INTRODUCTION

The writer Mr. Harry Davies (P. Geol) was retained by Mr. Dave Wiklund of Creston, B.C. to carry out a geochemical survey over a portion of the Elk Claims, which are located in the Nelson Mining District, East of Creston, B.C.

The collection of samples was carried out over an extended period from June to October 1989.

The collected samples were analyzed by Acme Laboratories of Vancouver, B.C.

One of the purposes of this work was to earn credits as outlined in the Mineral Act Regulations of B.C.

LOCATION

The Elk group of claims which consists of 24 two post claims are located about 8 Kilometers East of Creston, B.C. in the Nelson Mining District. The claims encompass an area of two by three Kilometers. The claim block, which trends North-South is located on the South facing slope of Iron Mountain, between the Goat River on the East and Arrow Creek on the West. Access is obtained via a logging road trending East along the pipe line right of way, from the East Arrow Creek road.

SUMMARY GEOLOGY (lithology, age, structure, alteration, mineralization, size, and attitude):

The Elk claims are underlain by shallow dipping West facing Middle Aldridge sediments....These sediments are dominantly interbedded Quartzites and Shales. Albition and Chloritization occur locally... Strike is North-South... Gabbro sills and Dykes and a granodiorite stock is found on the property... North-South trending faults occur on the property.....

TOPOGRAPHY

The two by three Kilometer block of claims is located on the South facing slope of Iron Mountain which itself forms the southern terminus of the Iron Range. Elevations on the claim block range from 900 to 1600 meters. The area exhibits a step like topography with narrow terraces alternating with steep slopes. The lower area exhibits some large flats.

Travel is relatively easy with few rock bluffs or rock out crops.

One minor stream which flows the year round, runs generally North-South along the eastern edge of the property.

The area is forested and a large portion of it has been logged.

OBJECTIVE

The soil geochemistry was undertaken to help evaluate the area known to be underlain by favorable geology, that together with the occurrence of albitized sediments and tourmaline float enhanced the area.

SAMPLING PROCEDURE

The geochemical sampling program was carried out over a portion of the claim area. The portion sampled covered an area 1500 meters by 1750 meters and is located on the North half of the claim area. All sample stations were spaced 50 meters apart, with each East-West line being 250 meters apart along a North-South surveyed base line. In each case a "B" soil sample was collected, put into a cloth bag and appropriately labeled as to location. A total of 237 samples were collected and forwarded to Acme labs in Vancouver, B.C. for 30 element I.C.P. analysis.

LABORATORY PROCEDURE

The samples were first dried at 105 degrees for 12 hours. They were then sieved through an 80 mesh screen, with the minus 80 fraction retained for analysis. A 0.5 gram sample was put into a test tube, along with 1 ml of water plus 3 ml conc. HCL and 1 ml Hno₃. The sample was digested in a water bath at 100 degrees. Water was then added to bring the volume up to 10 ml. The sample was then analyzed using the Inductively Coupled Plasma spectroscopy. A read out for 30 elements was acquired. The Lead and Zinc values were plotted for this report.

CONCLUSIONS

A large part of the area surveyed both geologically and geochemically appears to lack significant merit to warrant further work.

The anomalous values centered on lines 6S and 7S appears to be localized around the margin of an area of altered sediments. These altered sediments which were mapped to be at least 150 meters in width, may be a loci for sulphide mineralization.

Further detailed work in the area would be required to follow up on this prospect.

STATEMENT OF QUALIFICATIONS

NAME: Harry I. Davies

ADDRESS: Box 12 Boswell, B.C. V0B 1A0

EDUCATION: University of Manitoba,
BSc (H) Geology 1950

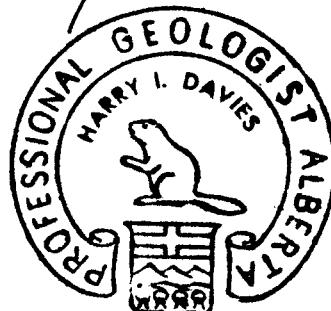

EMPLOYMENT: Manitoba Department of Mines,
field work on Pre-Cambrian
(Three field seasons)

Mobil Oil of Canada Ltd.,
Ten years, with two years
field work in structural
mapping

Thirty years consulting
Practice with roughly 60%
in oil geology and 40%
in mineral exploration

ASSOCIATIONS: Professional Engineers of
Alberta, (Geologist)
Member of 30 years.

