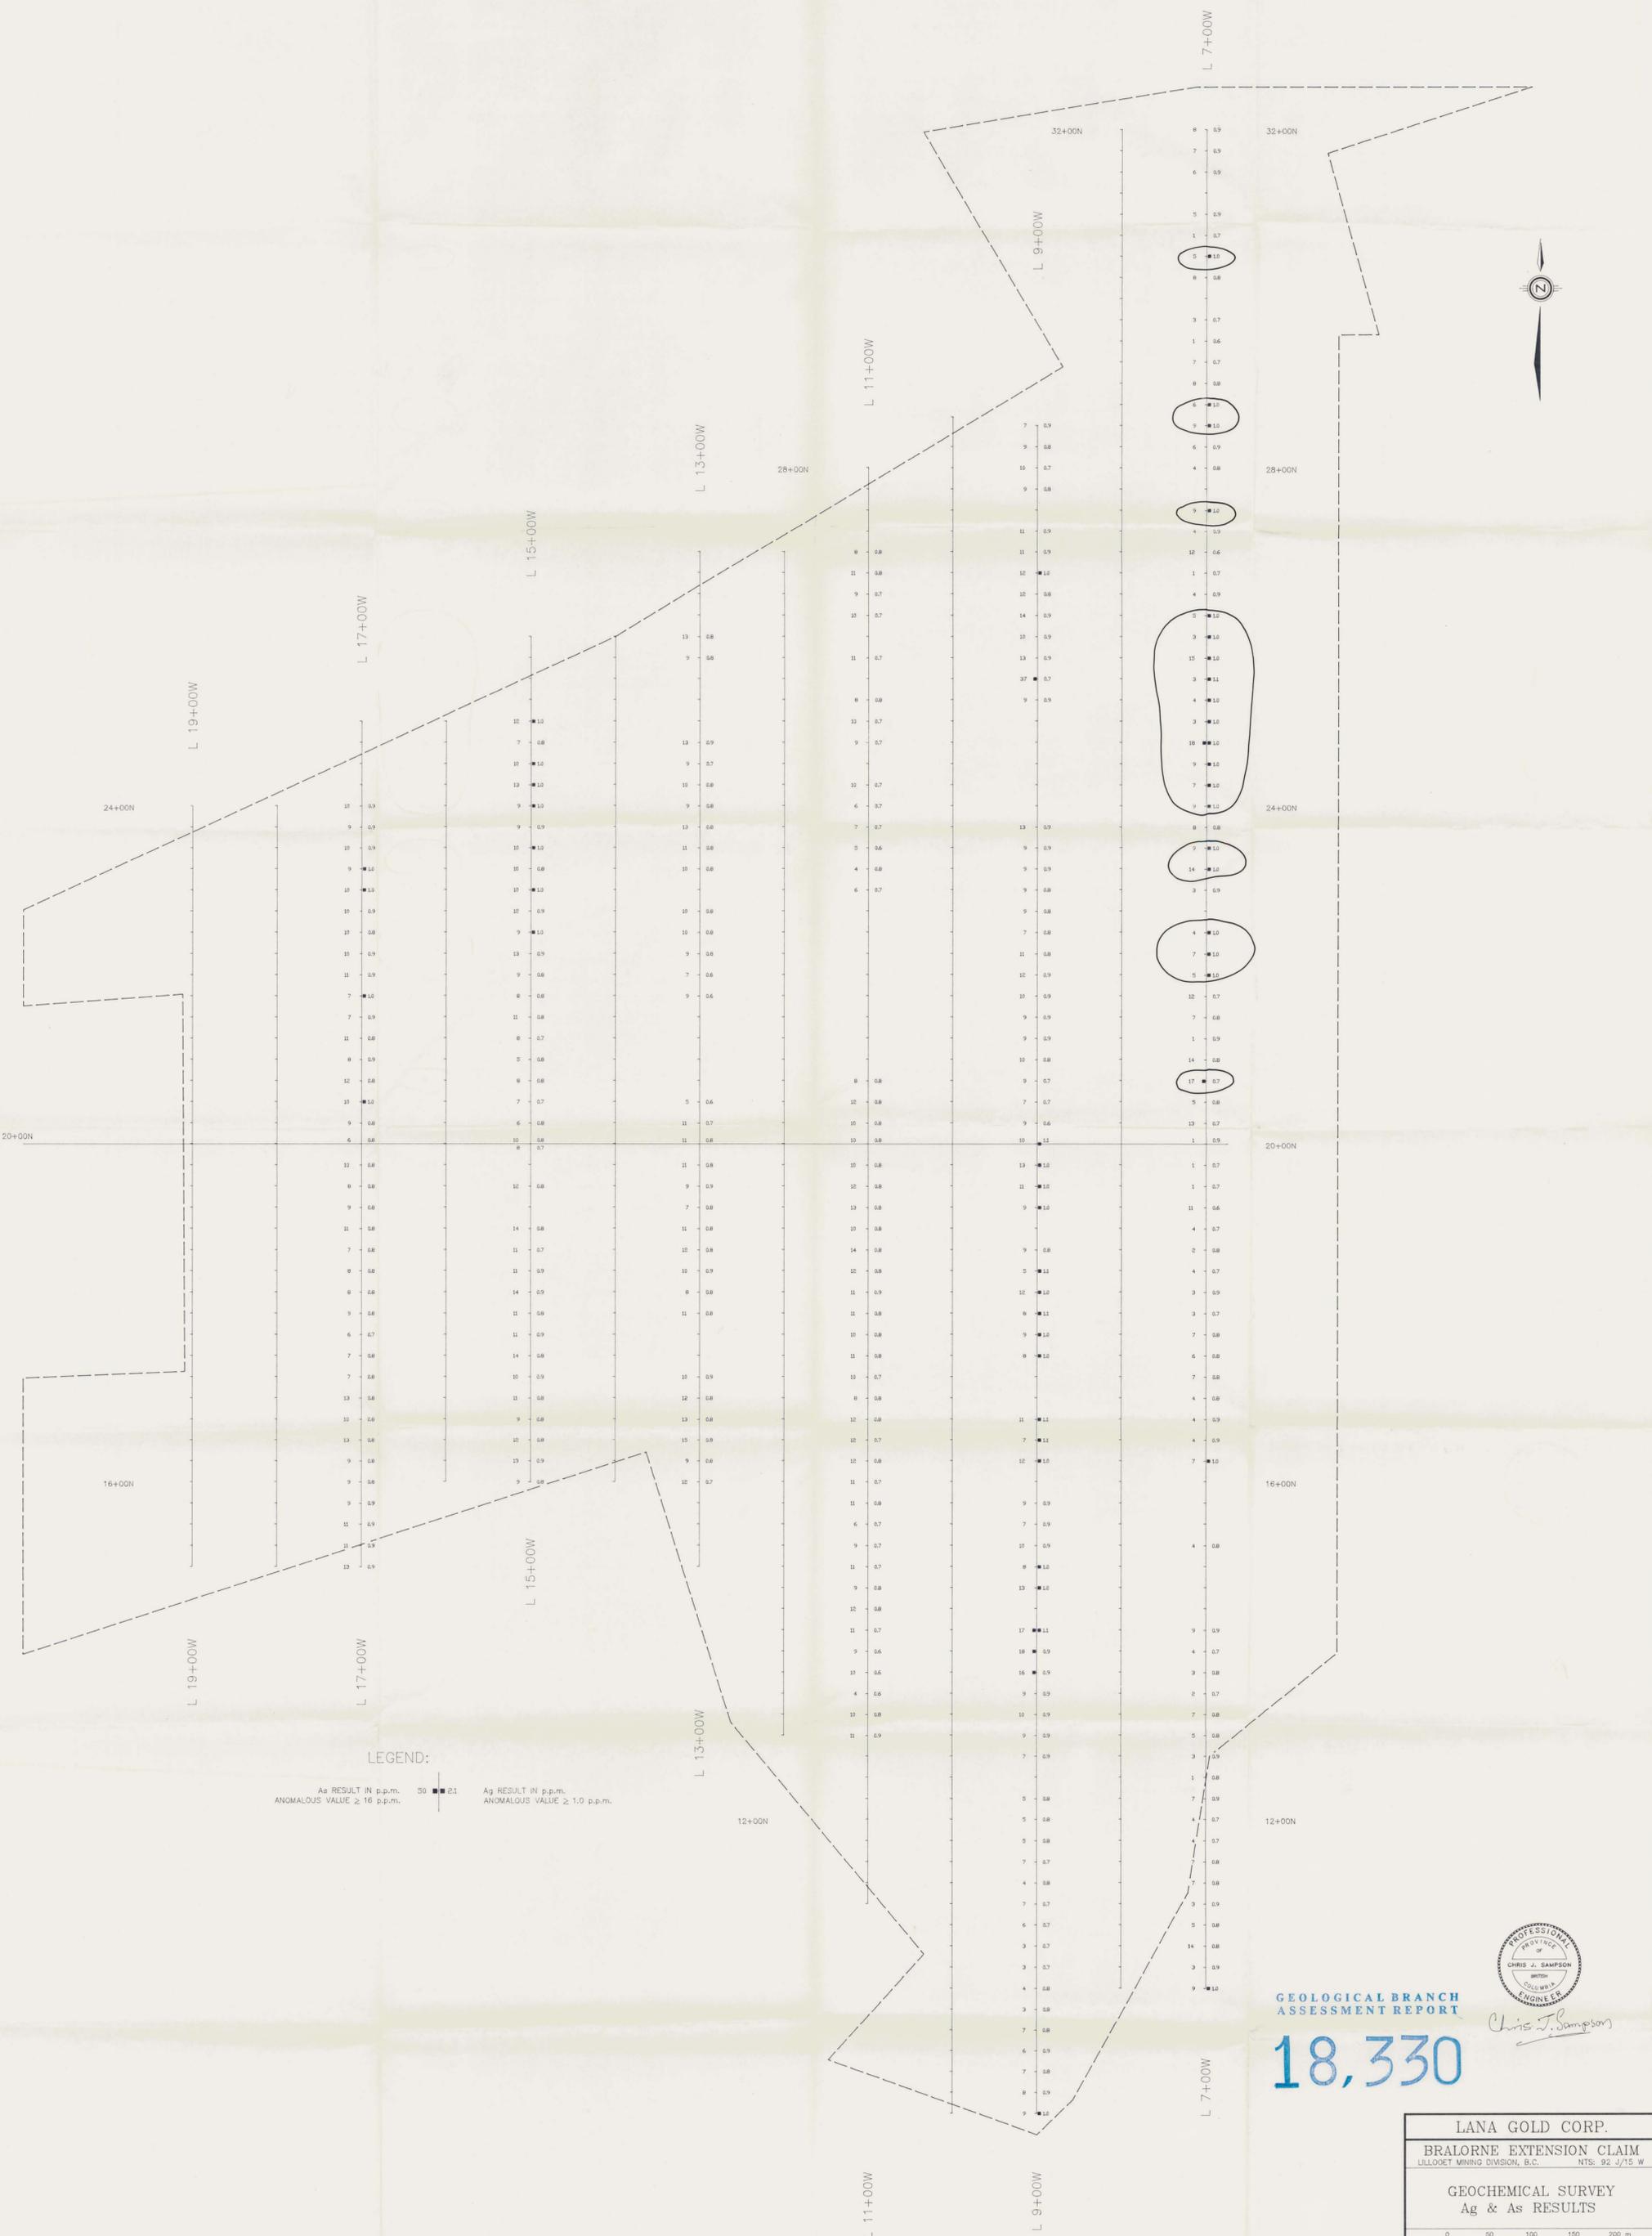

Ag, Al, As, B, Bi, Ca, Cd, Co, Cu, Fe, K, Mg, Mn, Mo,
Na, Ni, P, Pb, Sb, Sr, Th, U, V, Zn

Samples are processed by Min-En Laboratories Ltd., at 705 W. 15th St., North Vancouver Laboratory employing the following procedures.

After drying the samples at 95°C soil and stream sediment samples are screened by 80 mesh sieve to obtain the minus 80 mesh fraction for analysis. The rock samples are crushed by jaw crusher and pulverized by ceramic plated pulverizer.

1.0 gram of the samples are digested for 6 hours with HNO₃ and HClO₄ mixture.

After cooling samples are diluted to standard volume. The solutions are analysed by Computer operated Jarrell Ash 9000ICP. Inductively coupled Plasma Analyser. Reports are formatted by routing computer dotline print out.
