## **1.0 LOCATION AND ACCESS**

The Babs property is comprised of 19 mineral claims totalling 264 units located in the Omineca Mining Division on N.T.S. Map Sheet 93L/16E and 93K/13W. The property is located approximately 65 km northeast of Houston, in the Nechako Plateau physiographic region of west-central B.C. centred at 54° 51' North latitude and 126° 00' West longitude (Figure 1).

Access to the property is by well-maintained, paved road access north from the community of Topley, 30 km east of Houston on Highway 16, to the community of Michelle Bay on the west shore of Babine Lake. Barge service is available weekdays to Nose Bay located on the East shore of Babine Lake. From Nose Bay, well maintained logging road access to the property is provided by following the Nose Bay road to its junction with Pats road at Kilometer 6, approximately 3 km south along Pats road is the centre of the Babs property.

## **2.0 TOPOGRAPHY AND PHYSIOGRAPHY**

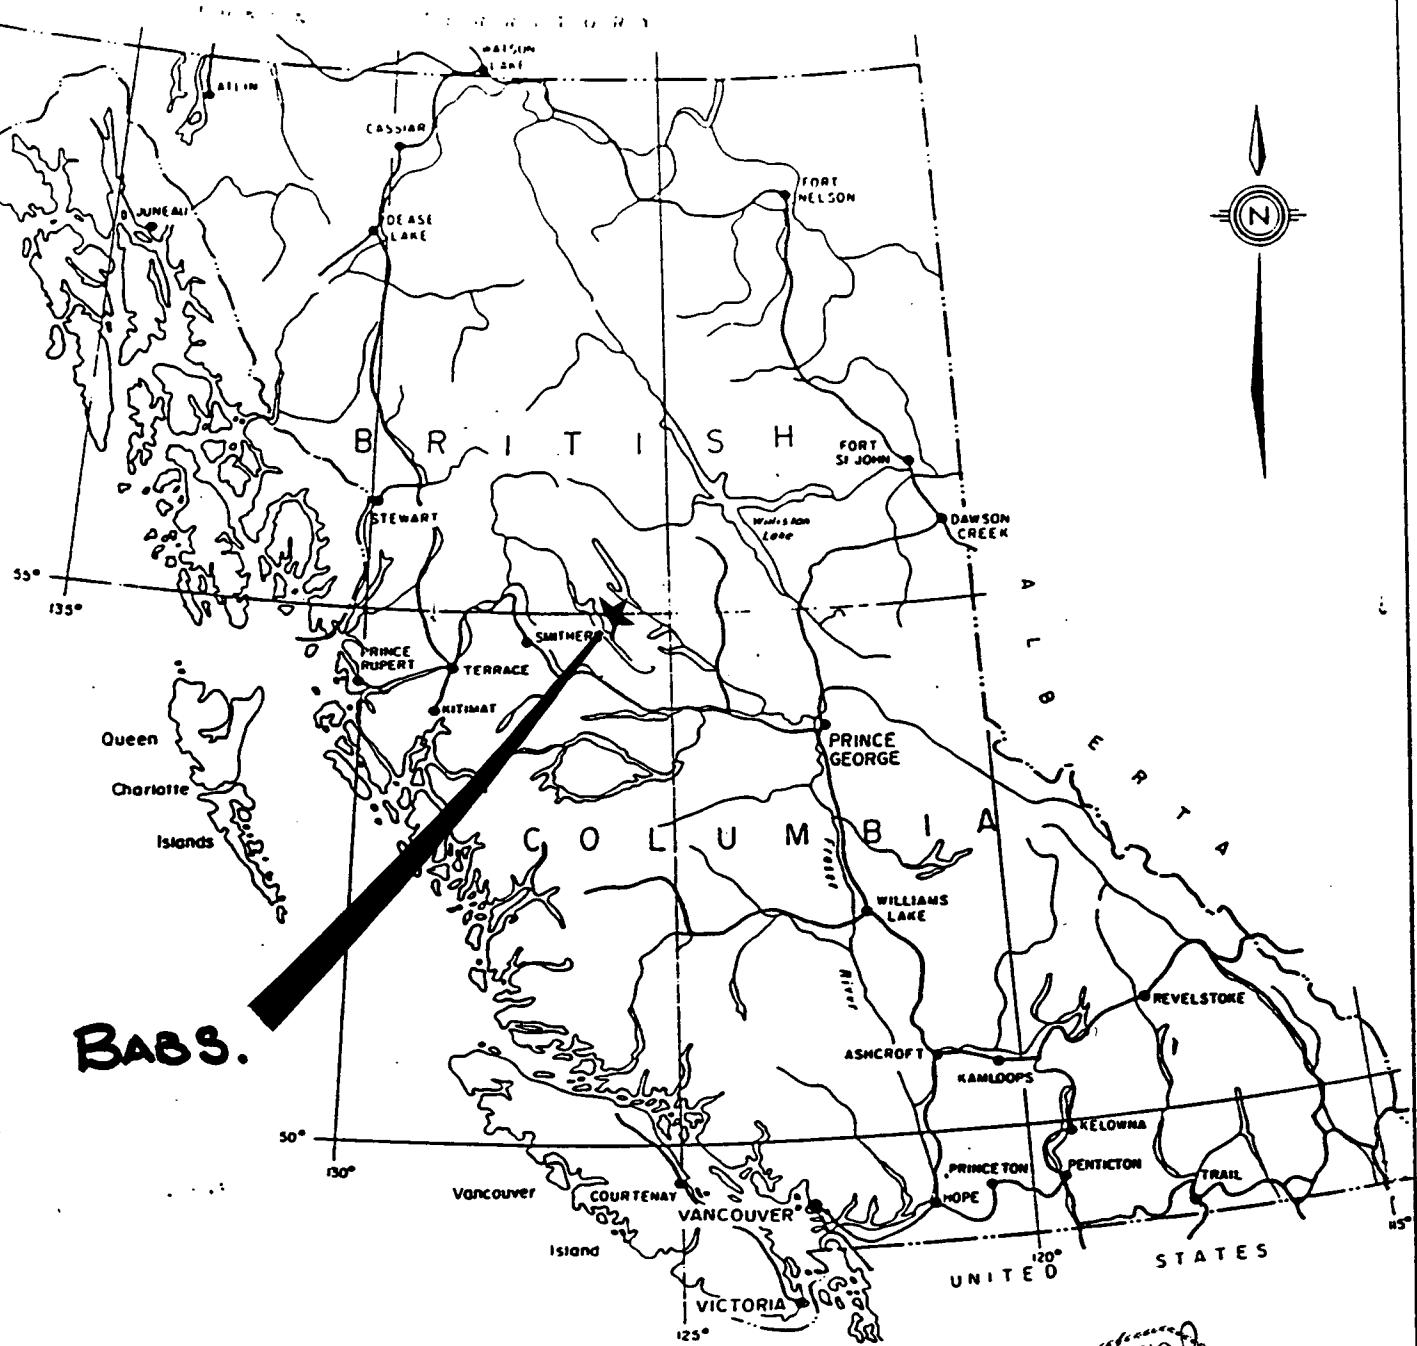

The Babs claim group covers gently rolling forested and clear cut terrain with elevations ranging from 712 m in the southwest to 1189 m to the northeast.

Outcrop is poorly exposed and masked by glacial till with best exposures along steep sided stream banks and ridge tops. Standing timber is dominated by mature spruce and some pine.

## **3.0 PREVIOUS WORK**

In 1991 a float train of large angular biotite feldspar porphyry boulders was discovered by prospector, Ralph Keefe, hosting chalcopyrite mineralization grading up to 0.9% Cu, 1.3 gm Au. The staking of 11 mineral claims late in 1991 covered the boulder train and surrounding ground which was subsequently optioned to Equity Silver Mines Limited in early 1992.

