ENCLOSURES

Geochemical Survey Assay Results, Gap Grid, Scale 1:2,500

INTRODUCTION

A geochemical survey was completed during the months of September and October 1988 over a portion of the Gap claim, recorded number 2276. The program was carried out under the supervision of P.J. Deveaux, consulting geologist, on behalf of Granges Inc. of Vancouver, B.C.

LOCATION AND ACCESS

The claim group is located 4 air kilometres north of Camborne, and approximately 35km southeast of Revelstoke, B.C., at latitude 50°N and longitude 117° 39.5'W on NTS map sheet 82K/13E.

The property is accessible by the Trans Canada Highway at Revelstoke or Nakusp on Provincial Route 23. The survey site is within an active logging area, with well maintained haulage and branch roads which traverse the claim.

The claim is located in the rugged Selkirk Mountain system. Much of the property consists of heavily timbered and logged-over slopes with some rock bluffs and more open alpine areas at higher elevations. Most of the rock outcrop is covered by a heavy layer of moss, making prospecting and geological mapping a slow process.

The area has a high snowfall, but due to a southeastern exposure is usually snowfree from early May until late October.

GEOLOGY

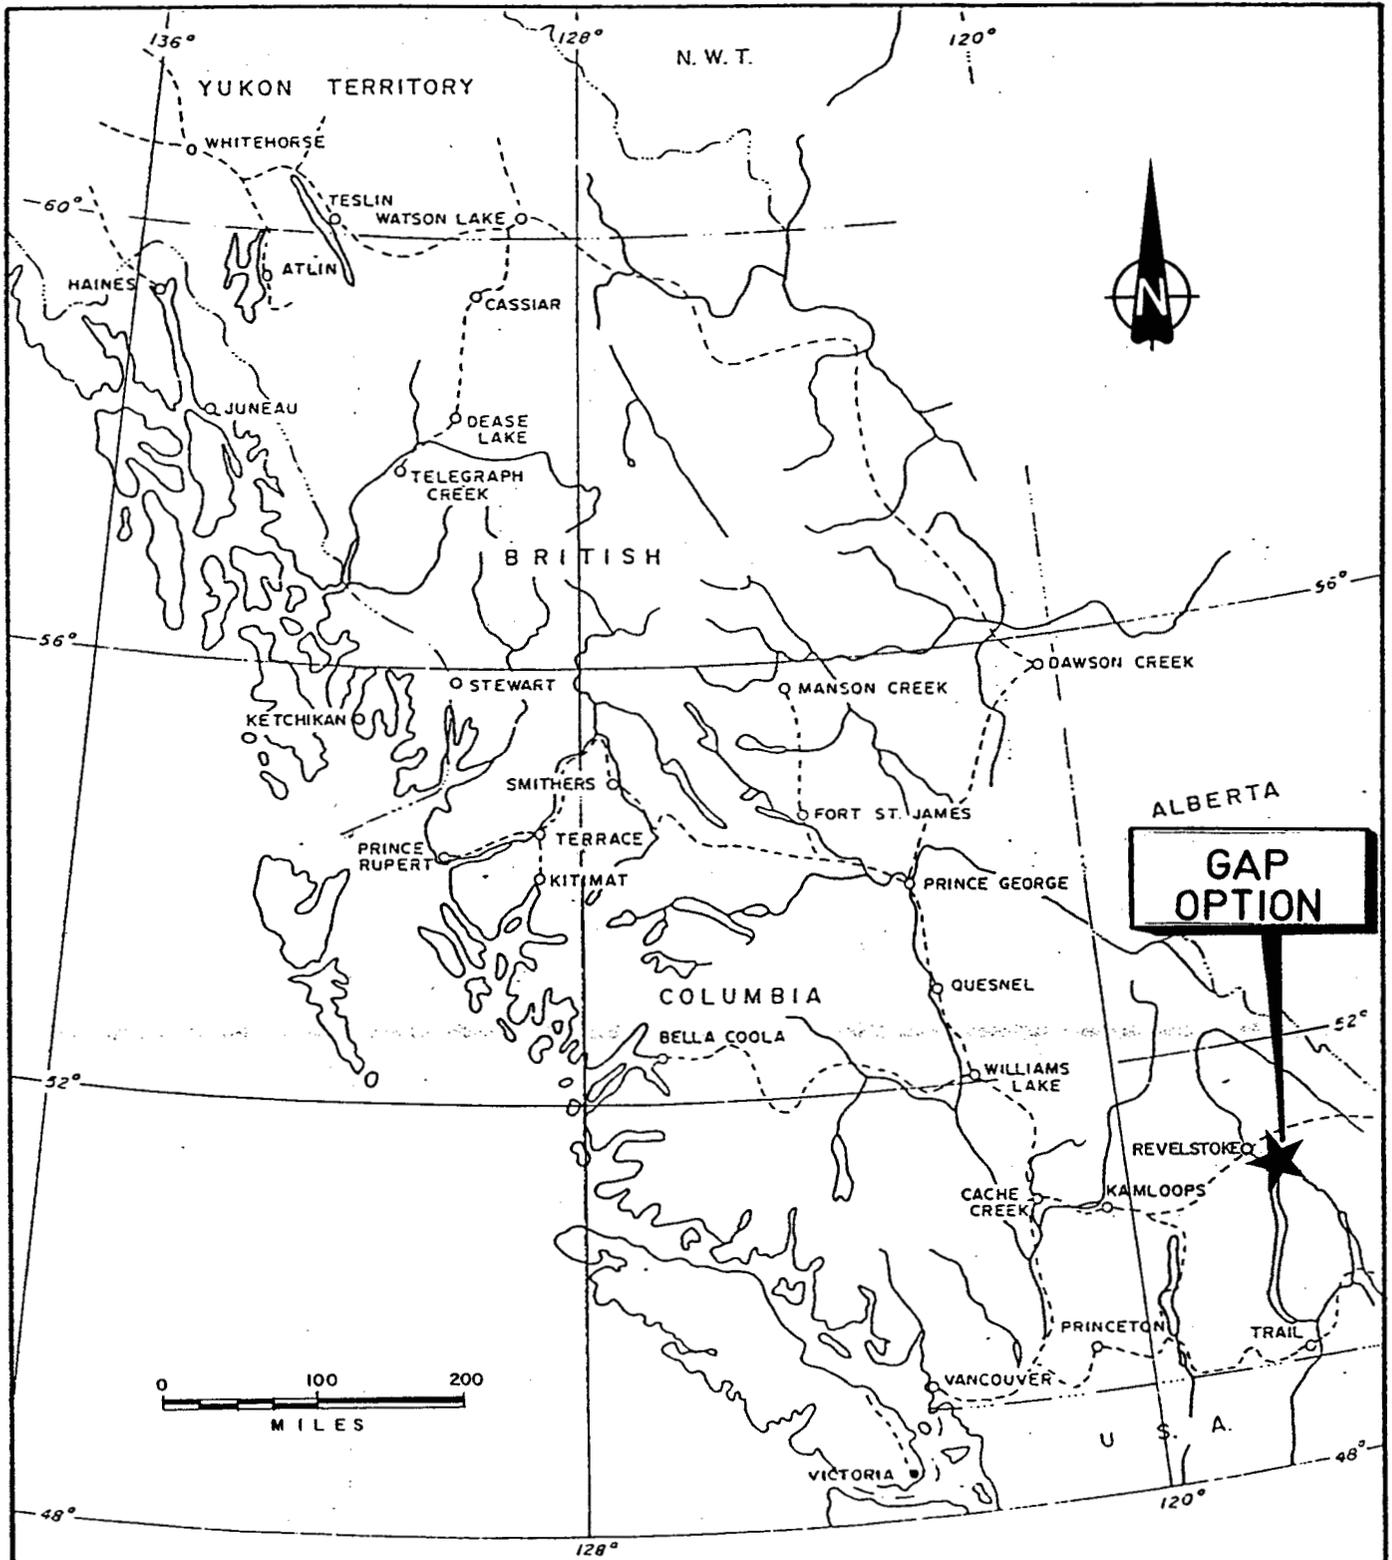

The geology of the area consist of phyllites and altered greenstone of the Lardeau Group which are early Paleozoic in age. Within this package is the Broadview formation which trends in a northwesterly direction and is the host to many gold prospects and past producers. This formation has been traced over a strike length of 160km.

