SUMMARY AND CONCLUSIONS

A ground geophysical survey was carried out on the MILL 1 claim in November/December, 1988. A total of 21.4 line kilometers of geophysics was completed by the 30th of December.

There were several unavoidable problems with the survey. The greatest problem encountered was the unreliability of continuous transmission from the chosen stations. That is, shutdowns occurring on days other than those scheduled as maintenance. Weather and topography also caused delays.

VLF anomalies on the grid can be attributed to geology and known structures in the area. The magnetic survey produced one target area on the northwest end of the grid which can not be readily explained.

RECOMMENDATIONS

It is recommended that several of the magnetometer and VLF anomalies produced by the survey be followed up by close grid surveys employing geochemistry and geophysics.

INTRODUCTION

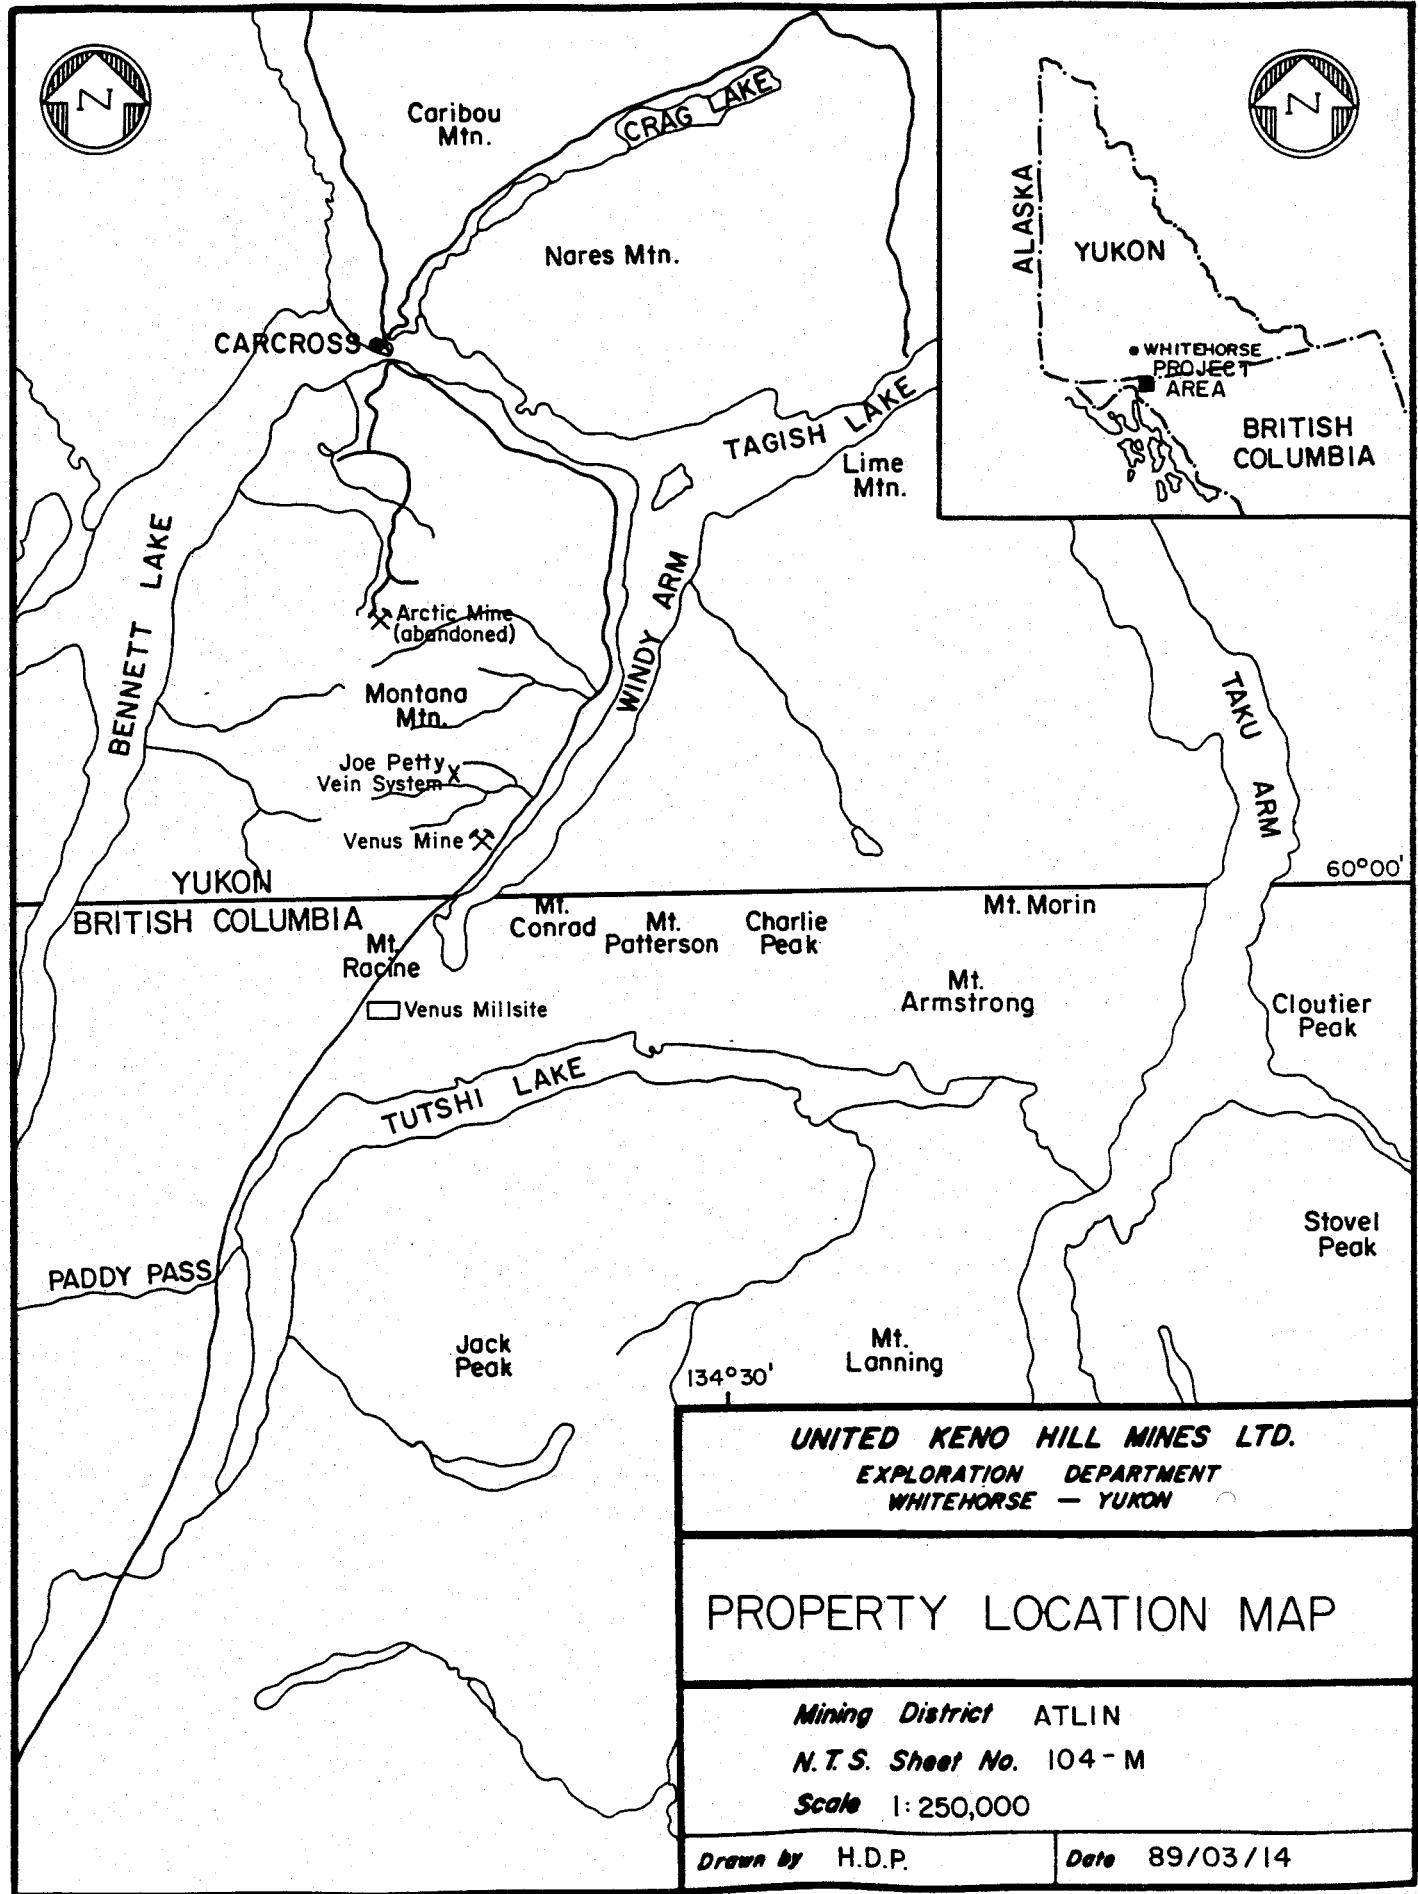

The Mill 1 claim consisting of 15 contiguous units was staked in 1987 to cover an area anomalous in copper and gold. The claims are located on the Venus Mill site at lat. 59° 57' long. 134° 42' on N.T.S. map sheet 104 M/15.