In 1992 Equity Silver Mines emplaced a grid over the boulder train and immediate area completing soil geochemical, magnetic, induced polarization surveys and geological mapping. Approximately 25 test pits were excavated of which two were reported to have reached bedrock. Between November 3, 1992 and November 7, 1992, 7 NQ diamond drill holes were completed to the east, west and south of the mineralized boulder train totalling 322 meters.

#### 4.0 OWNER-OPERATOR

The Babs 1-9 claims are currently held under option in the name of Noranda Exploration Company, Limited (No Personal Liability) and Noranda is the operator of the property (Figure 2).

The following is a list of claims comprising the Babs claim group.

CLAIM NAME	UNITS	RECORD NUMBER	EXPIRY DATE

#### 5.0 PROGRAM OBJECTIVES

Between the period of December 8 to December 16, 1993 Noranda Exploration and Britton Bros. Diamond Drilling of Smithers, B.C., completed a two-hole NQ drill program totalling 200.6 m.

Drill hole NB93-8 was designed to evaluate a zone of high chargeability/low magnetic response as defined by Equity Silver's 1992 field program in an area of anomalous copper soil geochemistry and centered at the southern limit of the mineralized B.F.P. float train. Based on the presence of visible chalcopyrite in the upper portion of NB93-8 a second drill hole was spotted 146 m to the northwest located central to the mineralized BFP float train.

Collar co-ordinate details are provided in Table 1. A plan map illustrating 1992-1993 drill collar locations, drill road access and distribution of copper-bearing float are compiled on Figure 3 with a drill hole cross-section provided on Figure 4. Drill logs are provided under Appendix I with assay results and sample descriptions attached under Appendix II.

TABLE 1

HOLE NO.	LOCATION NORTHING	LOCATION EASTING	AZIMUTH	ANGLE	END OF HOLE	DATE COLLARED	DATE COMPLETED

NB93-09	1+50N	L8+86W	-	-90°	100.3 m	12/11/93	12/12/93

#### 6.0 RESULTS AND CONCLUSIONS

Drill hole NB93-08 intersected steeply south dipping, phyllitic altered ash and lapilli tuff, rhyolite/feldspar porphyry and mafic (andesitic) intrusive dykes. Geochemical analysis returned anomalous and elevated Cu-Ag results over the upper 39.0 m with best results from 9.0 m to 19.4 m reporting 0.21% Cu.

Drill hole NB93-09 intersected similar stratigraphy to NB93-08, the alteration is less intense in the form of argillic to weak phyllitic alteration hosting <1% pyrite. Geochemical analysis returned locally anomalous results to 442 ppm Cu and elevated Au to 30 ppb from 71.3 m to 91.0 m.

The source of the biotite feldspar porphyry boulder float has not been located and therefore further work is required in the up-ice direction to the northwest. A program of soil geochemical magnetic and induced polarization surveys coupled with geological mapping/prospecting is recommended. Elevated and anomalous geochemical copper results returned from NB93-08 remains open and requires further drill testing to determine its extent.

