Consolidated Ramrod Gold Corporation

Report On Diamond Drill Hole F93-22

Marilyn 1 Claim

(Fors Property)

Fort Steele Mining Division

Peter Klewchuk

November, 1993.

1.0 Introduction

The single unit Marilyn 1 claim is part of the Fors property which includes 258 units in 73 claims. The property is underlain by Precambrian Helikian Aldridge Formation rocks which host the world class Sullivan orebody, 42 km to the north at Kimberley, B.C.

Diamond drill hole F93-22 is one of a series of holes drilled on the Fors property to test the Aldridge Formation for evidence of base metal deposits.

2.0 Location and Access

The Fors property is located about 18 km south southwest of Cranbrook, British Columbia, centered approximately at 49°22'N latitude, 115°53'W longitude on N.T.S mapsheet 82G/5W. Access is by paved highway and the Lamb Creek Forestry road.

3.0 Regional Geology

The area of the Fors property is part of the Purcell Anticlinorium which is comprised of fine grained clastic and carbonate rocks of the Aldridge, Creston, Kitchener and younger formations. A major structure, the Moyie Fault, cuts the southeastern corner of the property and displaces northern Aldridge Formation rocks against much younger Kitchener Formation rocks to the south. The Aldridge Formation is host to the world class Sullivan orebody at Kimberley, B.C., approximately 42 km north of the Fors property.

4.0 Property Geology

Early exploration on the Fors property in the mid-1960's discovered local concentrations of base metals. Cominco Ltd. drilled a series of holes to test for a base metal deposit.

....2

Late in 1992, Consolidated Ramrod Gold Corporation became interested in the Fors property because of newly discovered evidence of significant mineralizing activity. The present Fors property was optioned and staked and an aggressive program of exploration undertaken.

The initial drilling by Ramrod focused on an area west of Monroe Lake, near the original discoveries of surface mineralization. Subsequent drilling included a number of step-out holes to further evaluate the property. Drill hole F93-22 was one of these step-out holes.

5.0 Diamond Drill Hole F93-22

Diamond drill hole F93-22 was drilled to test the Aldridge Formation for base metal mineralization on the Marilyn 1 claim. The hole was intended as a northeastern step-out from a series of holes drilled earlier, west of Monroe Lake. The collar site was selected near the end of an existing forest access road to minimize surface disturbance. It was anticipated that overburden depth would only be about 10 or 15 meters.

The hole was collared at -75° , oriented at an azimuth of 160° to cross sedimentary bedding at a favourable angle. It was intended that NQ-sized core would be recovered.

Drill hole F93-22 was unsuccessful at reaching bedrock. The hole was triconed in overburden to a depth of 80.8 meters where it was abandoned due to difficulties in keeping the hole open. Further drilling on the Marilyn 1 claim would have required building a drill access road. The drill was subsequently moved south to another site along an existing road, off the Marilyn 1 Claim.

6.0 Conclusions

Diamond drill hole F93-22 was unsuccessful at getting to bedrock. The hole was abandoned at 80.8 meters in overburden.

STATEMENT OF EXPENDITURES

DIAMOND DRILL PROGRAM (Hole F93-22)

ON MARILYN 1 CLAIM FORT STEELE M.D.

Covering the period of March 20th to March 25th, 1993

INDIRECT:

Salaries: D. Pighin - Geologist - Planning & supervision, 3 days @ \$200/day 600.00

> P. Klewchuk - P.Geo. - Report writing 100.00 0.5 days @ \$200/day

Transportation: 1 - 4X4 truck; 1 day @ \$100/day 100.00

DIRECT:

LeClerc Drilling Ltd. Box 94, Beaverdell, B.C. VOH 1A0 Hole F93-22 = 80.8 meters

\$6,915.34

Total Direct & Indirect = \$7,715.34

NORTH MOYIE LAKE AREA

CARRIED OUT ON THE MARILYN 1 CLAIM

in the Fort Steele Mining Division of the Province of British Columbia

More Particularly N.T.S. 82G/5W

AFFIDAVIT

- I, Peter Klewchuk, of the City of Kimberley, in the Province of British Columbia, make oath and say:
- 1. That I am employed as a Geologist by Consolidated Ramrod Gold Corporation and as such, have personal knowledge of the facts to which I hereinafter depose:
- 2. That annexed hereto and marked as Exhibit "A" to this my Affidavit is a true copy of expenditures incurred on a Diamond Drill Program, on the Marilyn 1 mineral Claim;
- 3. That the said expenditures were incurred between the 20th day of March, 1993 and the 25th day of March, 1993 for the purpose of mineral exploration.

AUTHOR'S QUALIFICATIONS

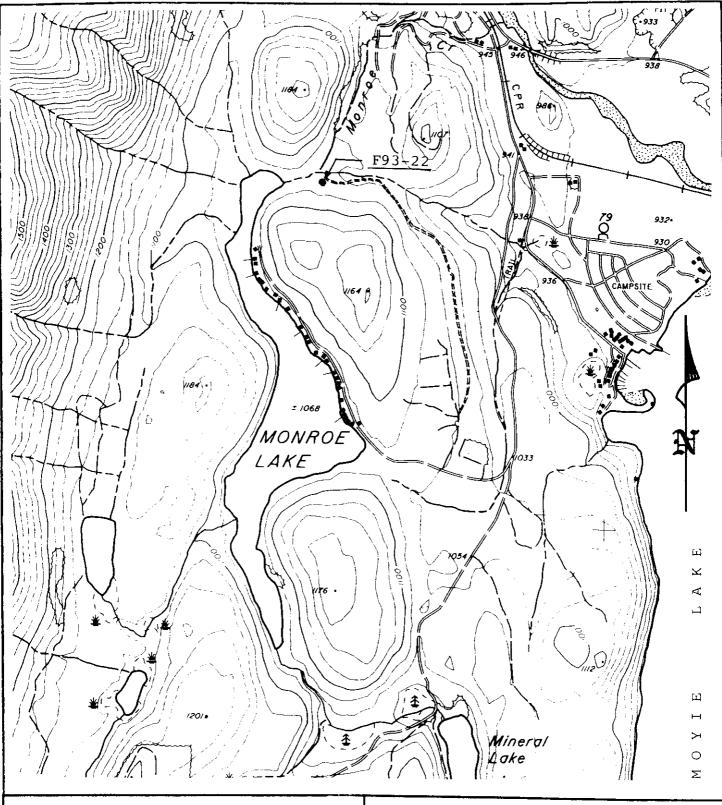

As author of this report I, Peter Klewchuk, certify that:

- 1. I am a geologist employed by Consolidated Ramrod Gold Corp. whose office is at 104 135 10th Ave. S., Cranbrook, B.C.
- 2. I am a graduate geologist with a BSc degree (1969) from the University of British Columbia and an MSc degree (1972) from the University of Calgary.
- 3. I am a Fellow in good standing of the Geological Association of Canada.
- 4. I have been actively involved in mining and exploration geology, primarily in the province of British Columbia, for the past 18 years.
- 5. I have been employed by major mining companies and provincial government geological departments.

Dated at Cranbrook, British Columbia, this November 1993.