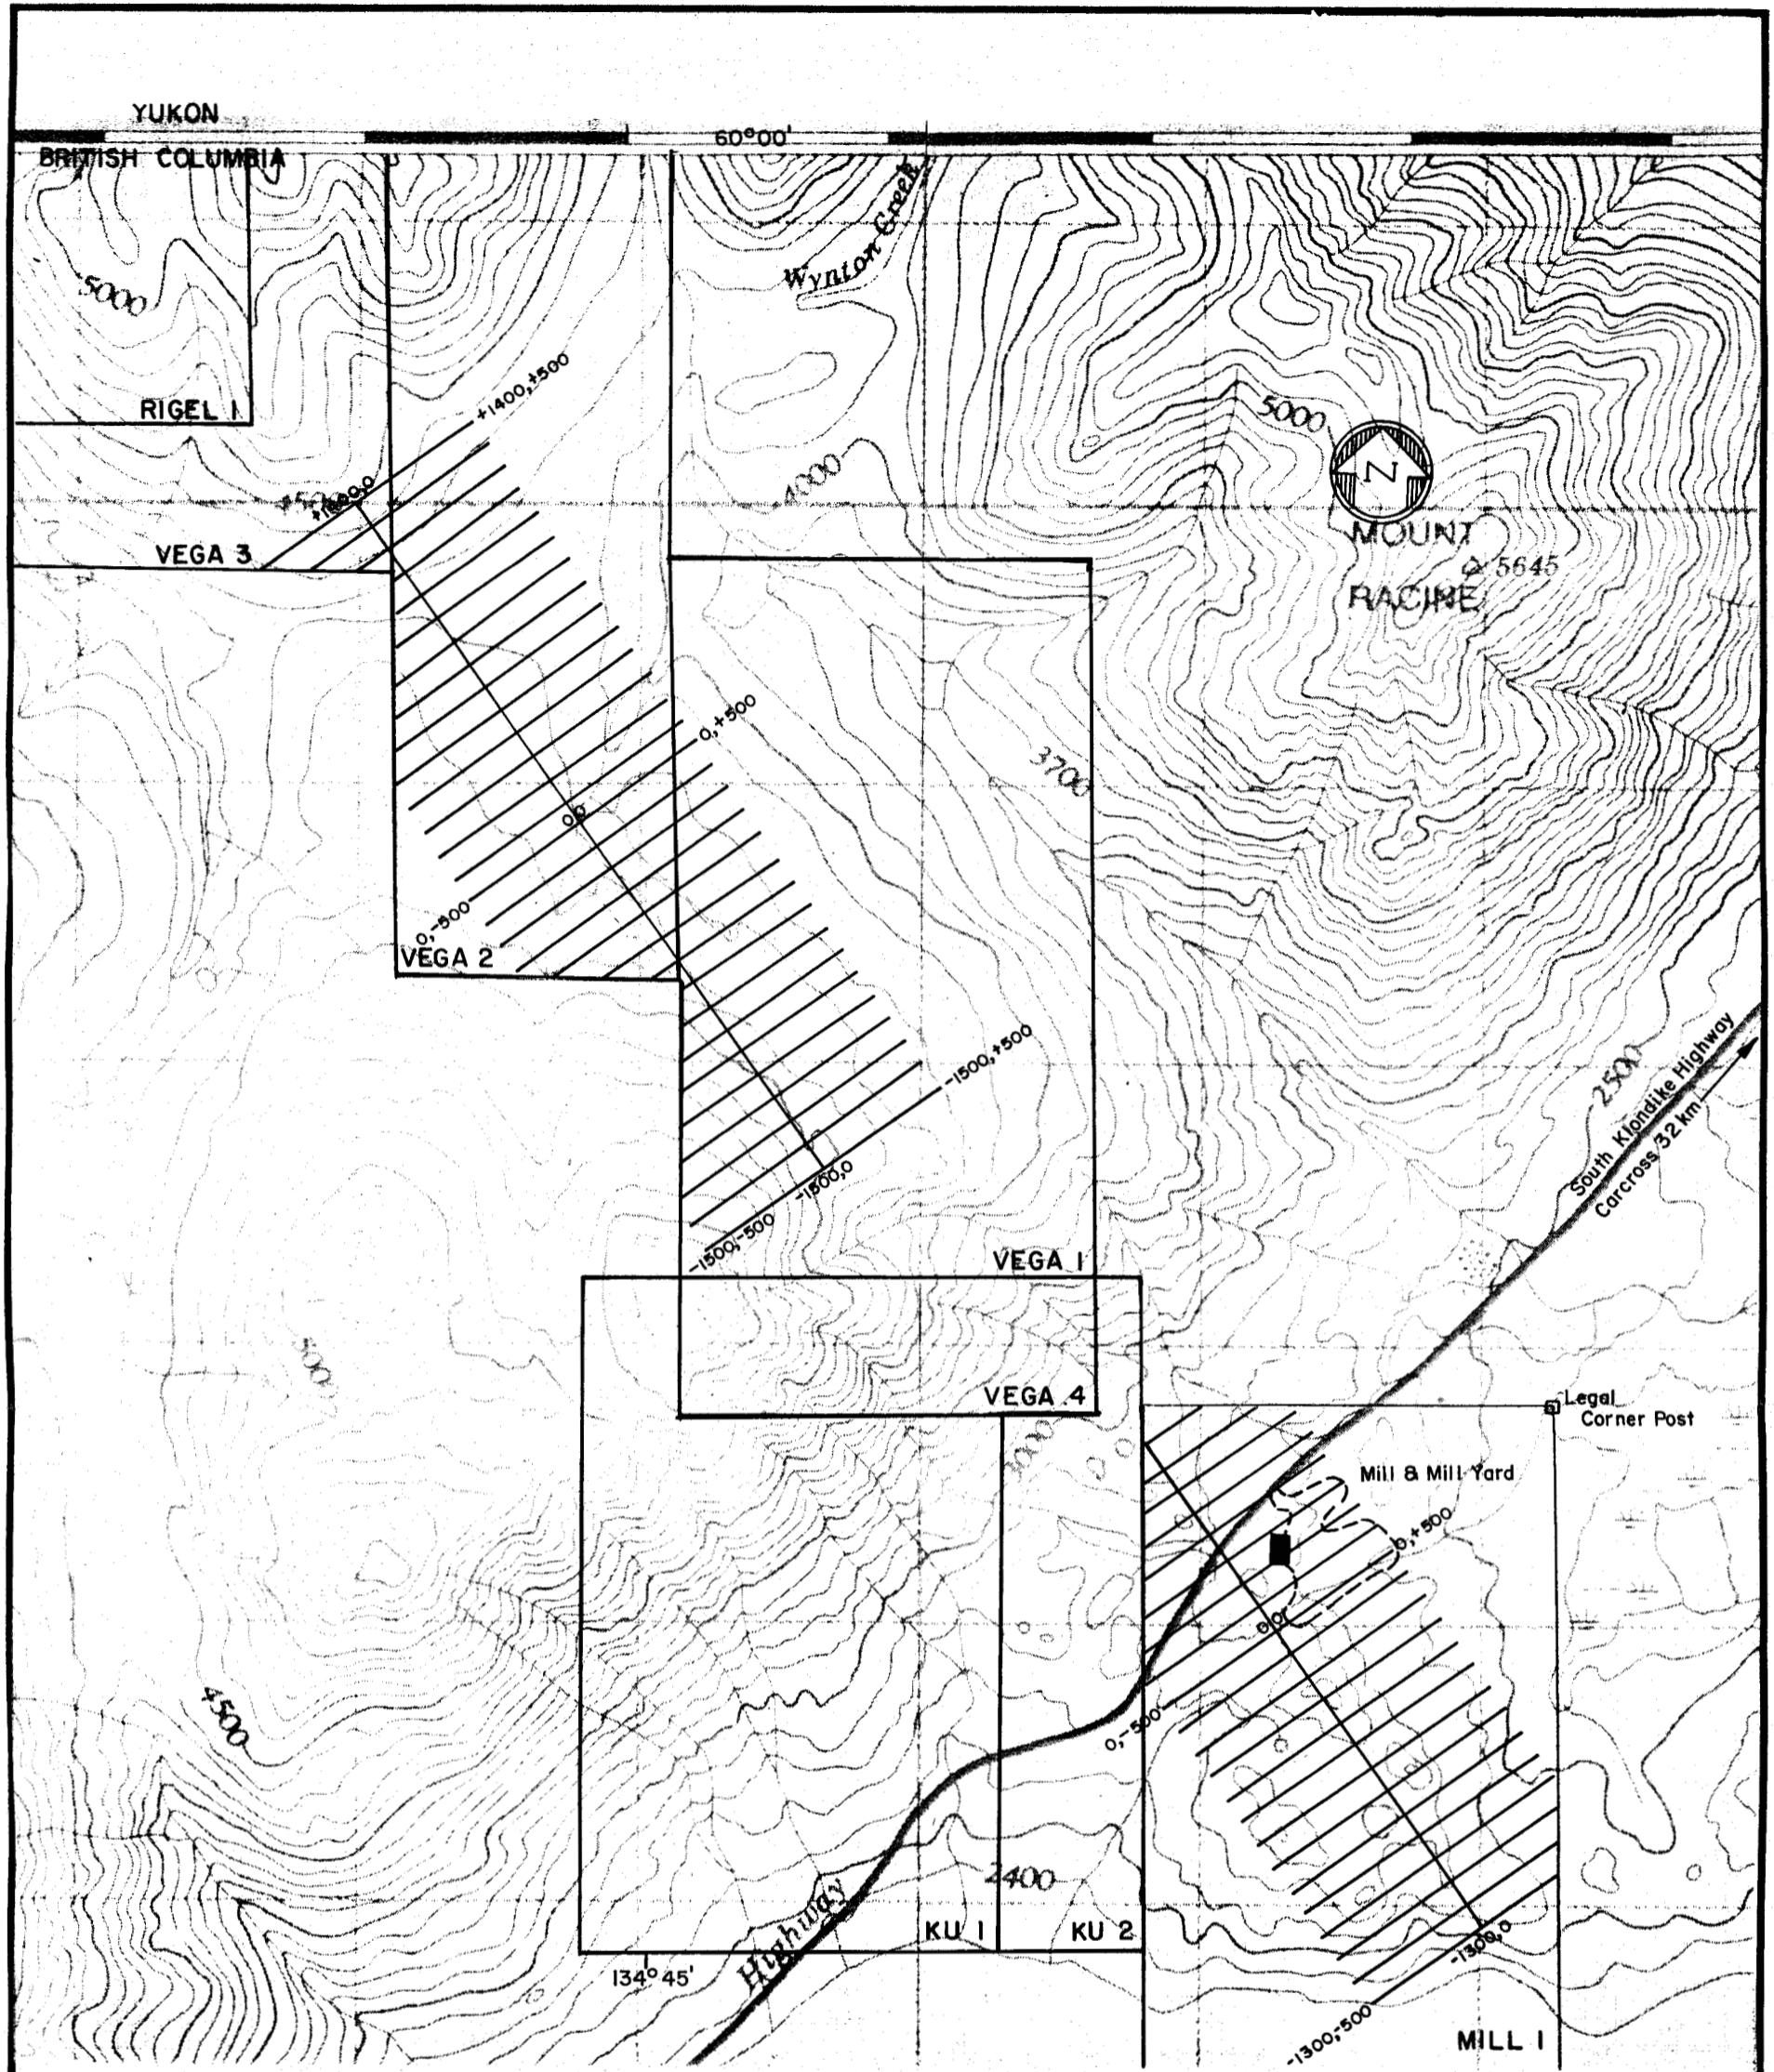

A portion of the claims were geologically mapped and prospected in 1987. Also, the area of the main showing has been partially soil sampled and geophysically surveyed. A 1,500 foot diamond drill program was conducted in the spring of 1988 in the area of the original showing. Since that time several more showings of different character have been located on the property.

This report deals with a geophysical survey conducted over a larger portion of the claim.

LOCATION AND ACCESS

The MILL 1 claim is located along the South Klondike Highway about 32 kilometers south of Carcross, Yukon Territory at the site of the Venus mill. The claim extends from Tutshi Lake north to the highway (Figure 1). Access is via the highway.

PROPERTY

