SUMMARY

A preliminary program of prospecting and sampling was conducted on the Tic 6-9 mineral claims during the summer of 1988 for Kestrel Resources Ltd.

A base camp was established at the headwaters of Forrest Kerr Creek and a helicopter was utilized to access the property. A total of 172 rock chip samples and 11 silt samples were collected.

The Tic 6-9 mineral claims are underlain by sediments, andesites, and coastal plutons to the southeast, central and northwest portions of the group, respectively. Assays of up to 2640 ppb gold and 15.9 ppm silver were returned from massive sulphide lenses within the limestone, and values of 940 ppb gold and 8.1 opt silver within the sedimentary unit.

INTRODUCTION

The Tic 6-9 mineral claims, a total of 64 units, were staked in February of 1983. The claims are situated 11 kilometres southeast of Newmont Lake in the Iskut River area of British Columbia (N.T.S. 104 B/15).

The claims cover favourable geology east of Gulf International Minerals' McLymont Claims, where high grade veins of quartz-pyrite-chalcopyrite are presently being explored.

A program of preliminary prospecting and sampling was conducted by Rangex Services during the summer of 1988 to evaluate the potential of the property.

LOCATION, ACCESS AND GEOGRAPHY

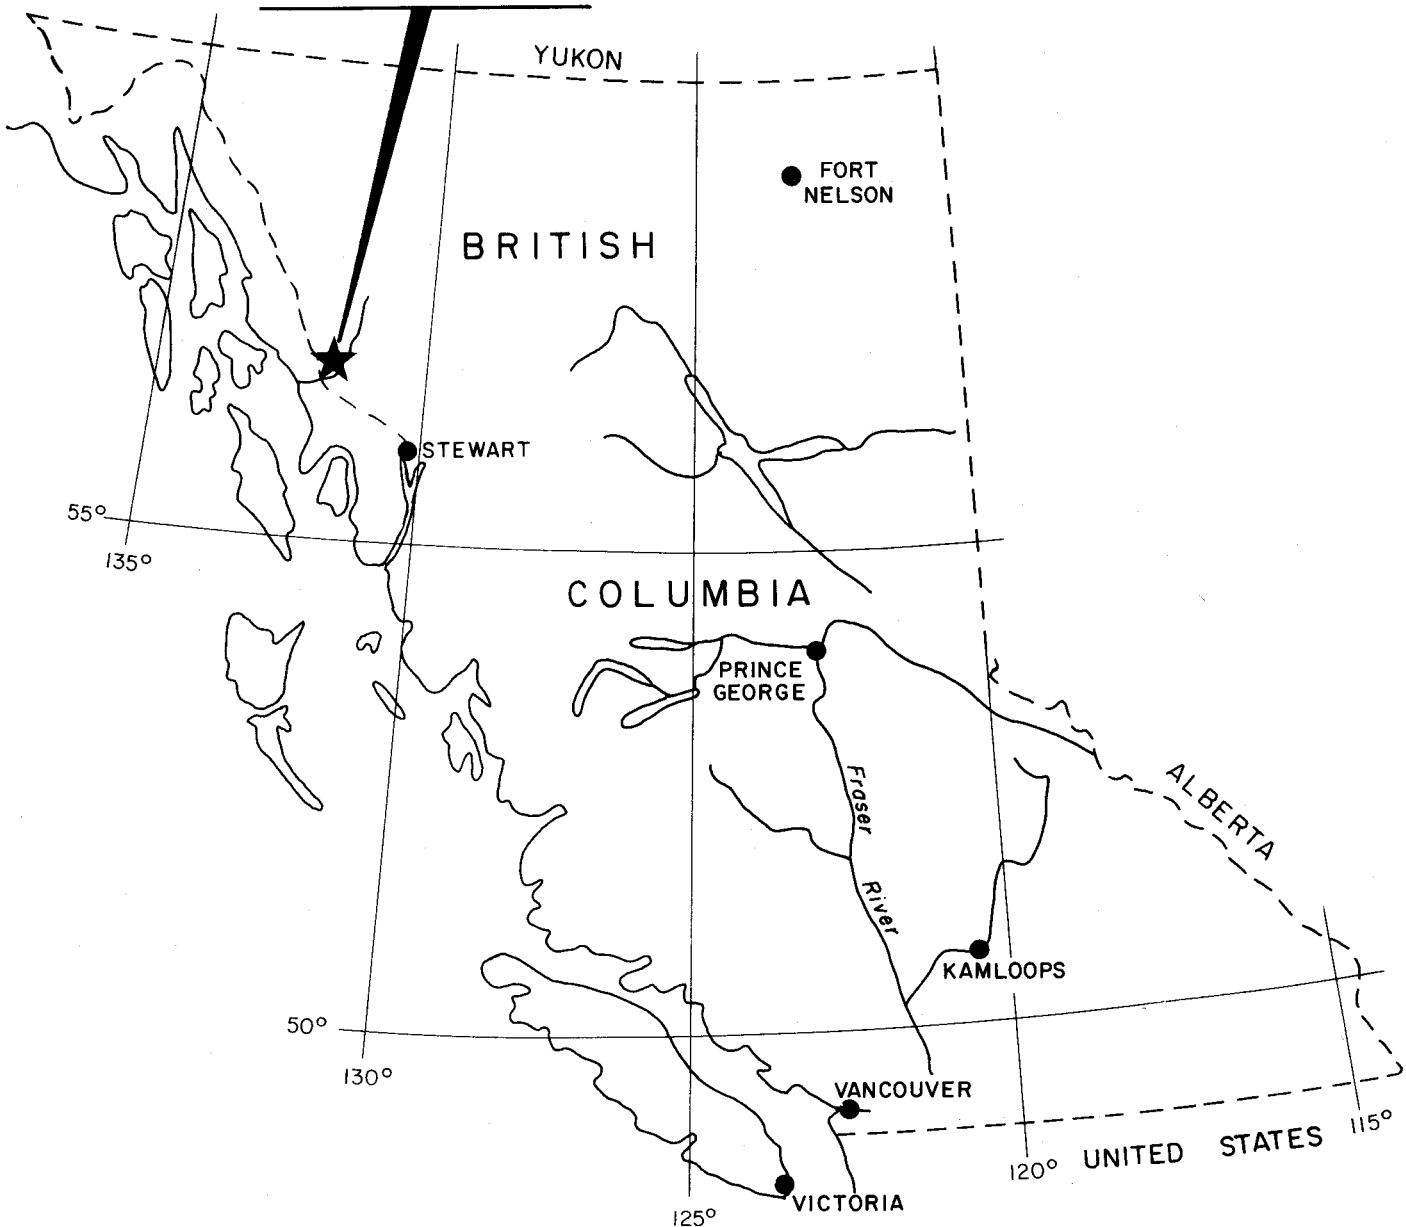

The claim group is situated approximately 120 km north of Stewart, B.C. centered at 56° 48' north latitude and 130° 46' west longitude in the Liard Mining Division of British Columbia.

Access to the claims is via helicopter from a base camp at the headwaters of Forrest Kerr Creek, 56° 56' north longitude, 130° 48' west longitude. Regular fixed wing flights from Smithers, B.C. service the Forrest Kerr camp.

Topographically, the Iskut area is extremely rugged, ranging in elevations from 100 metres to in excess of 2,000 metres. Spruce and alder represent the general vegetation while above treeline (900-1,000 m) alpine vegetation such as white and purple heather are present.

The Tic 6-9 claims are situated between the elevations of 900 metres and 1,800 metres. Glaciers partly covered the claim block on the northwest and southeast corners, 70% of the ground lying above treeline. A major east flowing drainage makes up the western portion of the claims.

Drawn By: Meridian Map

Scale 1:10,000,000

Date : February 1989

FIG.
I

The area receives heavy precipitation, snow in excess of 6 metres being common during the winter. The field season extends from June to mid-October.