GEOCHEMICAL SURVEY

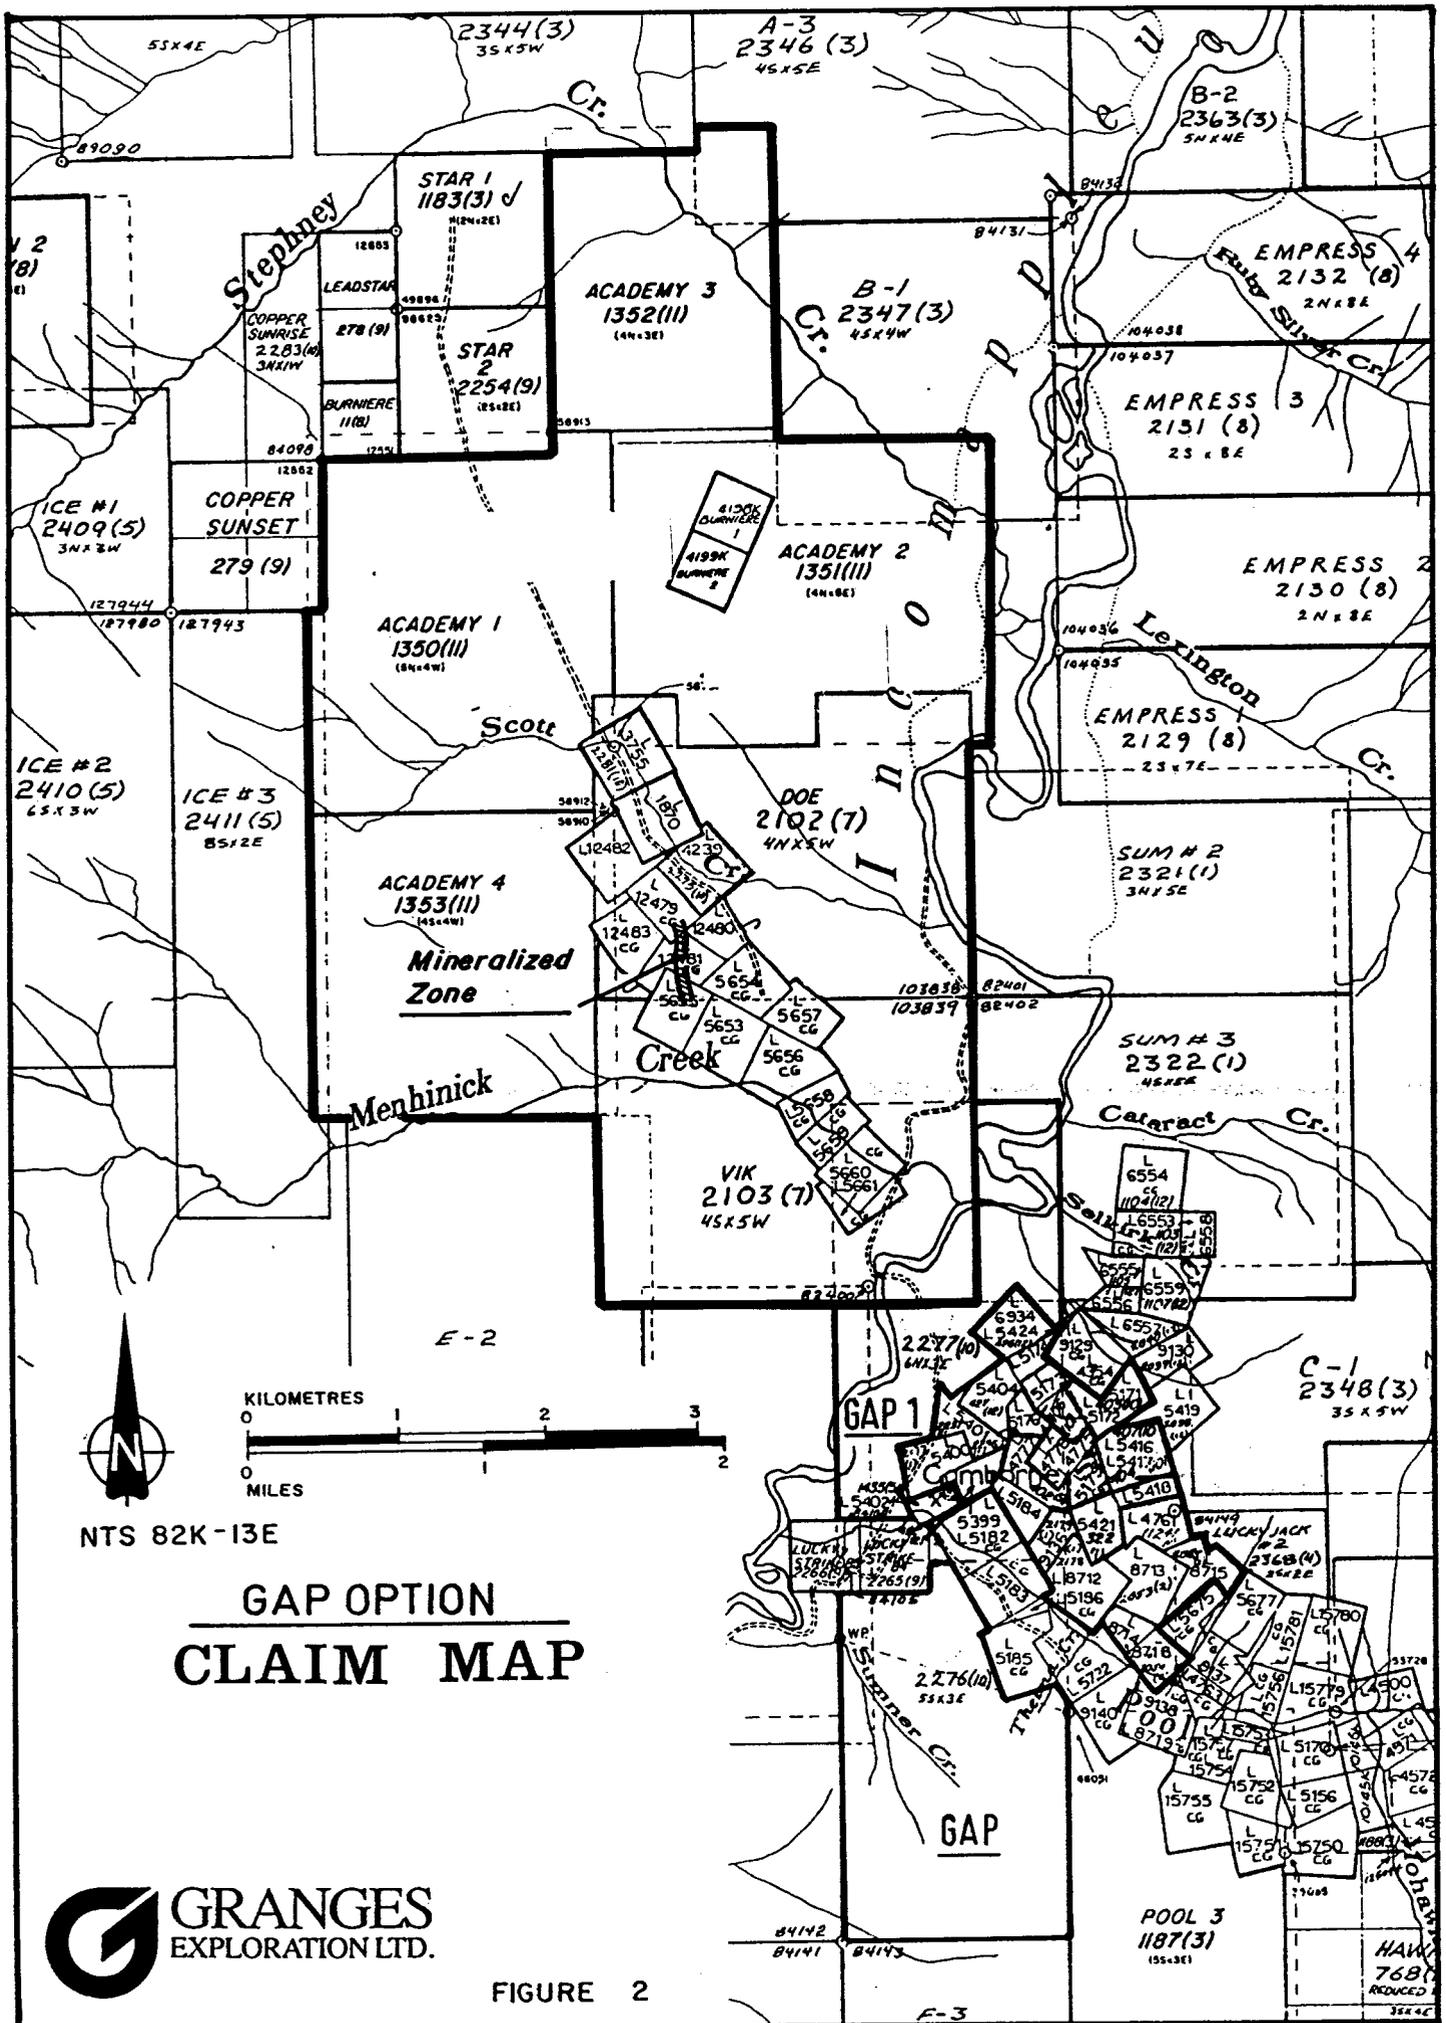

Soil samples were taken from the "B" horizon, where possible, every 23m at a depth of 5 to 30cm on section lines from 50 to 100 meters apart.

The compass and topochained section lines were flagged every 25m with the soil sample number being noted.

In order to obtain a better tie in for the survey, three previously-cut control lines that were established across the property from the 3900 north section line located at the 3100EBL (3550N to 5000N) 3600EBL (3500N to 6200N) and the 4100EBL (3190N to 6050N) were used.

Method Employed