CORE STORED AT BELL MINE SITE

Geologist: R. Kemp

FROM	TO	DESCRIPTION
0.0	9.1	CASING/OVERBURDEN
9.1	13.3	QUARTZ EYE TUFF Apple green color due to pervasive sericite alteration (Argillitic). Banding at 10.3 m + 45° to core axis. Quartz grains ~1 cm with affinity for hosting small grains of chalcopyrite(?) nucleated in centre. Chalcopyrite also occurs as small discrete grains/blebs or intermixed with pyrite - disseminated through matrix. Pyrite, pyrrhotite <1%, chalcopyrite ≤0.5%. Iron stain along fractures.
13.3	13.8	LAPILLI TUFF Polymictic angular to sub-angular fragments to 10 cm altered to white clay with darker aphanitic green clasts (devitrified volcanic glass?). Small isolated grains of chalcopyrite as noted above 9.1 - 13.3 m to ≤0.5% chalcopyrite, pyrite <1% disseminated sericite altered.
13.8	16.8	QUARTZ EYE TUFF Same as 9.1 - 13.3, sericite altered with chalcopyrite ≤0.5% disseminations as in 9.1 - 13.3, pyrite-pyrrhotite <0.5% disseminations. Contact at 13.8 m = 50° to core axis.
16.8	22.6	QUARTZ EYE TUFF/LAPILLI TUFF Intermixed zone - apple green color due to sericite alteration with iron stain along fractures. Chalcopyrite ≤0.5% disseminated pyrite-pyrrhotite 0.5%. Contact at 16.8 m = 55° to core axis. Foliated tuff at 22.3 m = 44° to core axis. Lapilli polymictic to 10 cm.
22.6	24.2	LAPILLI TUFF Polymictic angular to sub-angular with fine grained green strands (devitrified volcanic glass?). Chalcopyrite ≤0.5% disseminated pyrite-pyrrhotite <0.5%.

24.2	32.0	RHYOLITE/FELDSPAR PORPHYRY Fine grained, green (sericite altered). Small white phenocrysts faintly noted. Trace chalcopyrite disseminations. Pyrite-pyrrhotite <0.5% disseminated and fracture controlled.
32.0	35.7	LAPILLI TUFF Polymictic angular frags to sub-angular. Trace pyrite, pyrrhotite. At 52.0 m = 46° to core axis.
35.7	65.2	RHYOLITE/FELDSPAR PORPHYRY Sericite altered. Ghost-like, faint, white phenocrysts. Pyrite/pyrrhotite 0.5% disseminated and fracture controlled. Trace chalcopyrite mixed with pyrite in fractures. Fracture controlled sulphides at 53.5 m with possible arsenopyrite + pyrite + trace chalcopyrite.
65.2	73.3	LAPILLI TUFF Sericite altered polymictic fragments angular to sub-angular. Trace pyrite/pyrrhotite. Contact at 73.3 m = 53° to core axis.
73.3	80.2	RHYOLITE/FELDSPAR PORPHYRY Same as 35.7-65.2 m. Fracture controlled pyrite, pyrrhotite to <0.5%. Sericite altered.
80.2	82.5	LAPILLI TUFF Same as 65.2 - 73.3 m. Polymictic, sericite altered pyrite 0.5%. At 80.2 m contact at 55° to core axis. At 82.5 m contact at 55° to core axis.
82.5	85.5	MAFIC DYKE/ANDESITE DYKE Chilled contact, rare white phenocrysts. Lower contact at 70° to core axis. Non-magnetic.
85.5	96.1	LAPILLI TUFF/QUARTZ EYE TUFF Intermixed zone, sericite altered, trace disseminated pyrite.
96.1	100.3	RHYOLITE/FELDSPAR PORPHYRY Very fine grained, green, sericite altered with white phenocrysts. Trace of fine pyrite disseminations.
100.3		END OF HOLE

HOLE NUMBER: NB93-9

PROPERTY: BABS

Collar Co-ordinates: 1+50N, 8+86W

Geologist: R. Kemp

FROM	TO	DESCRIPTION
0.0	6.1	CASING/OVERBURDEN
6.1	40.1	LAPILLI TUFF Polymictic near clast supported fragments angular to sub-angular in shape. Rhyolitic fragments dominant with remaining being tuffaceous and feldspar phric. Fragments up to 12 cm, by 21.0 m sericite alteration comes in invading matrix and fragments. Pyrite-pyrrhotite disseminated to fracture controlled 1-2%.
40.1	82.1	RHYOLITE/FELDSPAR PORPHYRY Upper contact at 40.1 m @ 15° to core axis. 40.1-59.1 Rhyolite/Feldspar Porphyry White phenocrysts set in fine grained matrix - grey-green color due to sericite. Pyrite-pyrrhotite to 2% fracture controlled. 59.1-82.1 Brecciated Rhyolite/Feldspar Porphyry Pyrite, pyrrhotite. Fracture controlled to 2.5%. Sericite alteration.
82.1	83.8	LAPILLI TUFF Polymictic angular fragments to 3 cm - sericite altered. Pyrite/pyrrhotite 1% finely disseminated to fracture controlled.
83.8	86.9	RHYOLITE/FELDSPAR PORPHYRY Sericite altered. 1.5 to 2% pyrite/pyrrhotite, fracture controlled.
86.9	99.1	ASH/LAPILLI TUFF Swirled/contorted with sericite invading matrix. Trace to 0.5% disseminated pyrite.
99.1	100.3	MAFIC/ANDESITE DYKE Moderately magnetic, dark green color with white phenocrysts - chilled upper contact at 50° to core axis.