CLAIM INFORMATION

Claim data is as follows:

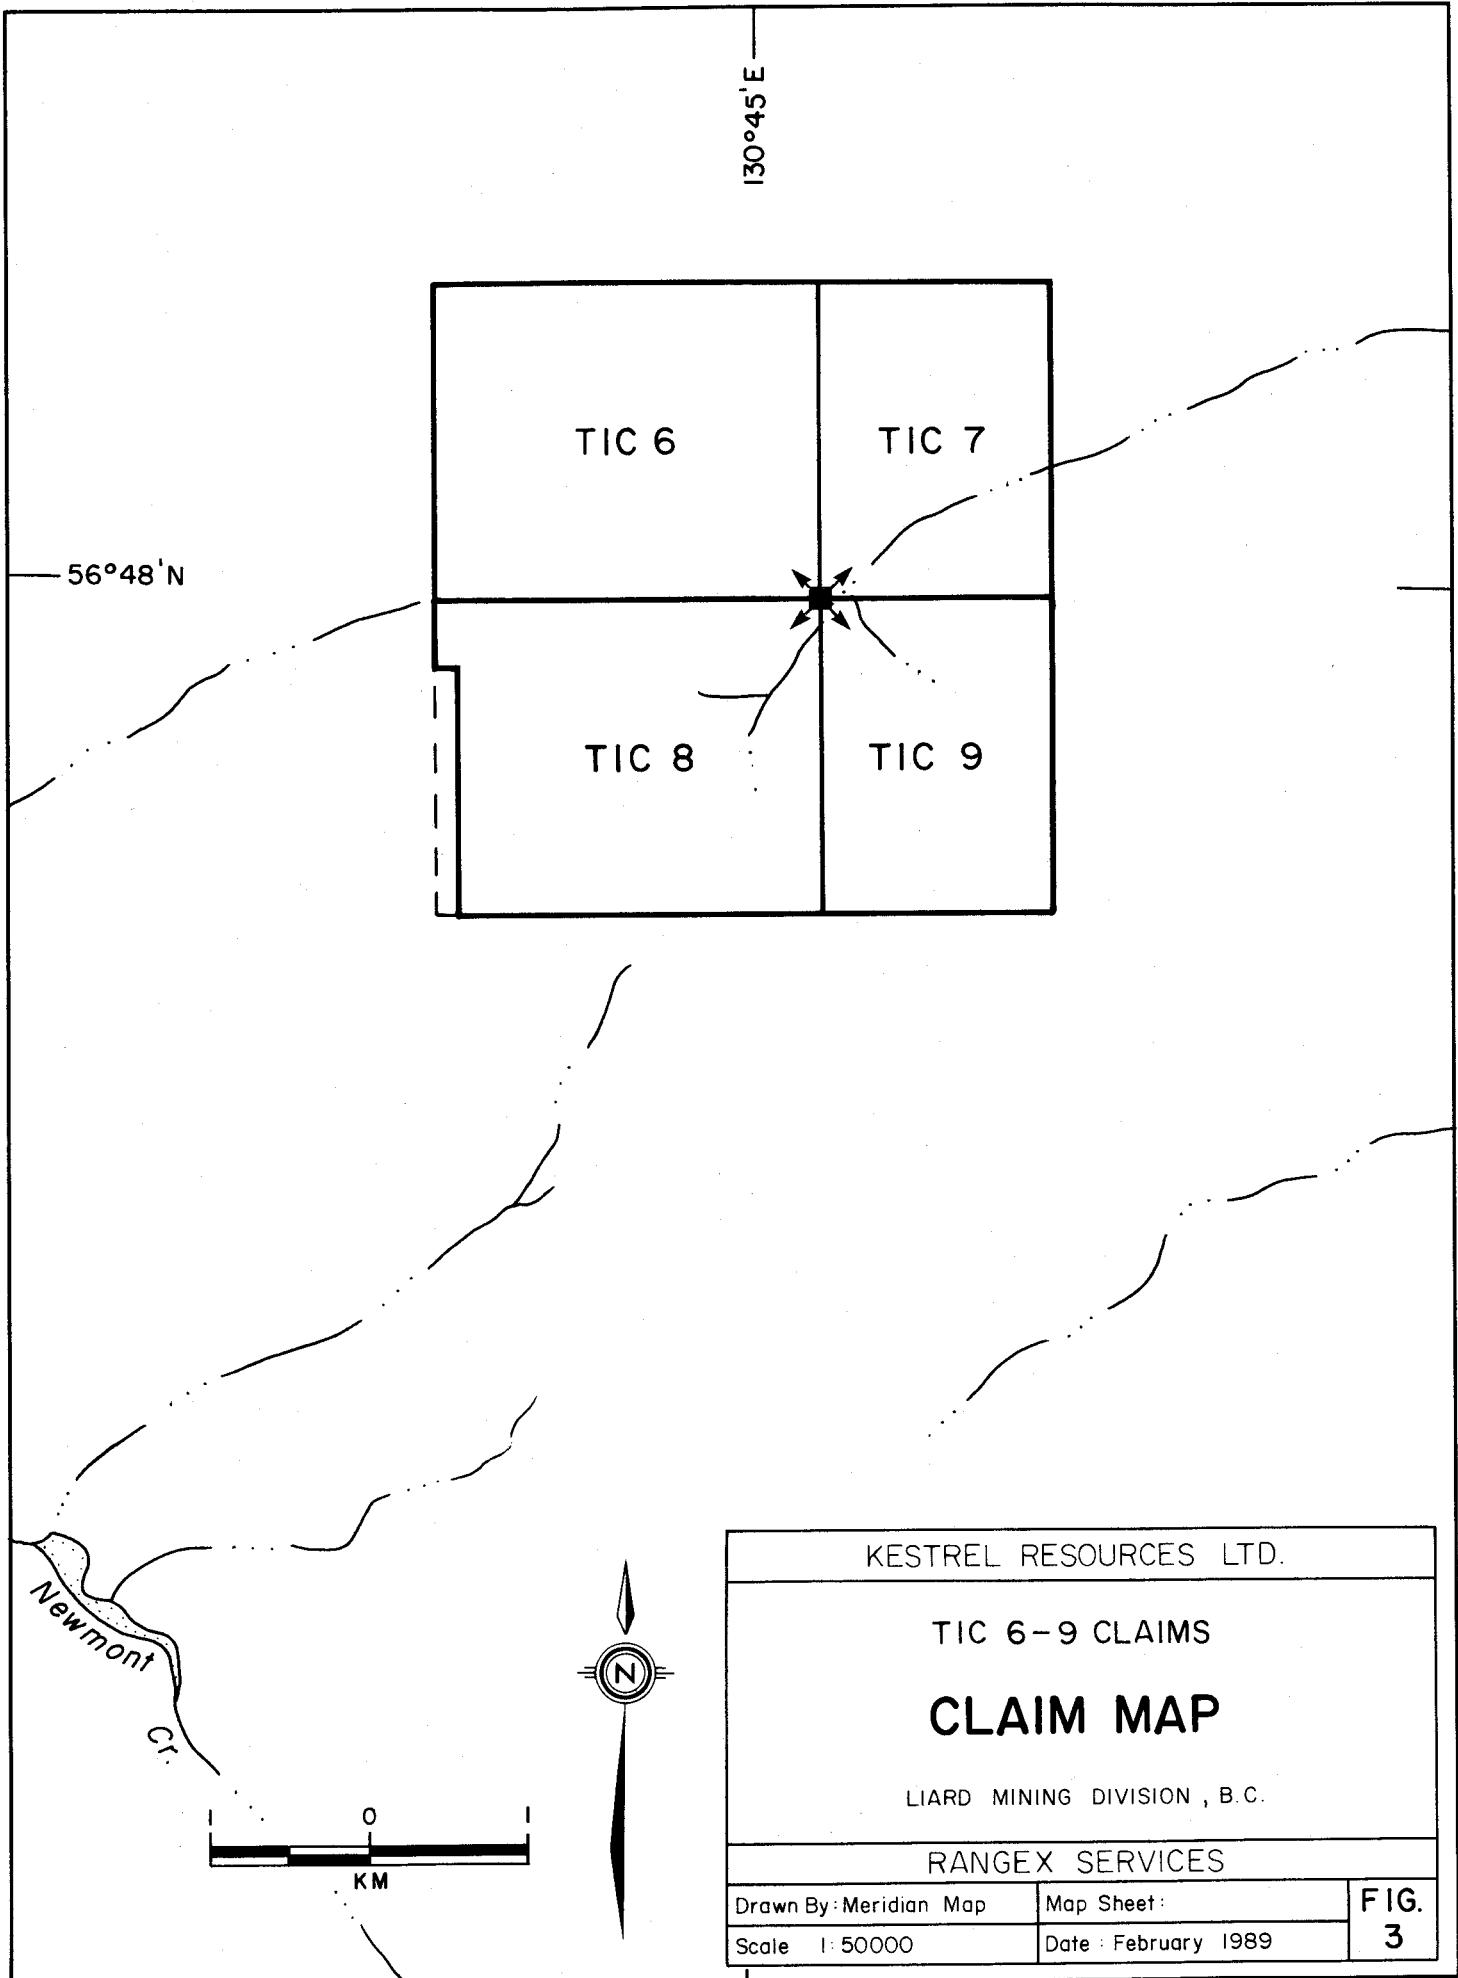

<u>Claim Name</u>	<u>Units</u>	<u>Record #</u>	<u>Record Date</u>
Tic 6	20	4505	February 24, 1988
Tic 7	12	4506	February 24, 1988
Tic 8	20	4507	February 24, 1988
Tic 9	12	4508	February 24, 1988

AREA HISTORY

There is no recorded work from the Iskut River region prior to 1907 when a staking party from Wrangell, Alaska, recorded nine mineral claims north of Johnny Mountain. Iskut Mining Company worked these crown granted claims undertaking trenching and drifting on veins yielding Galena, gold and silver. The 1917 Minister of Mines annual report states the Iskut Mining Company shipped a ton of ore which yielded, in 1917 currency, \$1.20 in gold, 44.2 ounces of silver and 12.45 percent copper.

Hudson Bay Mining & Smelting Ltd. located high grade gold, silver and lead in float during 1954. This was known as the Pick Axe showing and forms part of Skyline Explorations Stonehouse Gold deposit on Johnny Mountain.

Throughout the 1960's several major mining companies undertook exploration programs in the Johnny Mountain and Sulphurets Creek region. This work resulted in the discovery of several porphyry copper-molybdenum targets. Cominco completed several core holes on Johnny Mountain in 1965.

Skyline staked and the Inel property in 1969 following the discovery of massive sulphide in float on the Bronson Glacier and later in 1980 restaked the Reg property. During the period of 1981 to present Skyline has developed both these properties discovering high grade veins and polymetallic massive sulphide mineralization on the Inel and Reg properties.

As of January, 1988, GROVE, E.W., reported reserves from the Stonehouse Gold Deposit of 851,170 tons grading 25.0 Au g/tonne 29.1 Ag g/tonne and 0.76% Cu.

Delaware Resources Ltd. completed 10,000 metres of diamond drilling on their Cominco Snip claims located directly north of the Stonehouse Gold Deposit. This exploration resulted in estimated reserves of 997,810 tonnes grading 24.0 Au g/tonne. During the 1988 season an underground program was initiated on this deposit.

Newmont Mining Corporation of Canada Ltd. staked 324 claims (Dirk Claim Group) west of Newmont Lake in 1962. An exploration program of geological mapping, airborne and ground magnetics survey, sampling and diamond drilling was conducted to explore the skarn type mineralization discovered on the Dirk and Ken showings. Intersections of 0.23% Cu and 3.4 Ag g/tonne over 15.85 metres were reported from the Ken showing while Hole 4 on the Dirk showing returned assays of 0.30% Cu over 1.83 metres.