The samples were analyzed for Au, Ag, Cu, Pb, Zn and As by the semi-quantitative multi-element ICP analysis, which is suitable for trace elements in the soil. To determine the metal content, the sample is first dried and sieved through a minus 80 mesh screen and submitted for a trace element analysis. A nitric-aqua regia digestion of 0.5gm of material liberates the metals in the soil which are then analyzed by the ICP method. For a gold determination a 10 gram sample is assayed by fire and finished by atomic absorption which has a detection limit of 5ppb.

Results Obtained

Nine hundred and two soil samples and four rock samples from quartz veins were submitted for assay, with several areas indicating anomalous gold values. Because of their suspicious appearance, several of the anomalous readings were resampled and reassayed with the results not being duplicated. A good example of this is line 5500N from 3850E to 4100N where the original assays along with the resamples yielded the following results:

<u>Co-ordinates</u>	<u>Original Sample</u>	<u>Resampled</u>
3850E	365 ppb	95 ppb
3875E	280 ppb	65 ppb
3900E	105 ppb	40 ppb
3925E	595 ppb	55 ppb
3950E	880 ppb	60 ppb
3975E	335 ppb	20 ppb
4025E	315 ppb	25 ppb
4050E	255 ppb	20 ppb
4075E	175 ppb	20 ppb
4100E	75 ppb	25 ppb

The four grab samples from quartz veins did not indicate anomalous gold values.