The property consists of one claim comprised of fifteen units, each 500 meters on a side staked three units E-W by five units N-S (Figure 2).

GEOPHYSICAL SURVEY

The survey was accomplished over a newly cut and surveyed grid system which was established shortly before the geophysical survey commenced. The grid consists of a 2.1 km cut and surveyed baseline with 500 meter crosslines at 100 meter intervals for a total of 21.4 kilometers of cut line. Readings were taken at 12.5 meter intervals along the crosslines.

The instrument used in the survey was a Scintrex IGS (Integrated Geophysical System) consisting of a total field magnetometer and integrated VLF receiver capable of recording three VLF stations. This machine has the capability of automatically recording the time, station and total magnetic field for the magnetic survey, as well as the quadrature, total field and duration for the two VLF stations selected.

Line cutting was done by Denis Jacob, a local contractor. The geophysical survey was performed by Nick DeGraff, a local hire and supervised by the author.

Magnetic Survey

A Proton Magnetometer base station was employed allowing for automatic magnetic diurnal corrections on a daily basis by simply interfacing the field units with the base station after each day's survey. Total Field data was recorded in nanoteslas ($1 \text{ nT} = 1 \text{ gamma}$). The survey was conducted using an ambient value of 55,000 nT. Each day the field unit was connected to a laptop computer and the day's magnetometer and VLF data stored on computer disk and printed.