Gulf International Minerals staked the McLymont claims south of Newmont Lake in 1986. These claims had been staked by Dupont Canada Explorations Ltd. in 1980 as the Warrior claims and optioned to Skyline Explorations Ltd. and Placer Development Ltd. Exploration has extended the existence of quartz - pyrite - chalcopyrite veins which retain values of up to 102.8 Au g/tonne. Gulf International Minerals has conducted extensive diamond drilling on the McLymont claims reporting in their 1987 Annual Report, drilling results of up to 55.0 Au g/tonne, 1,362.1 Ag g/tonne and 0.97% Cu over 11.12 metres.

A number of exploration companies examined claims in the Arctic Lake area approximately 75 kilometres north of the Skyline Cominco deposits.

Kennco Exploration conducted a program of geological mapping on the Bam Claim group in 1965. Mitsui Mining and Smelting Co. Ltd. undertook geological mapping and silt sampling in the Arctic and Big A Groups during 1968.

REGIONAL GEOLOGY

The Iskut area lies within a complex geological setting of the Circum-Pacific orogenic belt of North America. Specifically it forms a part of the geological setting defined by Grove as the Stewart Complex. Grove E.W. (1986) states the following:

"The Stewart Complex lies along the contact between the Coast Plutonic Complex on the west, the Bowser Basin on the east, Alice Arm on the south and the Iskut River on the north."

Government workers have attempted, since 1948, to clarify relationships and assign ages to the various lithological units of the area, and to trace structural events affecting these units. This work has not been entirely successful, however, due to the extremely inaccessible terrain and difficult physical conditions confronting workers.

Mineral exploration studies carried out by private companies have added significantly to the geological knowledge of the area, but are not generally available publicly. Work completed by Kerr, 1948, G.S.C. Memoir 246; G.S.C maps 9-1957 and 1418-1979 - "Iskut River", form the basis of government mapping. Private companies active in the area since the early 60's include Newmont, Kennco, Cominco, Skyline and others too numerous to list.

The oldest known rocks of the area are limestone, dolomite and low grade metamorphosed sediments (quartzite, slates, phyllite) of lower Cambrian age that have been correlated with the Cache Creek Group prevalent in the southern half of the province. The limestone unit contains fossil crinoids and is unconformably overlain by upper Triassic Hazelton Volcanics and sediments. Bivalve fossils found west of Newmont Lake date these rocks as late Triassic and correlation of these rocks with both Stuhini volcanics and Unuk River formation has been attempted by various workers.