**APPENDIX III**  
**STATEMENT OF COSTS**

**NORANDA EXPLORATION COMPANY, LIMITED**  
**STATEMENT OF COSTS**

PROJECT: Babs (#178)

DATE: February 2, 1994

TYPE OF REPORT: Drilling

a) Wages:

No. of Mandays : 9 mandays  
Rate per Manday: \$355.00/manday  
Dates From : December 8 - 16, 1993  
Total Wages : 9 mandays x \$355.00/manday                    \$ 3,195.00

b) Food & Accommodations:

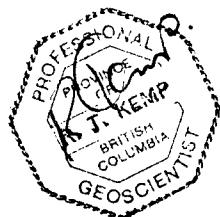

No. of Mandays : 9 mandays  
Rate per Manday: \$46.92/manday  
Dates From : December 8-16, 1993  
Total Costs : 9 mandays x \$46.92/manday                    \$ 422.24

c) Transportation:

No. of Mandays : 9 mandays  
Rate per Manday: \$77.86  
Dates From : December 8-16, 1993  
Total Costs : 9 mandays x \$77.86/manday                    \$ 700.71

d) Instrument Rental:

Type of Instrument:  
No. of Mandays :  
Rate per Manday:  
Dates From :  
Total Costs :

Type of Instrument:  
No. of Mandays :  
Rate per Manday:  
Dates From :  
Total Costs :

e)	<b>Analysis:</b> (See attached schedule)	\$ 1,245.00
f)	<b>Cost of preparation of Report:</b> Author : \$400.00 Drafting: \$300.00 Typing : \$300.00	\$ 1,000.00
g)	<b>Other:</b>  <b>Contractor:</b>  <b>Britton Bros. Diamond Drilling</b> (NB93-08 and NB93-09)  200.6 m x \$62.59/m	\$12,555.55
		<b>TOTAL COST</b>
h)	<b>Unit Costs for Drilling</b> No. of Meters : 200.6 m No. of Units : 19,118.50 Unit Costs : \$95.31/m Total Cost : \$19,118.50	\$19,118.50