Harry Davies

STATEMENT OF EXPENDITURES

Cost related to 1750 M. of base line, soil sampling lines and collecting 237 soil samples on the Elk Claims, Kitchener area, Nelson Mining Division, British Columbia.

Base line and soil sampling July - September 1989.

SALARIES:

H. Davies (Supervision)	3 Days	\$ 900.00
Labour (soil sampling)	8 Days	800.00
Base line		300.00

TRANSPORTATION:

4WD (gas, oil incl.)	6 Days @ \$60/Day	360.00
----------------------	-------------------	--------

ASSAYS:

Acme Laboratories	1682.70
Shipping Samples	35.90

SUPPLIES:

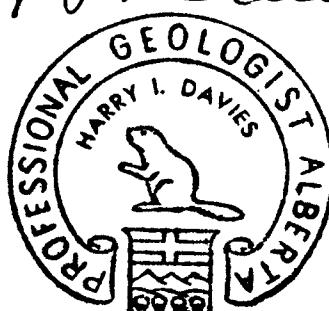

Ribbon, thread, sample bags, etc.	105.00
-----------------------------------	--------

REPORT PREPARATION:

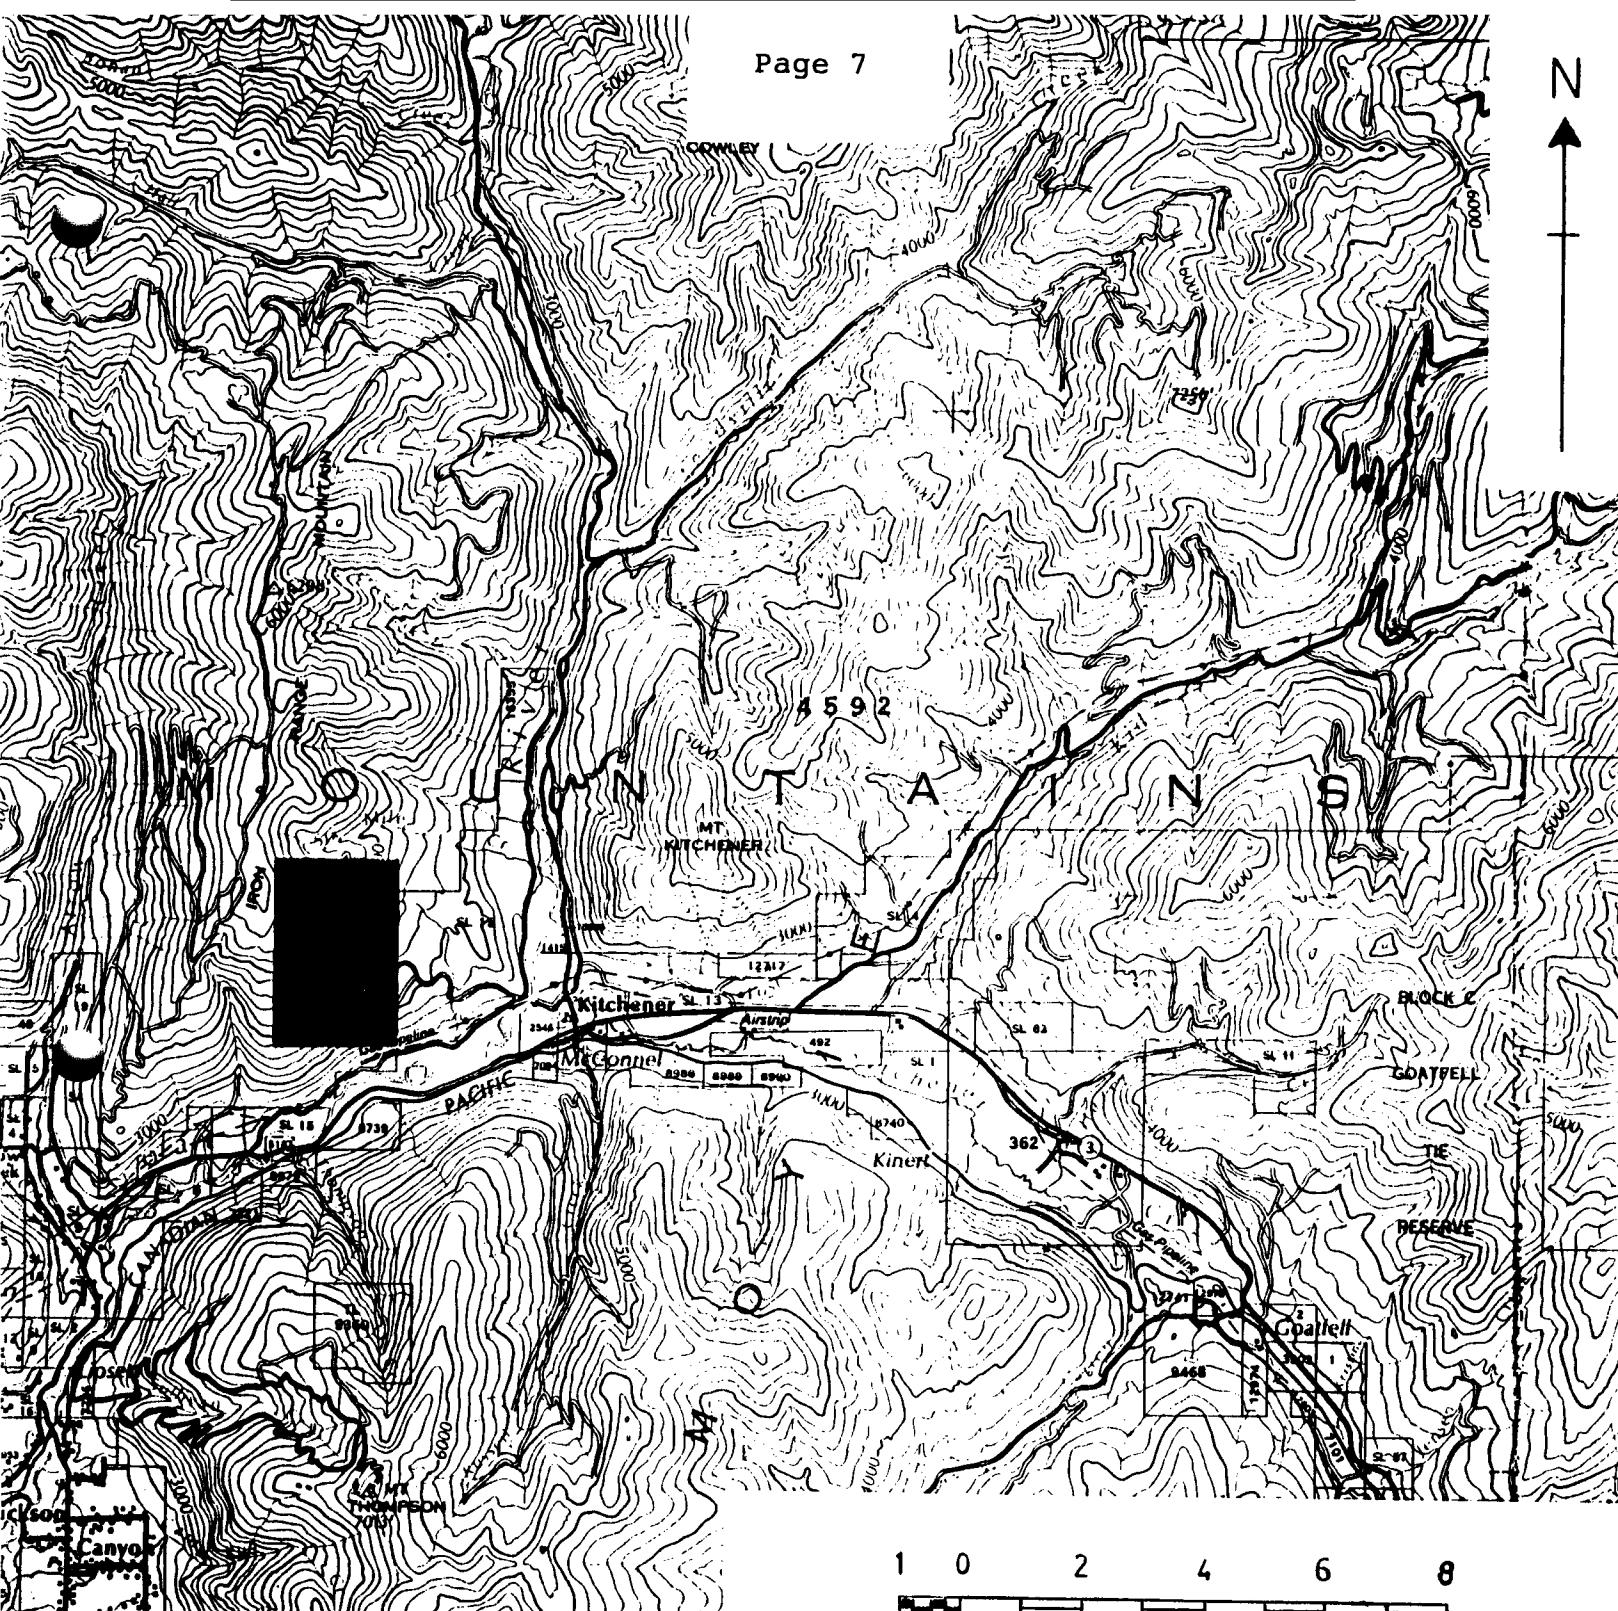

Map construction, writing report	500.00
Drafting, typing, photocopying, etc.	<u>200.00</u>

TOTAL EXPENDITURES \$4883.60

Submitted by H.I. Davies (P. Geol)

GEOCHEMICAL ANALYSIS CERTIFICATE

ICP - .500 GRAM SAMPLE IS DIGESTED WITH 3ML 3-1-2 HCl-HNO₃-H₂O AT 95 DEG. C FOR ONE HOUR AND IS DILUTED TO 10 ML WITH WATER.
 THIS LEACH IS PARTIAL FOR MW FE SR CA P LA CR MG BA TI B W AND LIMITED FOR NA K AND AL. AU DETECTION LIMIT BY ICP IS 3 PPM.
 - SAMPLE TYPE: Soil -80 Mesh

DATE RECEIVED: AUG 11 1989 DATE REPORT MAILED: Aug 15/89 SIGNED BY: C. L. YOUNG, D. YOUNG, C. LEONG, J. WANG; CERTIFIED B.C. ASSAYERS

GEOCHEMICAL ANALYSIS CERTIFICATE

ICP - .500 GRAM SAMPLE IS DIGESTED WITH 3ML 3-1-2 HCL-HNO₃-H₂O AT 95 DEG. C FOR ONE HOUR AND IS DILUTED TO 10 ML WITH WATER.
 THIS LEACH IS PARTIAL FOR MN FE SR CA P LA CR MG BA TI B W AND LIMITED FOR NA K AND AL. AU DETECTION LIMIT BY ICP IS 3 PPM.
 - SAMPLE TYPE: Soil -80 Mesh

DATE RECEIVED: OCT 10 1989 DATE REPORT MAILED: Oct 12 /89 SIGNED BY... C.L. D.TOYE, C.LEONG, J.WANG; CERTIFIED B.C. ASSAYERS

DAVID WIKLUND

File # 89-4162