PERMIAN AND/OR EARLIER

PRE MIDDLE PERMIAN

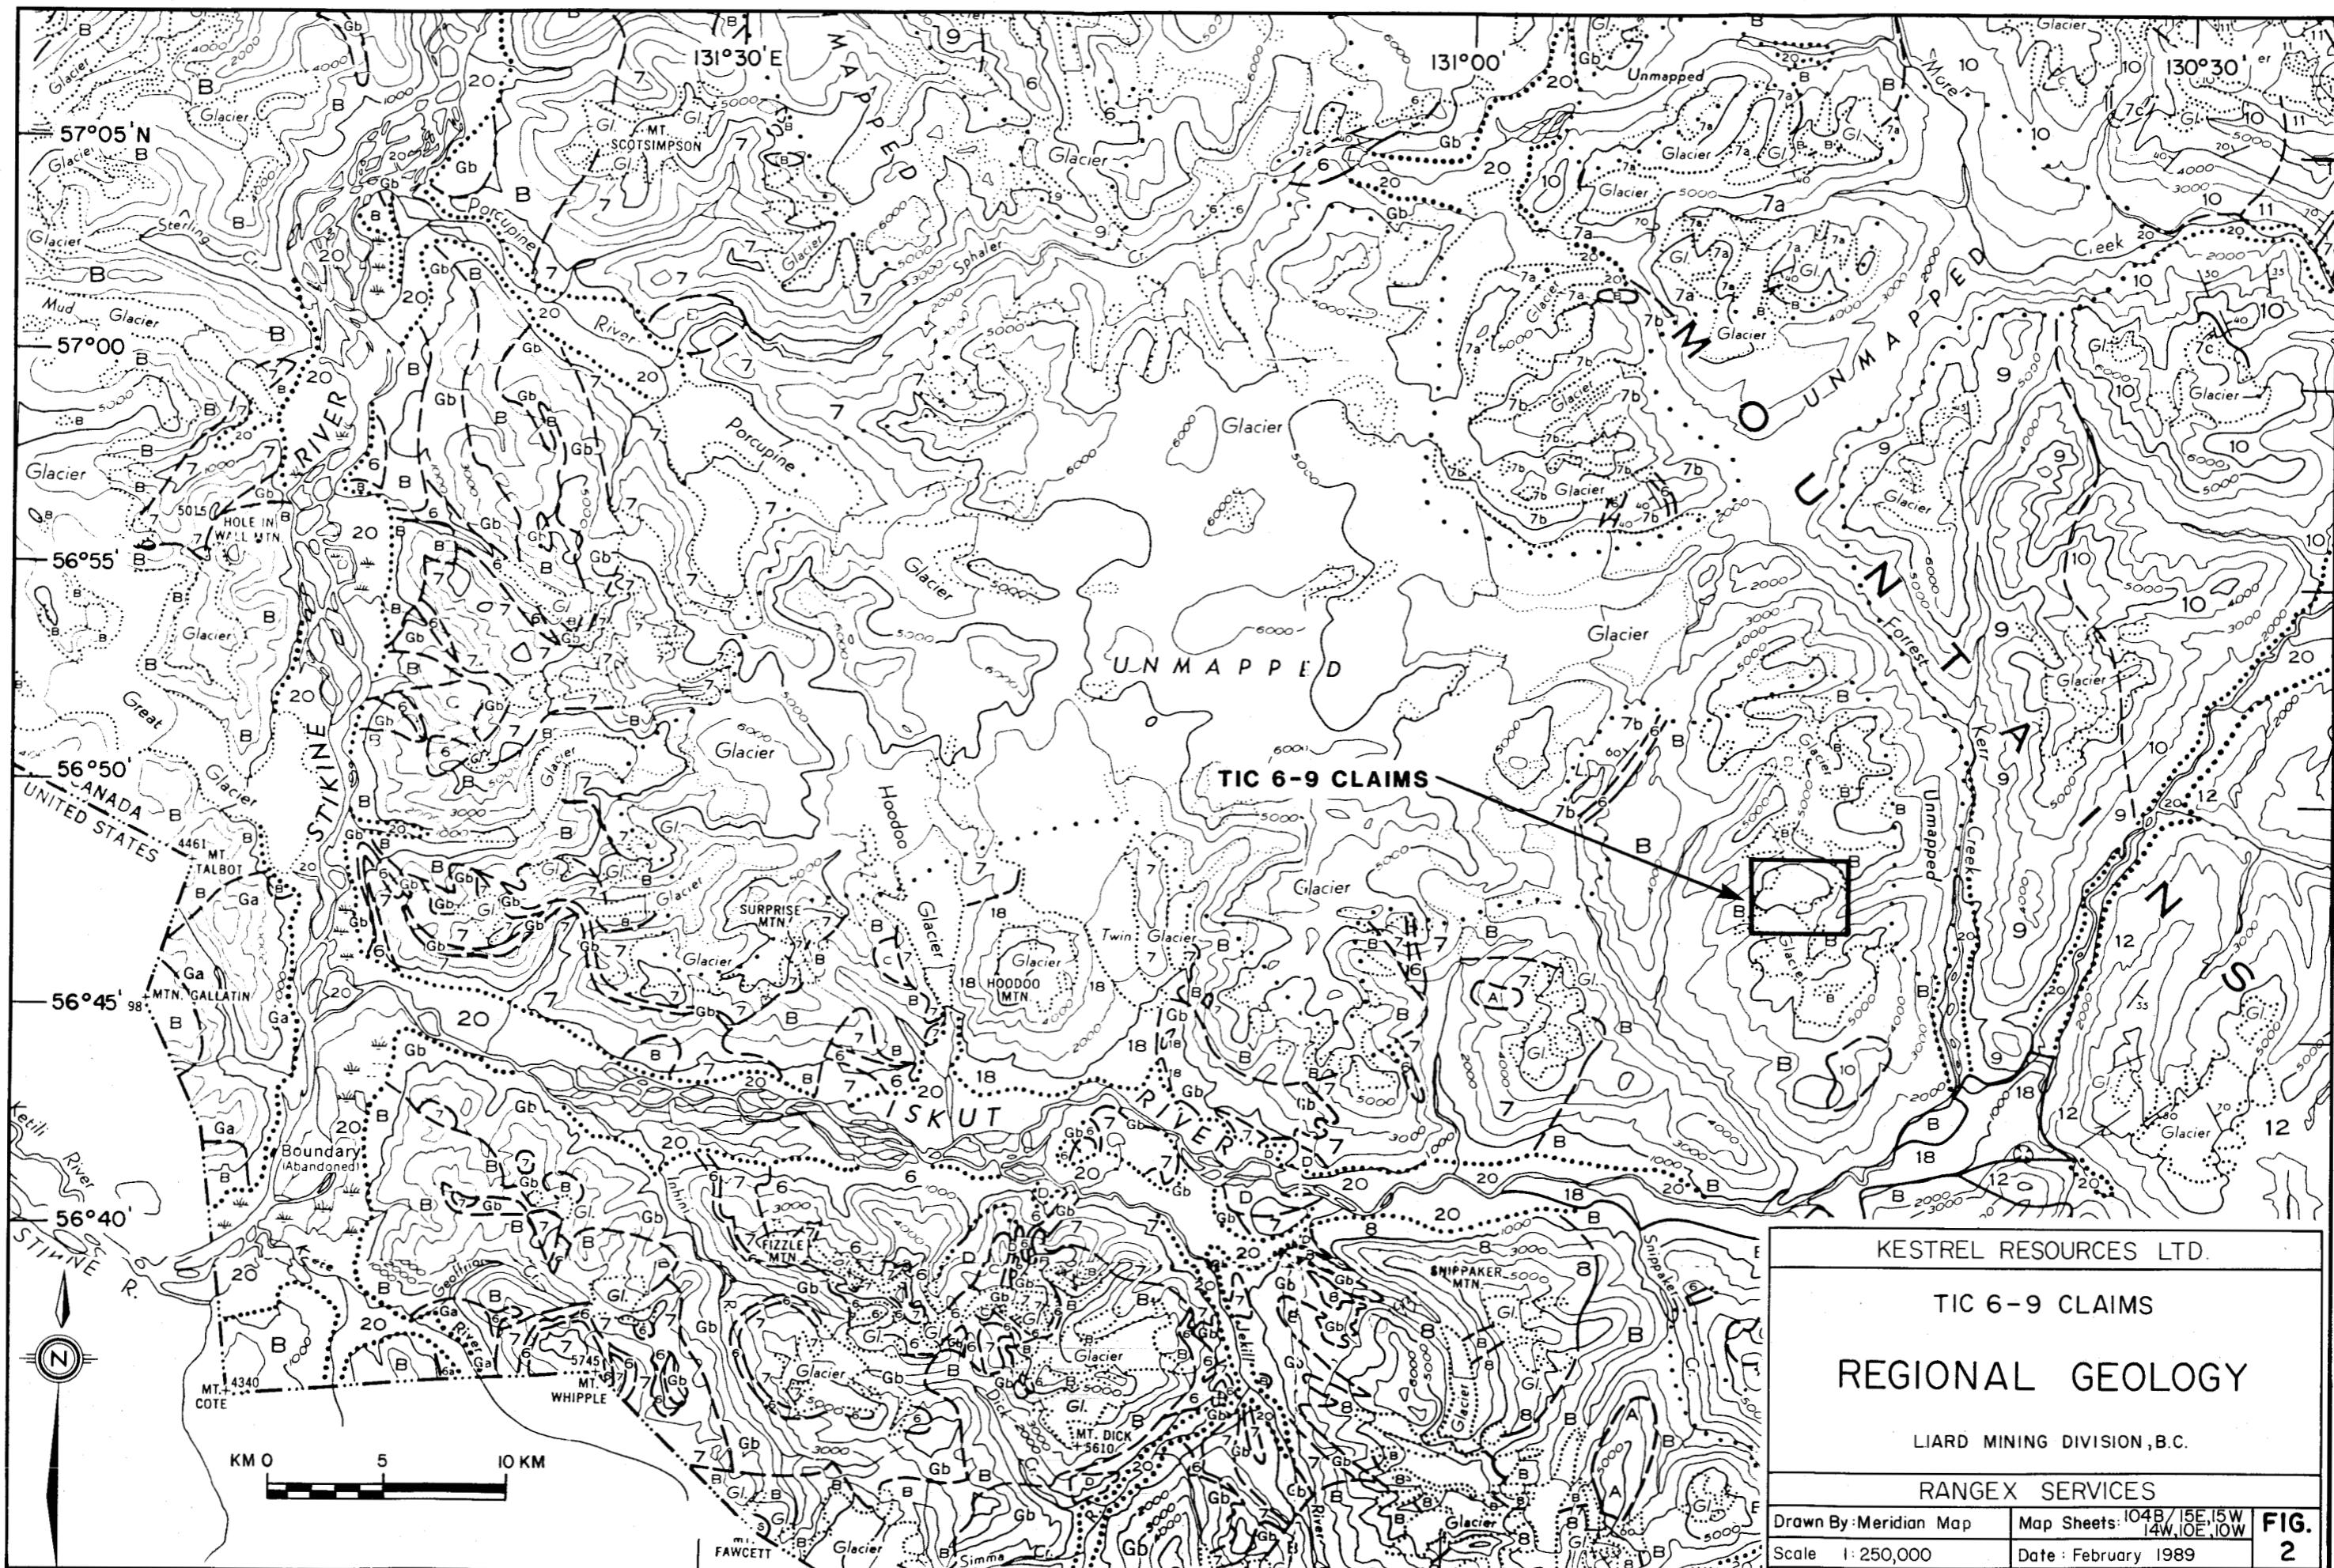

- G** Ga, Gneiss; Gb, phyllite, quartzite, minor crystalline limestone, highly altered and sheared greywacke and volcanic rock

MAINLY CARBONIFEROUS AND PERMIAN

- H** Biotite-quartz-feldspar gneiss, biotite-muscovite schist, crystalline limestone, greenstone, quartzite, phyllite

MISSISSIPPIAN AND EARLIER

- J** Gneiss, schist, crystalline limestone, crystalline dolomite, quartzite

Overlying the Triassic Hazelton volcanic-sedimentary assemblage is a similar group of volcanic-sedimentary rocks of middle Jurassic age named the Betty Creek Formation.

Cretaceous to Tertiary Coast Plutonic intrusions of granite, granodiorite, and diorite occupy large plutons of the map area. In addition smaller bodies of monzonite or syenite as well as subvolcanic acidic porphyries are sparsely distributed.

Tufa, hot spring deposits and pyroclastic material of Pleistocene and Recent age occur at several localities within the area, notably at Hoodoo Mountain.

Schistose rocks, although present in the area are not of great lateral extent and owe their origin to deformation metamorphism, rather than high temperature regional metamorphism.

Structurally, the map area is bisected by a prominent thrust fault along the Iskut River from Forrest Kerr Creek to the Stikine River Junction. The thrust separates unconformably, Mississippian-Pennsylvanian rocks from middle Jurassic strata and is thought to override rock formations to the south. Regionally, a dominant northeast trending and a subdominant northwest trending fault system complicate the local geology, especially where folding of the strata, which is common, has occurred.

PROPERTY EXPLORATION

A crew of seven people prospected and sampled the Tic 6-9 mineral claims throughout the summer of 1988. Work was undertaken from Forrest Kerr Camp.

A total of 172 rock samples and 11 silt samples were collected from the property. The samples were shipped to Van Geochem Lab Ltd. for analysis for gold (ppb) and silver (ppm) using fire assay and atomic absorption techniques.

One hundred and twenty-five of these samples were re-assayed for copper, lead, and zinc and a further 98 of the samples were assayed using ICP geochemical analysis.

Sample locations and results of analytical data are plotted on Figures 4 and 5. Assay results are presented in Appendix IV.

PROSPECTOR'S REPORT