The magnetic data is presented as a 'plot' value which is simply the total magnetic field in nanoteslas minus a 'datum value' which remains constant (Map in Pocket A). This allows for a cleaner contour map and relieves the problem of 'false lows' created when an average value is used.

Results:

On the west side of the grid are two 75 meter by 175 meter circular anomalies separated by a linear VLF anomaly (Map in pocket A). The circular nature of these anomalies indicates that they are not related to the known linear features of the area but may instead be indicating the presence of a shallow buried intrusive. All other magnetic anomalies on the grid are linear in nature and can be related to known structural features of the area.

VLF

The two VLF stations used for this survey were Seattle (24.8 kHz) and Hawaii (23.4 kHz).

In-phase and quadrature are presented in percent of field. A Fraser filtered value was calculated from the in-phase (I/P) data. Fraser filtering is a simple mathematical transformation, changing in-phase cross-overs into positive peaks to ease presentation. The final results for each station are also presented as a percentage (Maps in Pockets B and C).

Results:

The VLF conductors which exist on the grid are clearly reflecting the geology of the area. The contact between the carbonate reefs and the conglomerates are clay and water filled fault zones as indicated by previous diamond drilling. These zones provide excellent current channeling. This trend is very strongly reflected by the Seattle channel. The Hawaii channel does not clearly show any structure. This is most likely due to the oblique angle between the lines and the station's location.

APPENDIX I

STATEMENT OF COSTS

Contract

Specific dates: November 21 to December 30, 1988.

Line Cutting:

Base Line	2.1km @ \$375/km	=	\$788
Crossline	19.3km @ \$200/km	=	\$3,860
		=	<u>\$4,648</u>

Rental Charges:

T. Hasak; Geophysical Equipment rental and shipping.	=	<u>\$5,422</u>

Assistants wages: 15 days @ \$150/day	=	\$2,250
Supervision: 15 days @ \$210/day	=	\$3,150
Report writing: 10 days @ \$210/day	=	\$2,100
Report preparation and expediting	=	\$3,151
Equipment, fuel and supplies	=	\$1,946
	=	<u>\$12,597</u>
	TOTAL =	<u>\$22,667</u>

CERTIFICATE OF QUALIFICATIONS

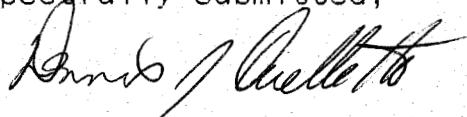

I, Dennis J. Ouellette with business address:

United Keno Hill Mines Limited
409 Black Street
Whitehorse, Yukon
Y1A 2N2

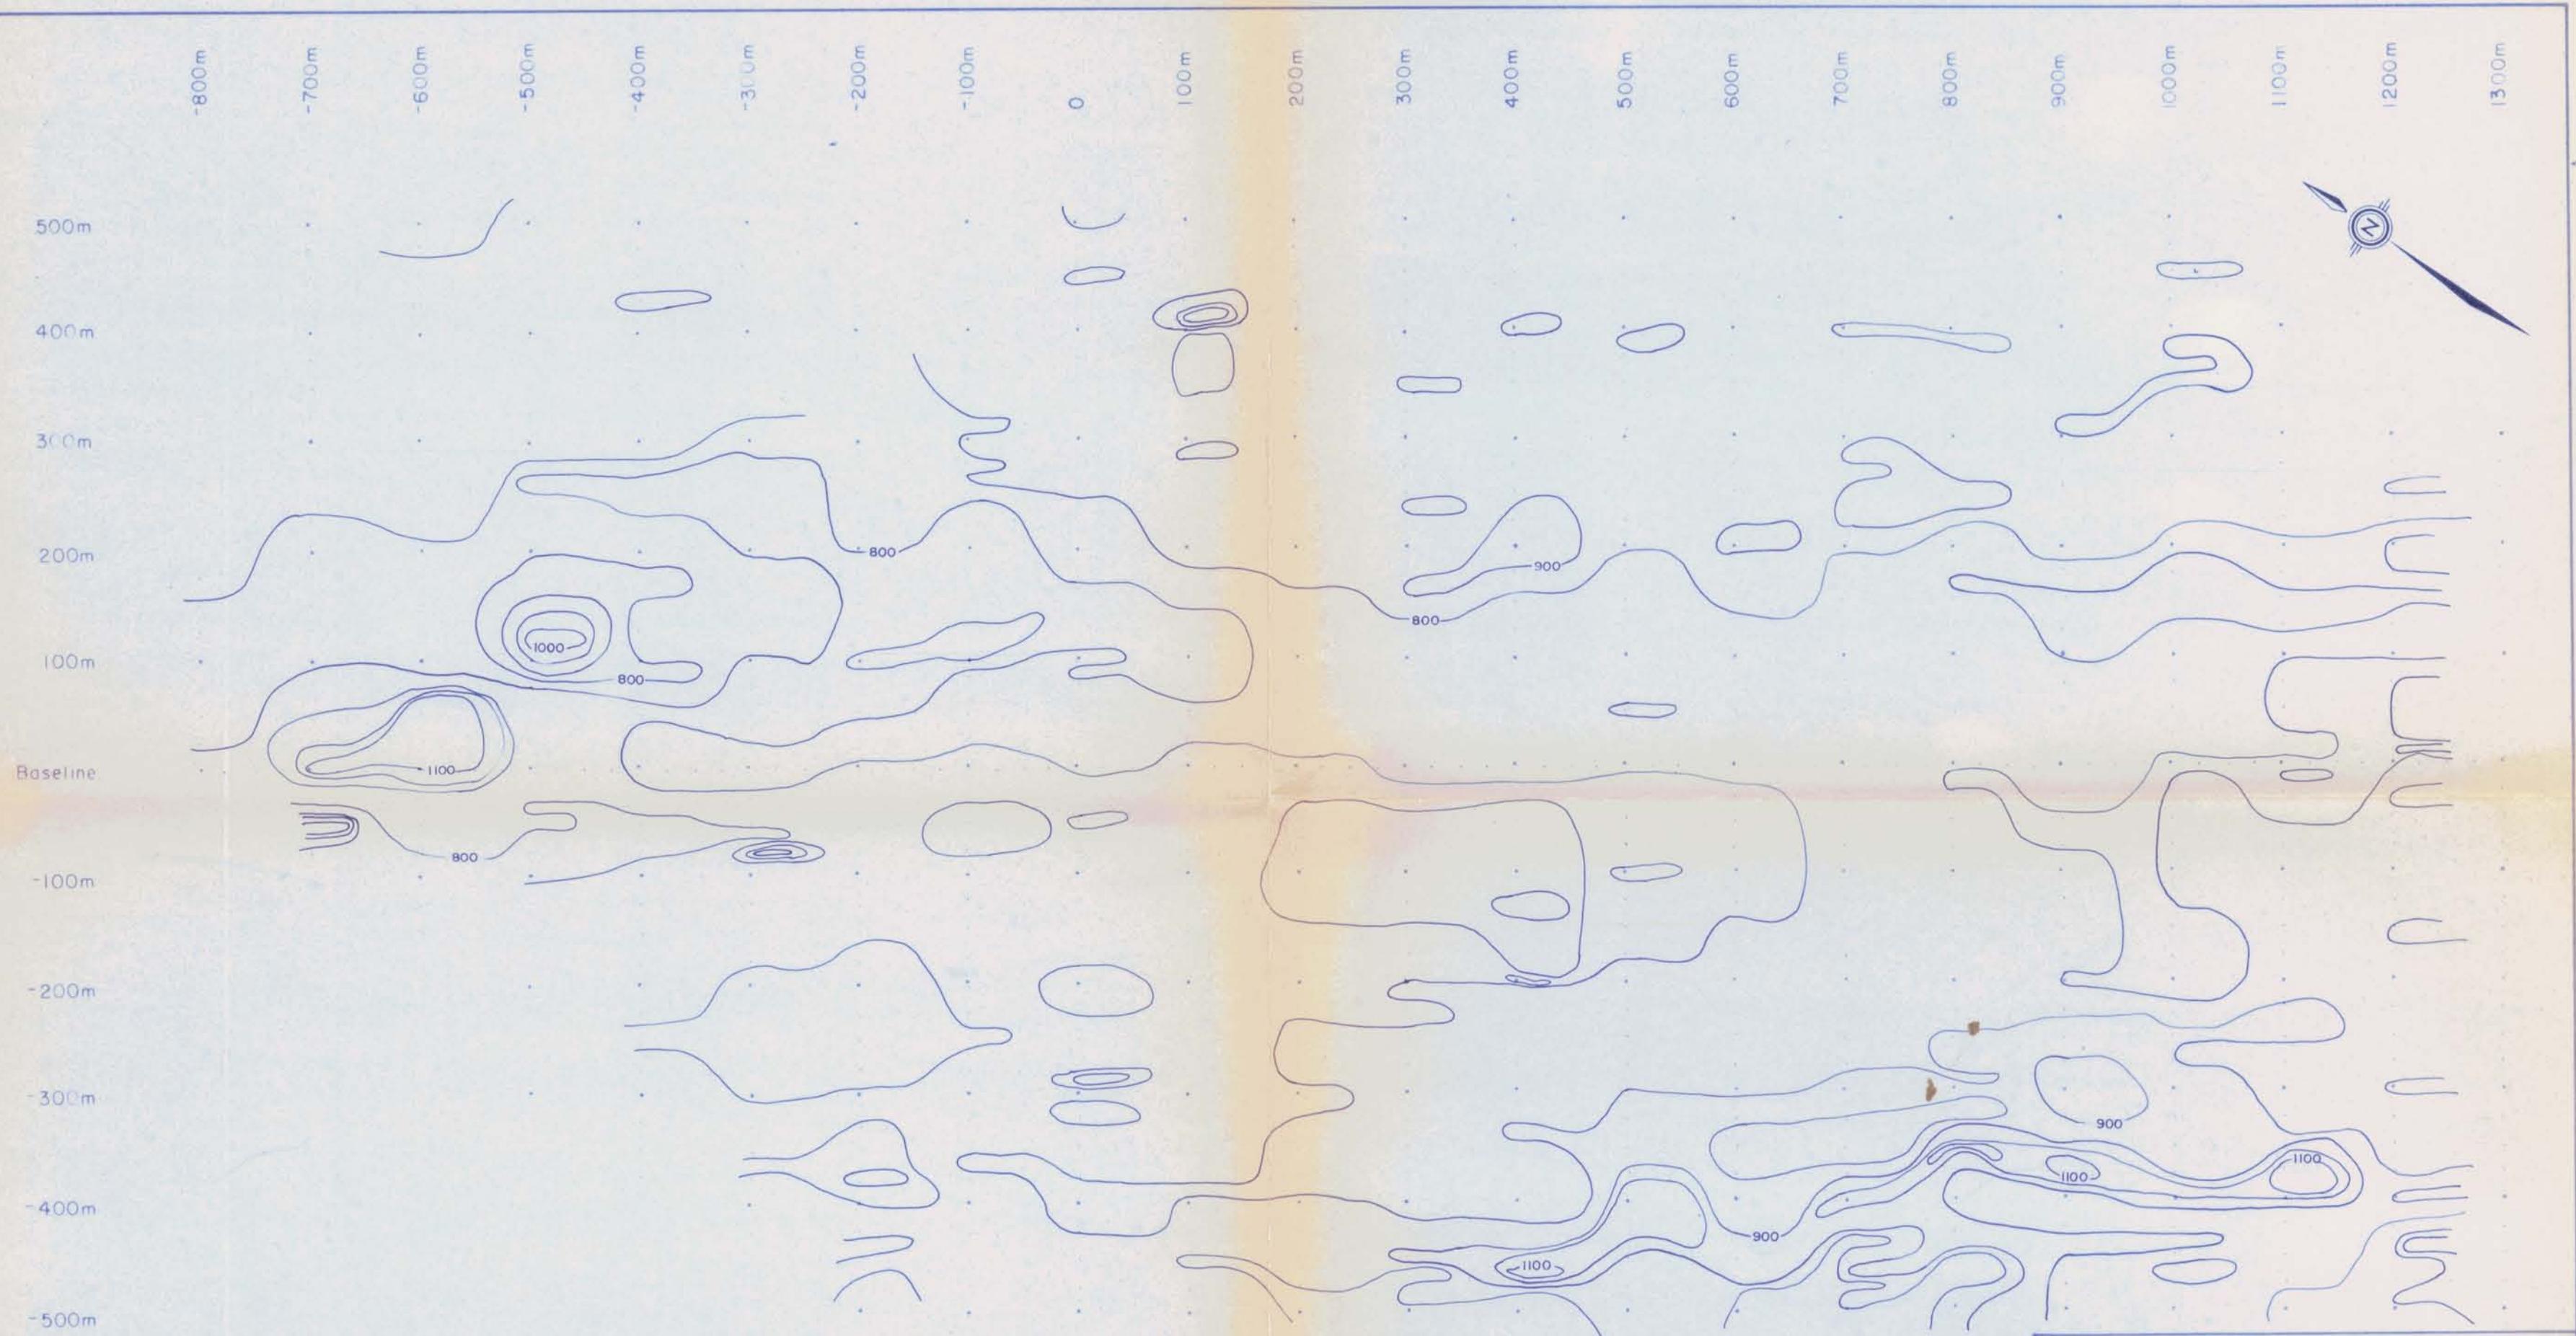

do hereby certify that:

1. I am a practicing geologist.
2. I hold a Bachelor of Science (Specialization) Degree (1984) in Geology from Brandon University.
3. I have been working in the field of mineral exploration since May of 1977.
4. I am a Member of the Geological Association of Canada.
5. This report entitled "Report on the Geophysical Survey of the MILL 1 Claim, B.C." dated March 20, 1989, is based on work done on the property during November and December, 1988.
6. I have not received nor do I expect to receive any interest, either directly or indirectly, in the property concerned in this report.

Respectfully submitted,

Dennis J. Ouellette,
B.Sc.