CONCLUSIONS AND RECOMMENDATIONS

Forty samples were collected on previously-outlined anomalous gold zones and submitted for assay. Assaying did not confirm or indicate any anomalous gold areas which would warrant further exploration.

As a result of the negative results from the resampling of selected areas further exploration is not recommended on the remaining elevated gold values indicated on the accompanying map.

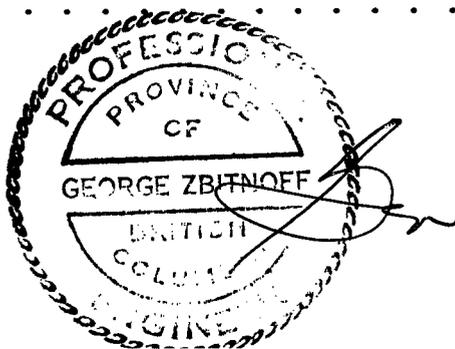

STATEMENT OF EXPENDITURES

Expenditures are submitted for two time periods: before October 14 anniversary date; and after anniversary date.

For 1988/89 assessment we wish to apply \$5,136.60 expenditures incurred during the post-anniversary date period. Please credit the pre-anniversary expenditures of \$27,907.51 to the Granges Inc. PAC account.

CERTIFICATE OF QUALIFICATIONS

I Arthur John O'Donnell, of Delta, British Columbia do hereby certify that:

- 1) I am Exploration Manager for Granges Inc. with office at 2300-885 West Georgia Street, Vancouver, B.C., V6C 3E8.
- 2) I am a graduate of Saint Francis Xavier University, Antigonish, N.S. with a BSc degree in geology. I also took an extra year of geology at Dalhousie University, Halifax, N.S.
- 3) That I have practised my profession for thirty years.
- 4) I have been a member in good standing of the Association of Professional Engineers of the Province of Ontario since 1970 and the Association of Professional Engineers Province of Manitoba since 1980.

Dated at Vancouver, B.C. this 24th day of May 1989.

A. J. O'Donnell, P.Eng.

STATEMENT OF QUALIFICATIONS
GEORGE W. ZBITNOFF
5160 CLIFF PLACE
DELTA, B.C.

Name: Zbitnoff, George William

Birth Date: August 15, 1938

Birthplace: Saskatoon, Saskatchewan

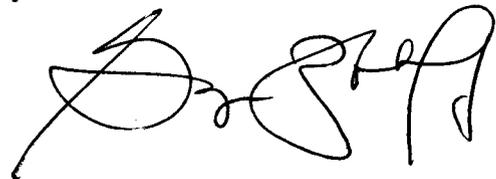

Graduated with Grade 12 matriculation from
Blaine Lake High School in 1955.

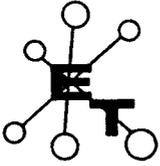

Graduated from University of Saskatchewan with a
B.A. (Geology and chemistry majors) in 1963.

Professional

- Associations:
- Member of the Association of Professional Engineers of the Province of Manitoba.
 - Member of the Association of Professional Engineers of the Province of British Columbia since 1973.
 - Member of the Canadian Institute of Mining and Metallurgy.

- Experience:
- Pre-graduation experience in geology with the Department of Mineral Resources of Saskatchewan.
 - May 1962 - Two and one half years, field geologist with Hudson Bay Exploration and Development, Flin Flon area.
 - January 1965 - Six years, field and resident geologist with Noranda Exploration Ltd., Flin Flon area.
 - February 1971 - Twelve and one half years, Assistant Manager, Granges Exploration Aktiebolag in Vancouver, B.C.
 - November 1983 to present - Vice President Exploration, Granges Exploration Ltd. in Vancouver, B.C.
 - Active geological experience in all provinces of Canada and parts of the United States and Mexico.
 - Participated in the discovery of Trout Lake Mine.