The Tic 6-9 claim group is made up of sediments to the east and south, andesites through the center of the claim block, and coastal plutons to the north and west. A limestone unit is present on the southeast corner of Tic 8 extending into Tic 9. The sedimentary unit consists of schists, shales and siltstones that are cut with northeast-southwest trending shears and fractures. Mineralization is composed of pyrite, chalcopyrite, arsenopyrite and zones of chloritic alteration and quartz. The andesite unit carries pyrite, chlorite, calcite and quartz mineralization. The limestone unit contains massive sulphide lenses composed of magnetite, pyrite, arsenopyrite and chalcopyrite that are up to 3 metres wide and 40 metres long. A coating of limonite is present as surface oxidation whenever sulphides are present.

Anomalous values noted in the limestone unit consist of:

<u>Sample #</u>	<u>Au(ppb)</u>	<u>Ag(ppm)</u>	<u>Description</u>
32332	2640	15.9	Massive pyrite zone 1 metre x 30 metres between limestone and chlorite intrusive
32703	1360	-	6 metres x 30 metre massive pyrite magnetite lense on limestone andesite contact

Anomalous values of note in the sedimentary unit were:

<u>Sample #</u>	<u>Au(ppb)</u>	<u>Ag(ppm)</u>	<u>Description</u>
32508	940	-	Malachite stained, gossanous sediment
32912	-	.50	Pyrite and chalcopyrite in quartz in fine grained alteration
32918	800	0	Pyrite in frothy quartz stringer

RECOMMENDATIONS

A three part exploration program is proposed for the Tic 6-9 mineral claims.

1. Continued prospecting and sampling.
2. Channel sampling program with location control.
3. Detailed 1:5000 scale geological mapping.

A budget will be submitted when required.

ICAP GEOCHEMICAL ANALYSIS

A .5 GRAM SAMPLE IS DIGESTED WITH 5 ML OF 3:1:3 HCl TO MnO₂ IN H₂O AT 95 DEG. C FOR 90 MINUTES AND IS DILUTED TO 10 ML WITH WATER.
 THIS LEACH IS PARTIAL FOR Sn, Ni, Fe, Ca, P, Cr, Mg, Ba, Pb, Al, Na, K, N, Pt AND Sr. Au AND PD DETECTION IS 3 PPM.
 IS= INSUFFICIENT SAMPLE, ND= NOT DETECTED, --= NOT ANALYZED

ICAP GEOCHEMICAL ANALYSIS

A .5 GRAM SAMPLE IS DIGESTED WITH 5 ML OF 3:1:3 HCl TO HNO₃ TO H₂O AT 95 DEG. C FOR 90 MINUTES AND IS DILUTED TO 20 ML WITH WATER.
 THIS LEACH IS PARTIAL FOR Si,Al,Fe,Ca,P,Cr,Mg,Ba,Pb,Al,Mn,X,M,PT AND SR. Au AND PD DETECTION IS 3 PPM.
 IS= INSUFFICIENT SAMPLE, ND= NOT DETECTED, - = NOT ANALYZED

COMPANY: RANGEX SERVICES
 ATTENTION: K. KAYE
 PROJECT: KESTREL

APPENDIX V

SAMPLE DESCRIPTIONS

SAMPLE DESCRIPTIONS - TIC 6

<u>Sample No.</u>	<u>Sample Type</u>	<u>Sample Width</u>	<u>Description</u>
32354	Rock Chip	1 m	Chalcopyrite in chlorite/carbonate altered monzonite
32355	"	1 m	Chalcopyrite in quartz veins in monzonite
32425	"	1 m	Pyrite in chloritic intrusion in monzonite
32460	"	1 m	Pyrite in andesite dyke
32928	"	1 m	Pyrite in chlorite alteration