**APPENDIX IV**  
**STATEMENT OF QUALIFICATIONS**

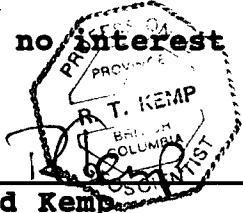

## STATEMENT OF QUALIFICATIONS

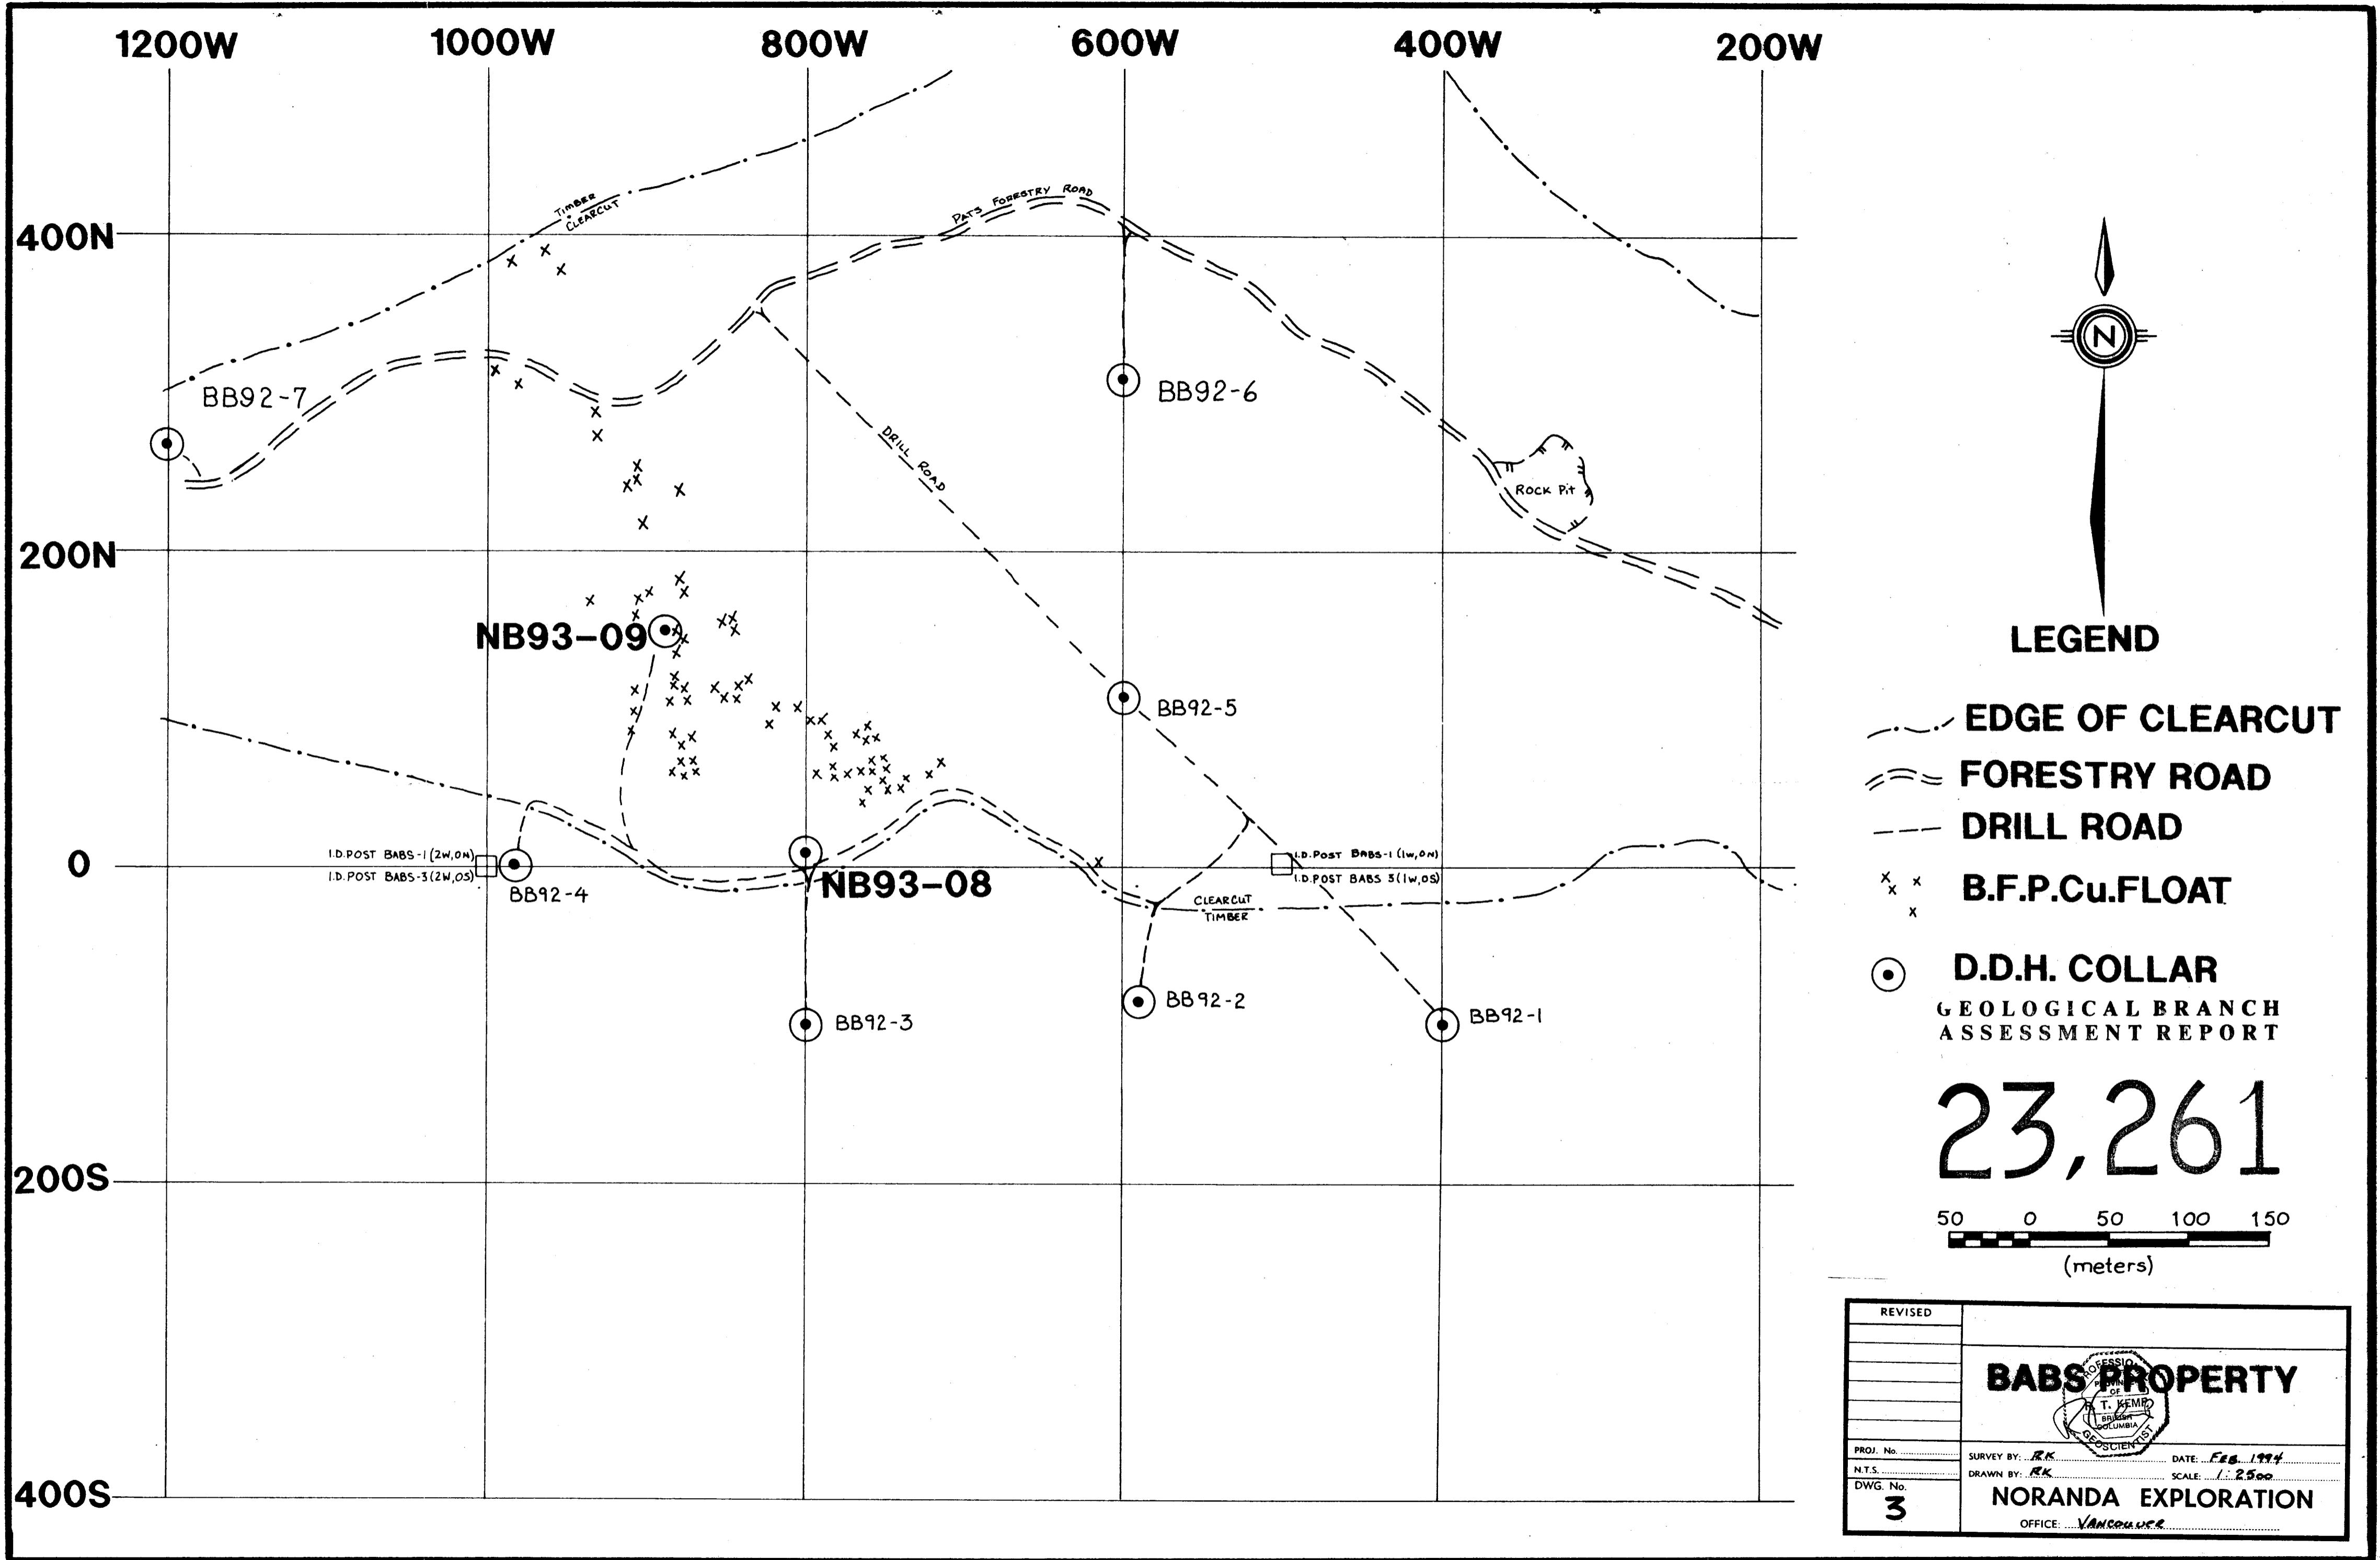

I, Richard Kemp, of the City of Vancouver, Province of British Columbia, do hereby certify that:

- 1) I am a geologist, residing at #111 - 2455 York Avenue, Vancouver, B.C.
- 2) I am a graduate of the Haileybury School of Mines (1974) Mining Technician Diploma and hold a B.Sc. Geology degree from Lakehead University (1981).
- 3) I have worked in mineral exploration in Canada and internationally since 1974 as a mining technician and since 1981 as a geologist.
- 4) The work described in this report was conducted under my supervision and I have prepared this report based on the field observations of those contracted by Noranda Exploration Company, Limited.
- 5) I have been continuously employed by Noranda Exploration Company, Limited since 1982.
- 6) I have no interest in the property nor do I expect to receive any.

---

Richard Kemp