SAMPLE DESCRIPTIONS - TIC 7

<u>Sample No.</u>	<u>Sample Type</u>	<u>Sample Width</u>	<u>Description</u>
32260	Rock/Chip	50 cm	Quartz veins in chloritic schist
32261	"	50 cm	Lusty quartz veins in sericite schist
32262	"	1 m	Rusty quartz veins in black schist
32263	"	50 cm	Quartz vein in schist
32274	"	1 m	Lusty quartz in argillite
32380	"	1 m	Quartz, chlorite in granite with pyrite and epidote
32381	"	1 m	Trace pyrite and epidote in altered feldspar porphyry
32382	"	1 m	Chalcopyrite, calcite, quartz in andesite
32383	"	1.5 m	Disseminated pyrite in siliceous, chloritic schist
32384	"	1.5 m	Pyrite in siliceous chlorite in gossanous zone
32421	"	50 cm	Pyrite in quartz veinlets in banded argillite
32422	"	50 cm	Chalcopyrite in quartz/calcite vein
32423	"	50 cm	Same as 42422
32424	"	50 cm	Chalcopyrite in quartz / calcite
32502	"	1 m	Quartz vein in andesite/monzonite porphyry
32503	"	1.5 m	Large zone of quartz / pyrite / feldspar
32504	"	1 m	Quartz with pyrite cross-cutting andesite dykes
32505	"	50 cm	Pyrite in andesite in fault
32506	"	1 m	Large gossanous zone
32507	"	2 m	Andesite dykes with pyrite and quartz in monzonite

SAMPLE DESCRIPTION - TIC 7 CONTINUED

<u>Sample No.</u>	<u>Sample Type</u>	<u>Sample Width</u>	<u>Description</u>
32710	Rock/Chip	1 m	Trace pyrite in rhyolite
32731	"	50 cm	Quartz in siliceous schistose matrix
32732	"	1 m	Pyrite in altered rock
32733	"	50 cm	Quartz alteration with quartz stringers in shear
32734	"	50 cm	Quartz vein in chloritic schist
32735	"	1 m	Quartz in sericite schist
32736	"	1 m	Altered argillite/schist with some quartz stringers
32737	"	50 cm	Trace chalcopyrite in quartz/calcite fracture filling
32738	"	50 cm	Massive pyrite along fractures in altered siliceous calcite / chlorite

TIC 8 SAMPLES DESCRIPTIONS

<u>Sample No.</u>	<u>Sample Type</u>	<u>Sample Width</u>	<u>Description</u>
32242	Rock Chip	1 m	Trace py in chlorite/calcite altd andesite
32243	Rock Chip	50 cm	Mass py in fracture in dolomite
32244	Rock Chip	50 cm	Mass py in chlorite/calcite fracture filling
32245	Rock Chip	50 cm	Mass py, magnetite
32246	Rock Chip	50 cm	Mass py in fractures in altered calcitic/chloritic dolomite
32247	Rock Chip	1.5 m	Py in siliceous qtz/chlorite block in pyritic limestone
32248	Rock Chip	1 m	Py in limestone
32249	Rock Chip	50 cm	Py in qtz/calcite vein in altered andesite
32250	Rock Chip	1 m	Mass py in chlorite altered andesite
32317	Float		Float rock with py, chalcopyrite, epidote
32318	Rock Chip	50 cm	Calcite vein
32319	Float		Mass py, magnetite in float
32320	Rock Chip	1 m	Chalcopyrite in chloritic qtz, porphy.
32321	Rock Chip	1 m	Malachite, azurite, chalcocite, pyrite in chloritic qtz porphy.
32322	Rock Chip	1 m	Chalcopyrite, py, malachite in qtz porphy
32323	Float		Magnetite, py in float boulders
32324	Float		Chalcopyrite, magnetite in float boulders
32325	Rock Chip	50 cm	Chalcopyrite, malachite in qtz vein in foliated chloritic argillite
32326	Rock Chip	1 m	Pyrite in chloritic argillite
32327	Rock Chip	1 m	Chalcopyrite in calcite/chlorite breccia
32328	Rock Chip	1 m	Pods of pyrite in chlorite alteration
32329	Rock Chip	50 cm	Dissem. pyrite in carbonate vein
32330	Rock Chip	1 m	Pyrite in chloritic argillite
32331	Rock Chip	1 m	Pyrite in limestone
32332	Rock Chip	2 m	Mass py 1 m x 30 m between limestone and chlorite intrusive
32333	Rock Chip	1 m	Same as 32332

<u>Sample No.</u>	<u>Sample Type</u>	<u>Sample Width</u>	<u>Description</u>
32334	Rock Chip	1 m	Same as 32332
32335	Rock Chip	50 cm	Mass py
32336	Rock Chip	1 m	Mass magnetite
32337	Rock Chip	1 m	Mass py/magnetite in limestone/chlorite contact
32338	Rock Chip	1 m	Same as 32337
32340	Rock Chip	1 m	Py veins and qtz stringers in black limestone
32341	Rock Chip	1 m	Pyrite/qty in andesite
32701	Rock Chip	1 m	Py pod in chlorite/calcite altered andesite with epidote stringers
32702	Rock Chip	1 m	Malachite stain along siliceous calcite/ chlorite altered andesite contact
32703	Rock Chip	2 m	6 m by 30 m mass py, magnetite lense on limestone - andesite contact

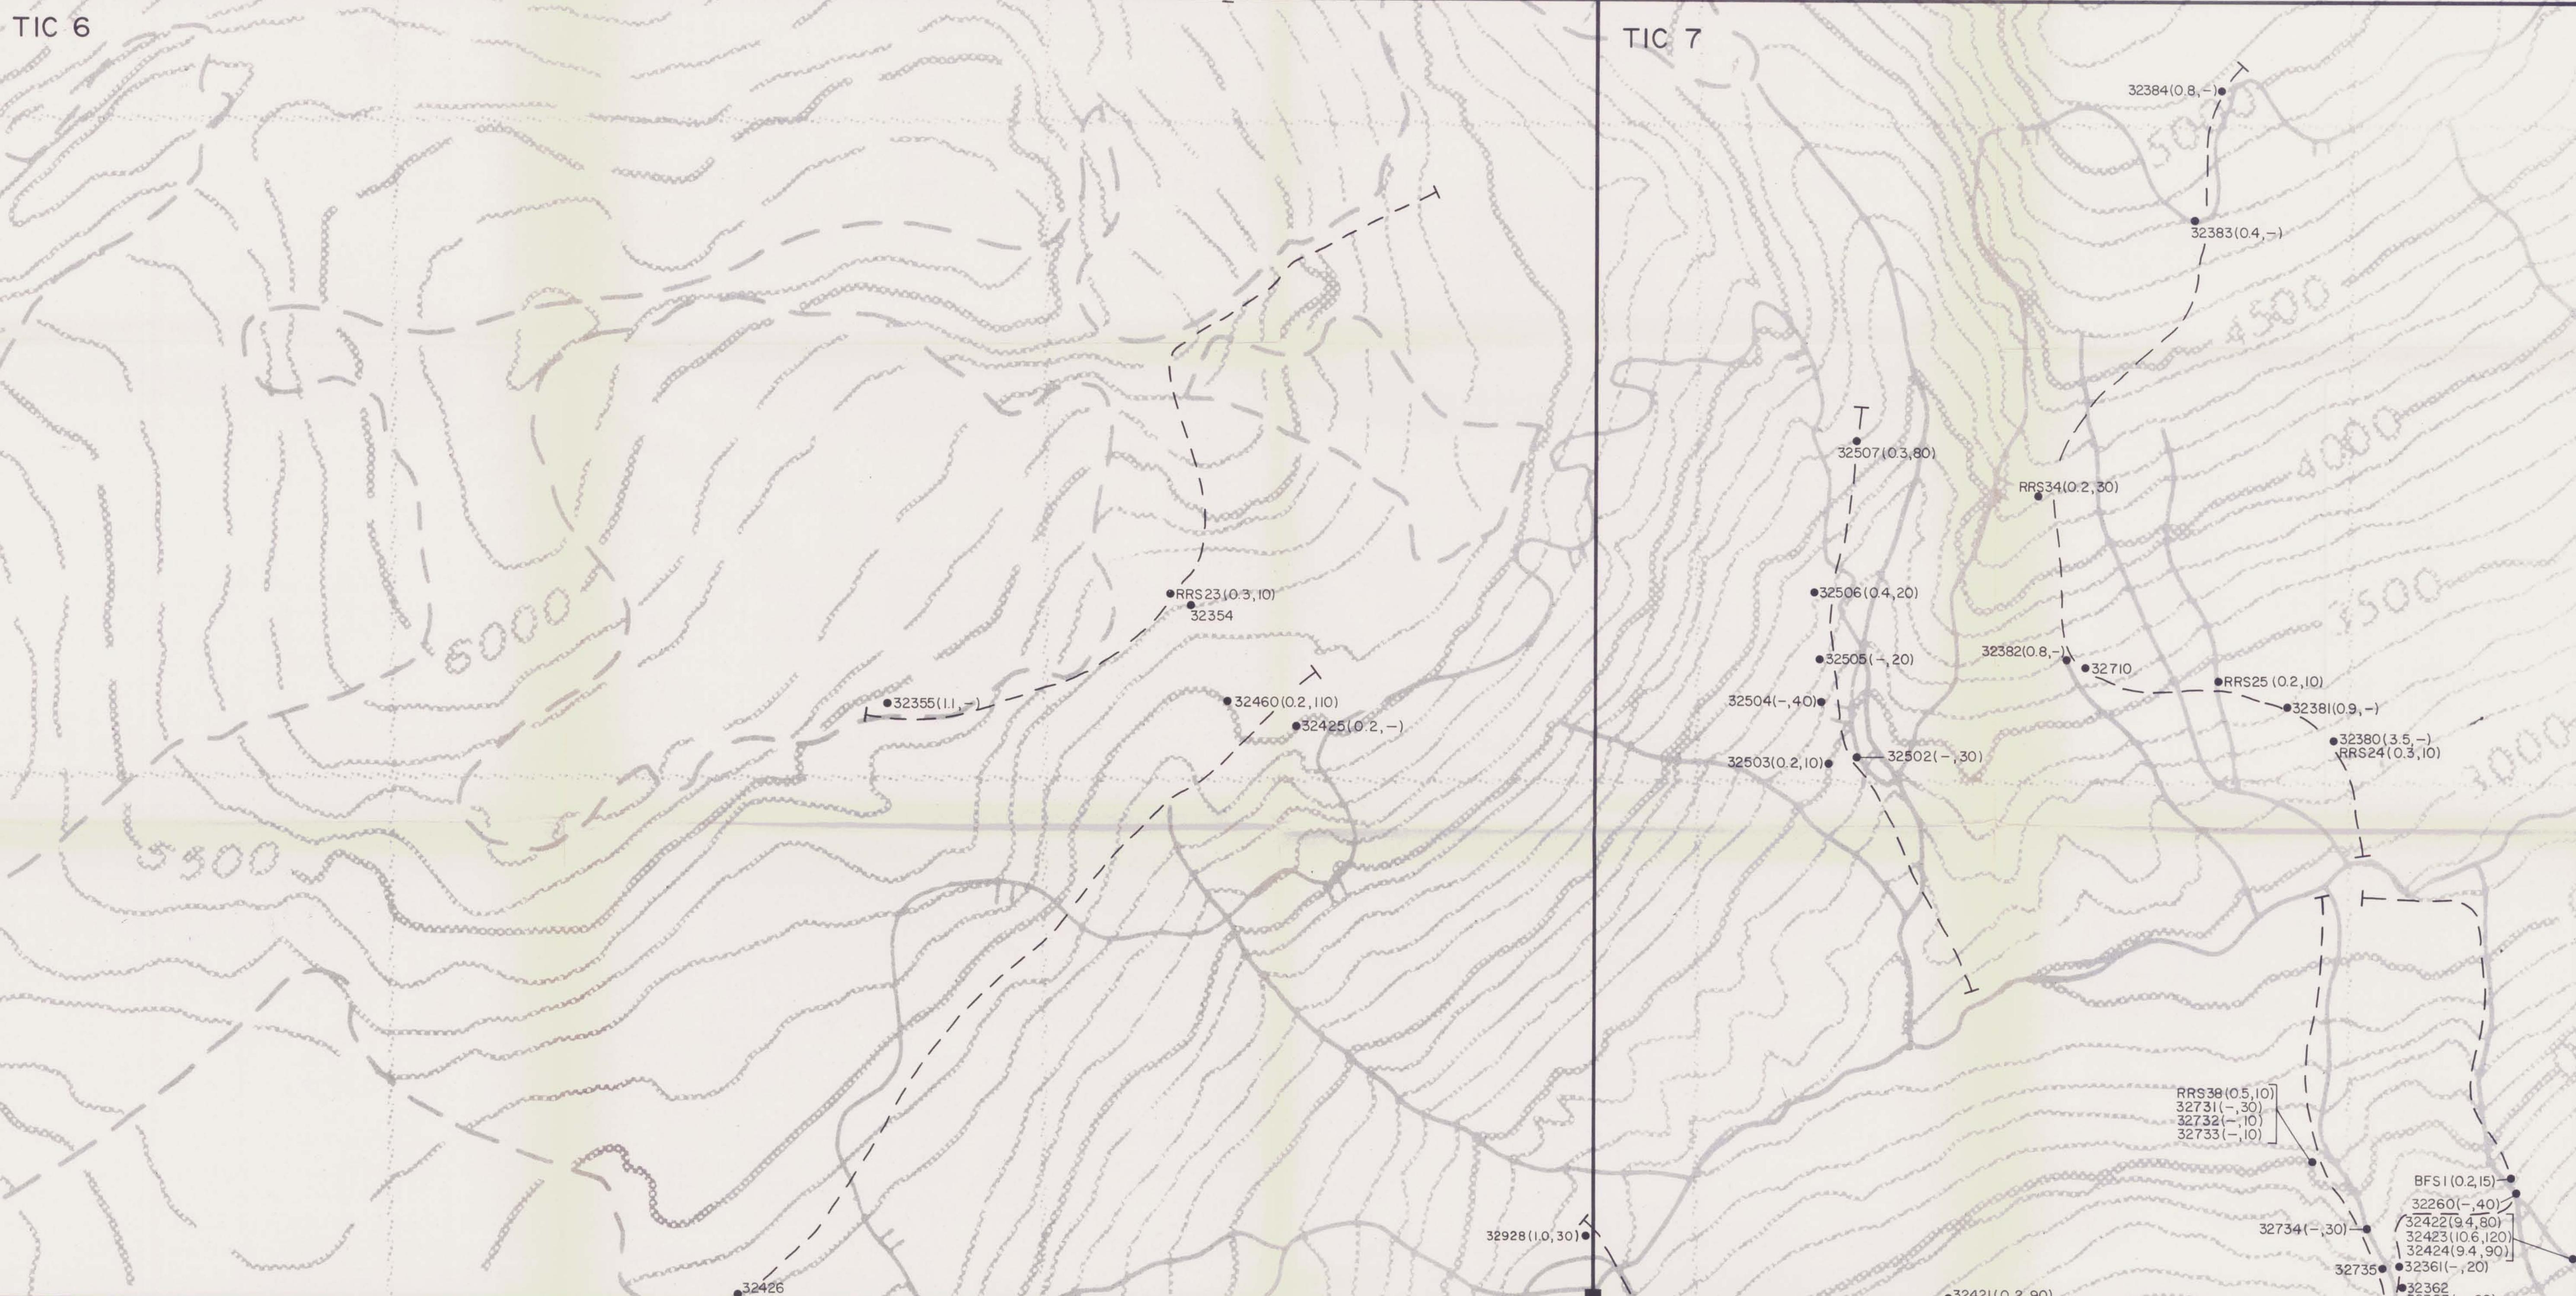

TIC 9 SAMPLE DESCRIPTIONS

<u>Sample No.</u>	<u>Sample Type</u>	<u>Sample Width</u>	<u>Description</u>
32264	Rock Chip	50 cm	Py in qtz
32265	Rock Chip	50 cm	Rust stained qtz
32266	Rock Chip	50 cm	Tr py in qtz
32267	Rock Chip	1 m	Rusty qtz in argillite
32268	Rock Chip	1 m	Chalcopyrite, py, malachite in qtz outcrop in sericitic schist
32269	Rock Chip	1 m	Py in qtz swarm in argillite
32270	Rock Chip	1 m	Rusty qtz with py in schistose
32271	Rock Chip	50 cm	Rusty qtz in argillite
32272	Rock Chip	1 m	Qtz swarm in argillite
32273	Rock Chip	1.5 m	Qtz veins in argillite
32275	Rock Chip	1.5 m	Qtz pod in iron stained sericite schist
32276	Rock Chip	2 m	Several qtz veins and pods
32277	Rock Chip	1 m	Malachite, chalcopyrite, py in qtz eins in altered schistose
32278	Rock Chip	50 cm	Rusty qtz in altered schist
32279	Rock Chip	50 cm	Vuggy qtz in rust stained schist
32280	Rock Chip	50 cm	Qtz vein
32281	Rock Chip	1 m	Frothy qtz mound
32282	Rock Chip	1 m	Qtz veins in altered schist
32283	Rock Chip	1 m	Qtz vein in schist
32339	Rock Chip	1 m	Siliceous chlorite altered argillite
32342	Rock Chip	1 m	Malachite / magnetite skarn on limestone/ chlorite contact
32343	Rock Chip	2 m	Pod with chalcopyrite, malachite, azurite in skarn zone
32344	Rock Chip	1.5 m	Chalcopyrite in skarn
32345	Rock Chip	50 cm	Small veins of chalcopyrite in limestone
32346	Rock Chip	1 m	Magnetite and malachite in skarn
32347	Rock Chip	50 cm	Calcite / chlorite band with pyrite
32348	Rock Chip	1 m	Pyrite in zone of calcite and chlorite

<u>Sample No.</u>	<u>Sample Type</u>	<u>Sample Width</u>	<u>Description</u>
32349	Rock Chip	1.5 m	Malachite/chalcopyrite/magnetite in chlorite/limestone alteration
32350	Rock Chip	50 cm	Pyrite in banded argillite and limestone
32351	Rock Chip	1 m	Chalcopyrite and malachite in frothy purple carbonate
32352	Rock Chip	1 m	Trace pyrite in siliceous andesite
32353	Rock Chip	2 m	40% pyrite in siliceous chloritic altn. zone
32508	Rock Chip	1 m	Malachite stained gossanous sediment
32509	Rock Chip	1 m	Chalcopyrite in sediments
32510	Rock Chip	1.5 m	Pyrite in brecciated sedimentary rock
32511	Rock Chip	1 m	Qtz veins in siliceous sediments
32512	Rock Chip	1 m	Pyrite/calcite in sediments
32513	Rock Chip	50 cm	Vuggy qtz
32514	Rock Chip	1 m	Qtz veins in sediments
32515	Rock Chip	1.5 m	Chalcopyrite in qtz veins in sediments
32516	Rock Chip	50 cm	Qtz vein
32517	Rock Chip	50 cm	Pyrite in qtz vein
32518	Rock Chip	50 cm	Pyrite in qtz vein
32519	Rock Chip	1 m	Pyrite in qtz in argillite
32520	Rock Chip	1 m	Qtz veins in argillite
32521	Rock Chip	1 m	Qtz veining in rusty argillite
32522	Rock Chip	1 m	Vuggy qtz veins in argillite
32523	Rock Chip	50 cm	Qtz/calcite with pyrite in argillite
32524	Rock Chip	50 cm	Vuggy qtz in siliceous sediments
32525	Rock Chip	1 m	Py in qtz carbonate veins
32739	Rock Chip	1 m	Hematite in calcite/chlorite breccia
32740	Rock Chip	1 m	Tr py/chalcopyrite with calcite on limestone / sericite schist contact
32741	Rock Chip	1 m	Tr py/chalcopyrite in limestone breccia
32742	Rock Chip	2 m	Pyritic zone in siliceous chloritic altn.
32743	Rock Chip	1 m	Mass py/chlorite in altered limestone
32744	Rock Chip	1 m	Calcite / chlorite altn with pyrite

<u>Sample No.</u>	<u>Sample Type</u>	<u>Sample Width</u>	<u>Description</u>
32744	Rock Chip	1 m	Calcite/chlorite alteration with py
32745	Rock Chip	50 cm	Calcite fracture filling with py, chalcopyrite
32746	Rock Chip	1 m	Diss. py in calcite/chlorite alteration veins in baked schist
32747	Rock Chip	1 m	Qtz/chlorite/iron oxide/py alteration in chloritic schist
32748	Rock Chip	1 m	Qtz veins in chloritic schist
32749	Rock Chip	1 m	Qtz breccia pod in chloritic schist
32750	Rock Chip	50 cm	Qtz-sericite schist in shear zone
32751	Rock Chip	1 m	Py in qtz in chloritic schist
32752	Rock Chip	1 m	Qtz altered schist
32753	Rock Chip	1 m	Same as 32752
32754	Rock Chip	50 cm	Qtz stringers in baked schist
32755	Rock Chip	1 m	Qtz/chlorite alteration in chloritic schist
32756	Rock Chip	1.5 m	Qtz alteration in baked schist
32757	Rock Chip	1.5 m	Pyrite and altered chlorite in qtz block
32758	Rock Chip	50 cm	Grab sample of qtz block
32759	Rock Chip	50 cm	Pyrite in altered chlorite/qtz/calcite block
32760	Rock Chip	1 m	Vuggy qtz stringers with py in sericite schist
32761	Rock Chip	50 cm	Qtz fracture filling in sericite schist
32762	Rock Chip	50 cm	Py in qtz on contact with chert/ altered schist
32763	Rock Chip	1 m	Chalcopyrite in qtz vein in siliceous altered zone
32764	Rock Chip	1 m	Qtz alteration in gossanous zone
32912	Rock Chip	50 cm	Pyrite, chalcopyrite in qtz
32913	Float		Float rock, mass py, arsenopyrite
32914	Rock Chip	1 m	Mass py, arsenopyrite in altered qtz
32915	Rock Chip	1 m	Tr py in syenite
32916	Rock Chip	50 cm	Py in chloritic qtz

<u>Sample No.</u>	<u>Sample Type</u>	<u>Sample Width</u>	<u>Description</u>
32917	Rock Chip	1 m	Shale with bands of pyrite
32918	Rock Chip	50 cm	Pyrite in frothy qtz stringer
32919	Rock Chip	50 cm	Qtz stringer with malachite stain
32920	Rock Chip	1 m	Pyritic zone in altered rock
32922	Rock Chip	1.5 m	Siliceous zone with qtz on shear
32923	Rock Chip	1.5 m	Mass py / chalcopyrite in qtz/chlorite alteration zone
32924	Rock Chip	1 m	Same as 32923
32925	Rock Chip	1 m	Resample 32923
32926	Rock Chip	2 m	Resample 32923
32927	Rock Chip	1 m	Resample 32923

- Geological Boundary (Defined, Approximate)
- Quartz Vein
- Schistosity
- Fault
- Mineral Occurrence
- LCP
- Contour Interval - 100 Feet

2	Volcanic – Andesite Breccia, Andesite Flows, Tuffs, And Pyroclastic Rocks
3	Sediments– Argillites, Shales , Cherty Sediments, Calcareous Sediments
7	Intrusive –Granite , Granodiorite , Quartz Diorite , Diorite
9	Metamorphic– Foliated Rocks , Clorite , Mica Sheets Argillaceous Schists , Gneisses(minor)
