## SUMMARY

This forward to the Assessment Reports on the McMaster claim groups I and II briefly deals with the various facets of work carried out on surface and underground at the Ladner Creek Project between September 25, 1995 and June 15, 1996.

The work was carried out by various contractors and consulting groups, most of which are listed here.

A statement of costs is included to cover all work, with an equal breakdown between the two McMaster groups.

## LOCATION AND ACCESS

The McMaster claim groups I and II are situated approximately 17 kilometres northeast of Hope, B.C., and lie west of the Ladner Creek (Figure 1). The approximate centre of the claims is at latitude  $49^{\circ}32'$  and longitude  $121^{\circ}17'$  (Figure 2).

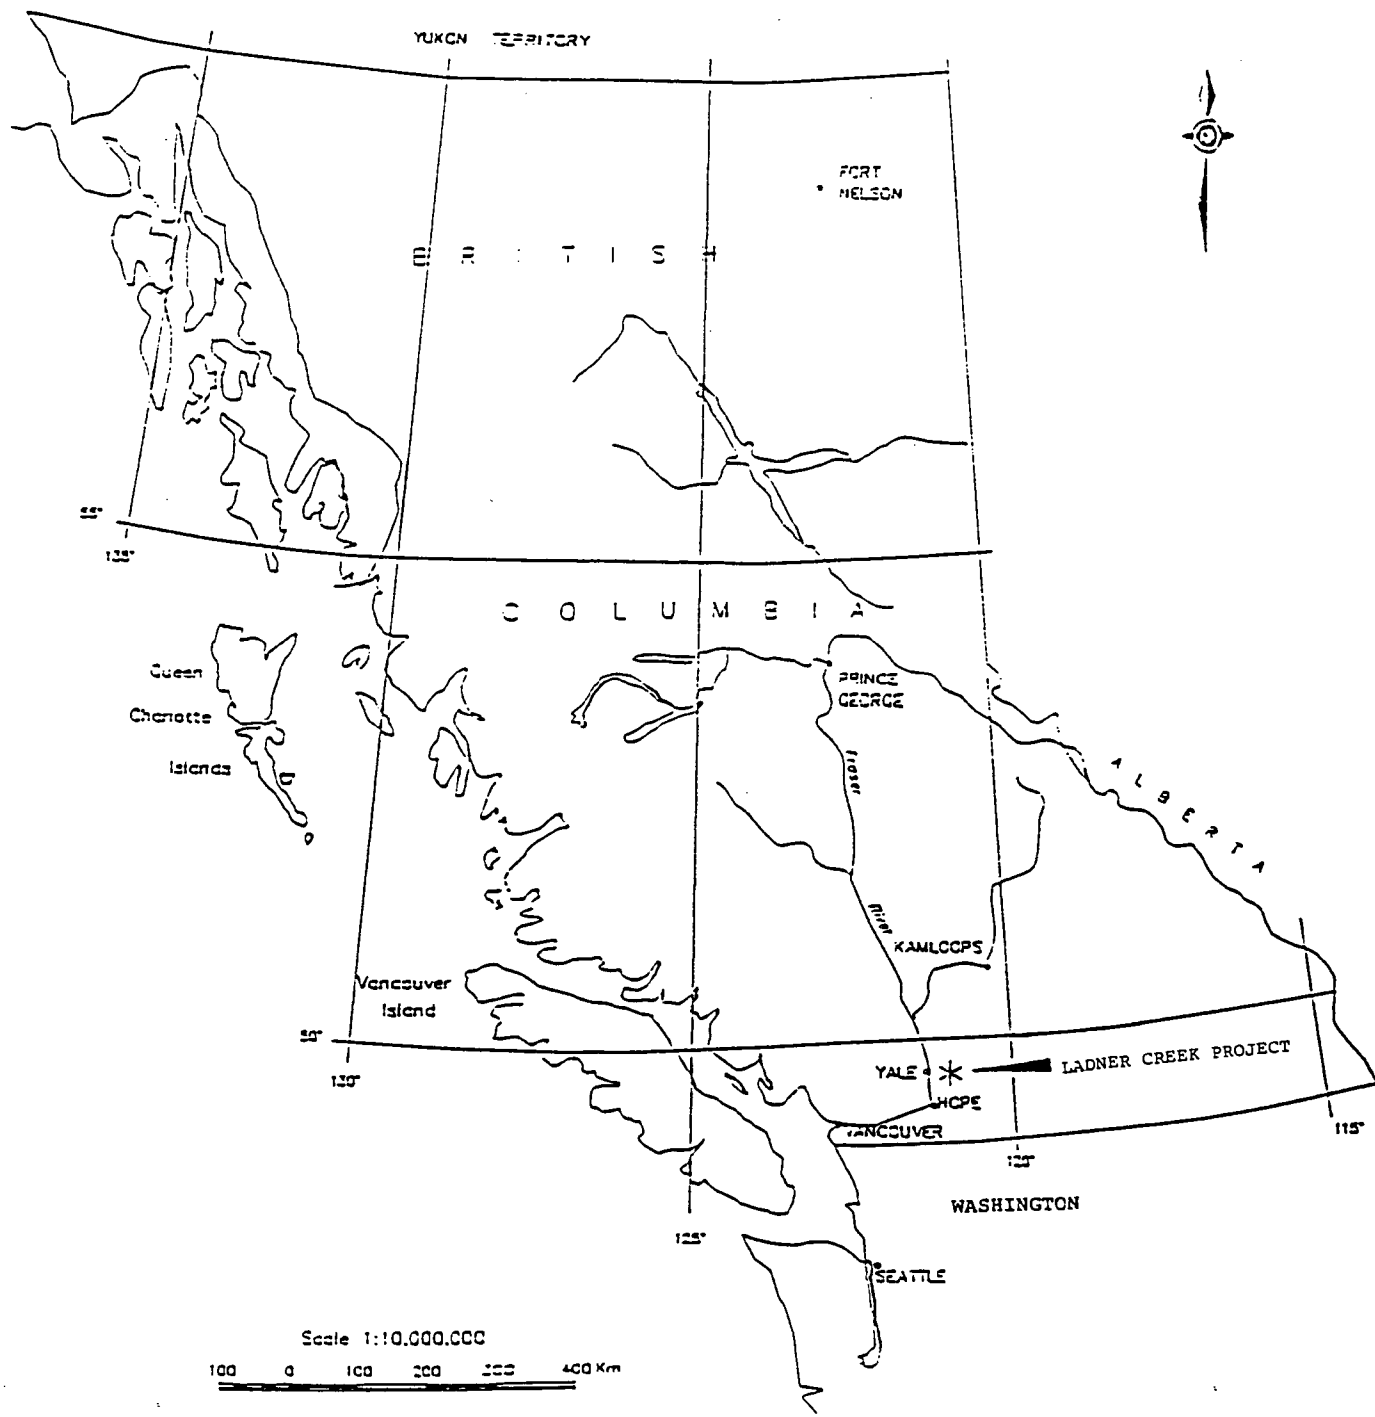

Elevation in the area ranges from 500 to 1530 metres. Access is from Hope via the Coquihalla Highway for 25 kilometres, then up the Ladner Creek Mine Road (old Carolin Mine road) for 6.2 kilometres to the Carolin mill site. Various roads take off from there to cover most of the property.

The southern part of the property (mainly crown grants) have been logged in the past. A section of the northern part of the property has been logged recently from the Siwash Creek connector.

## CLAIM STATUS

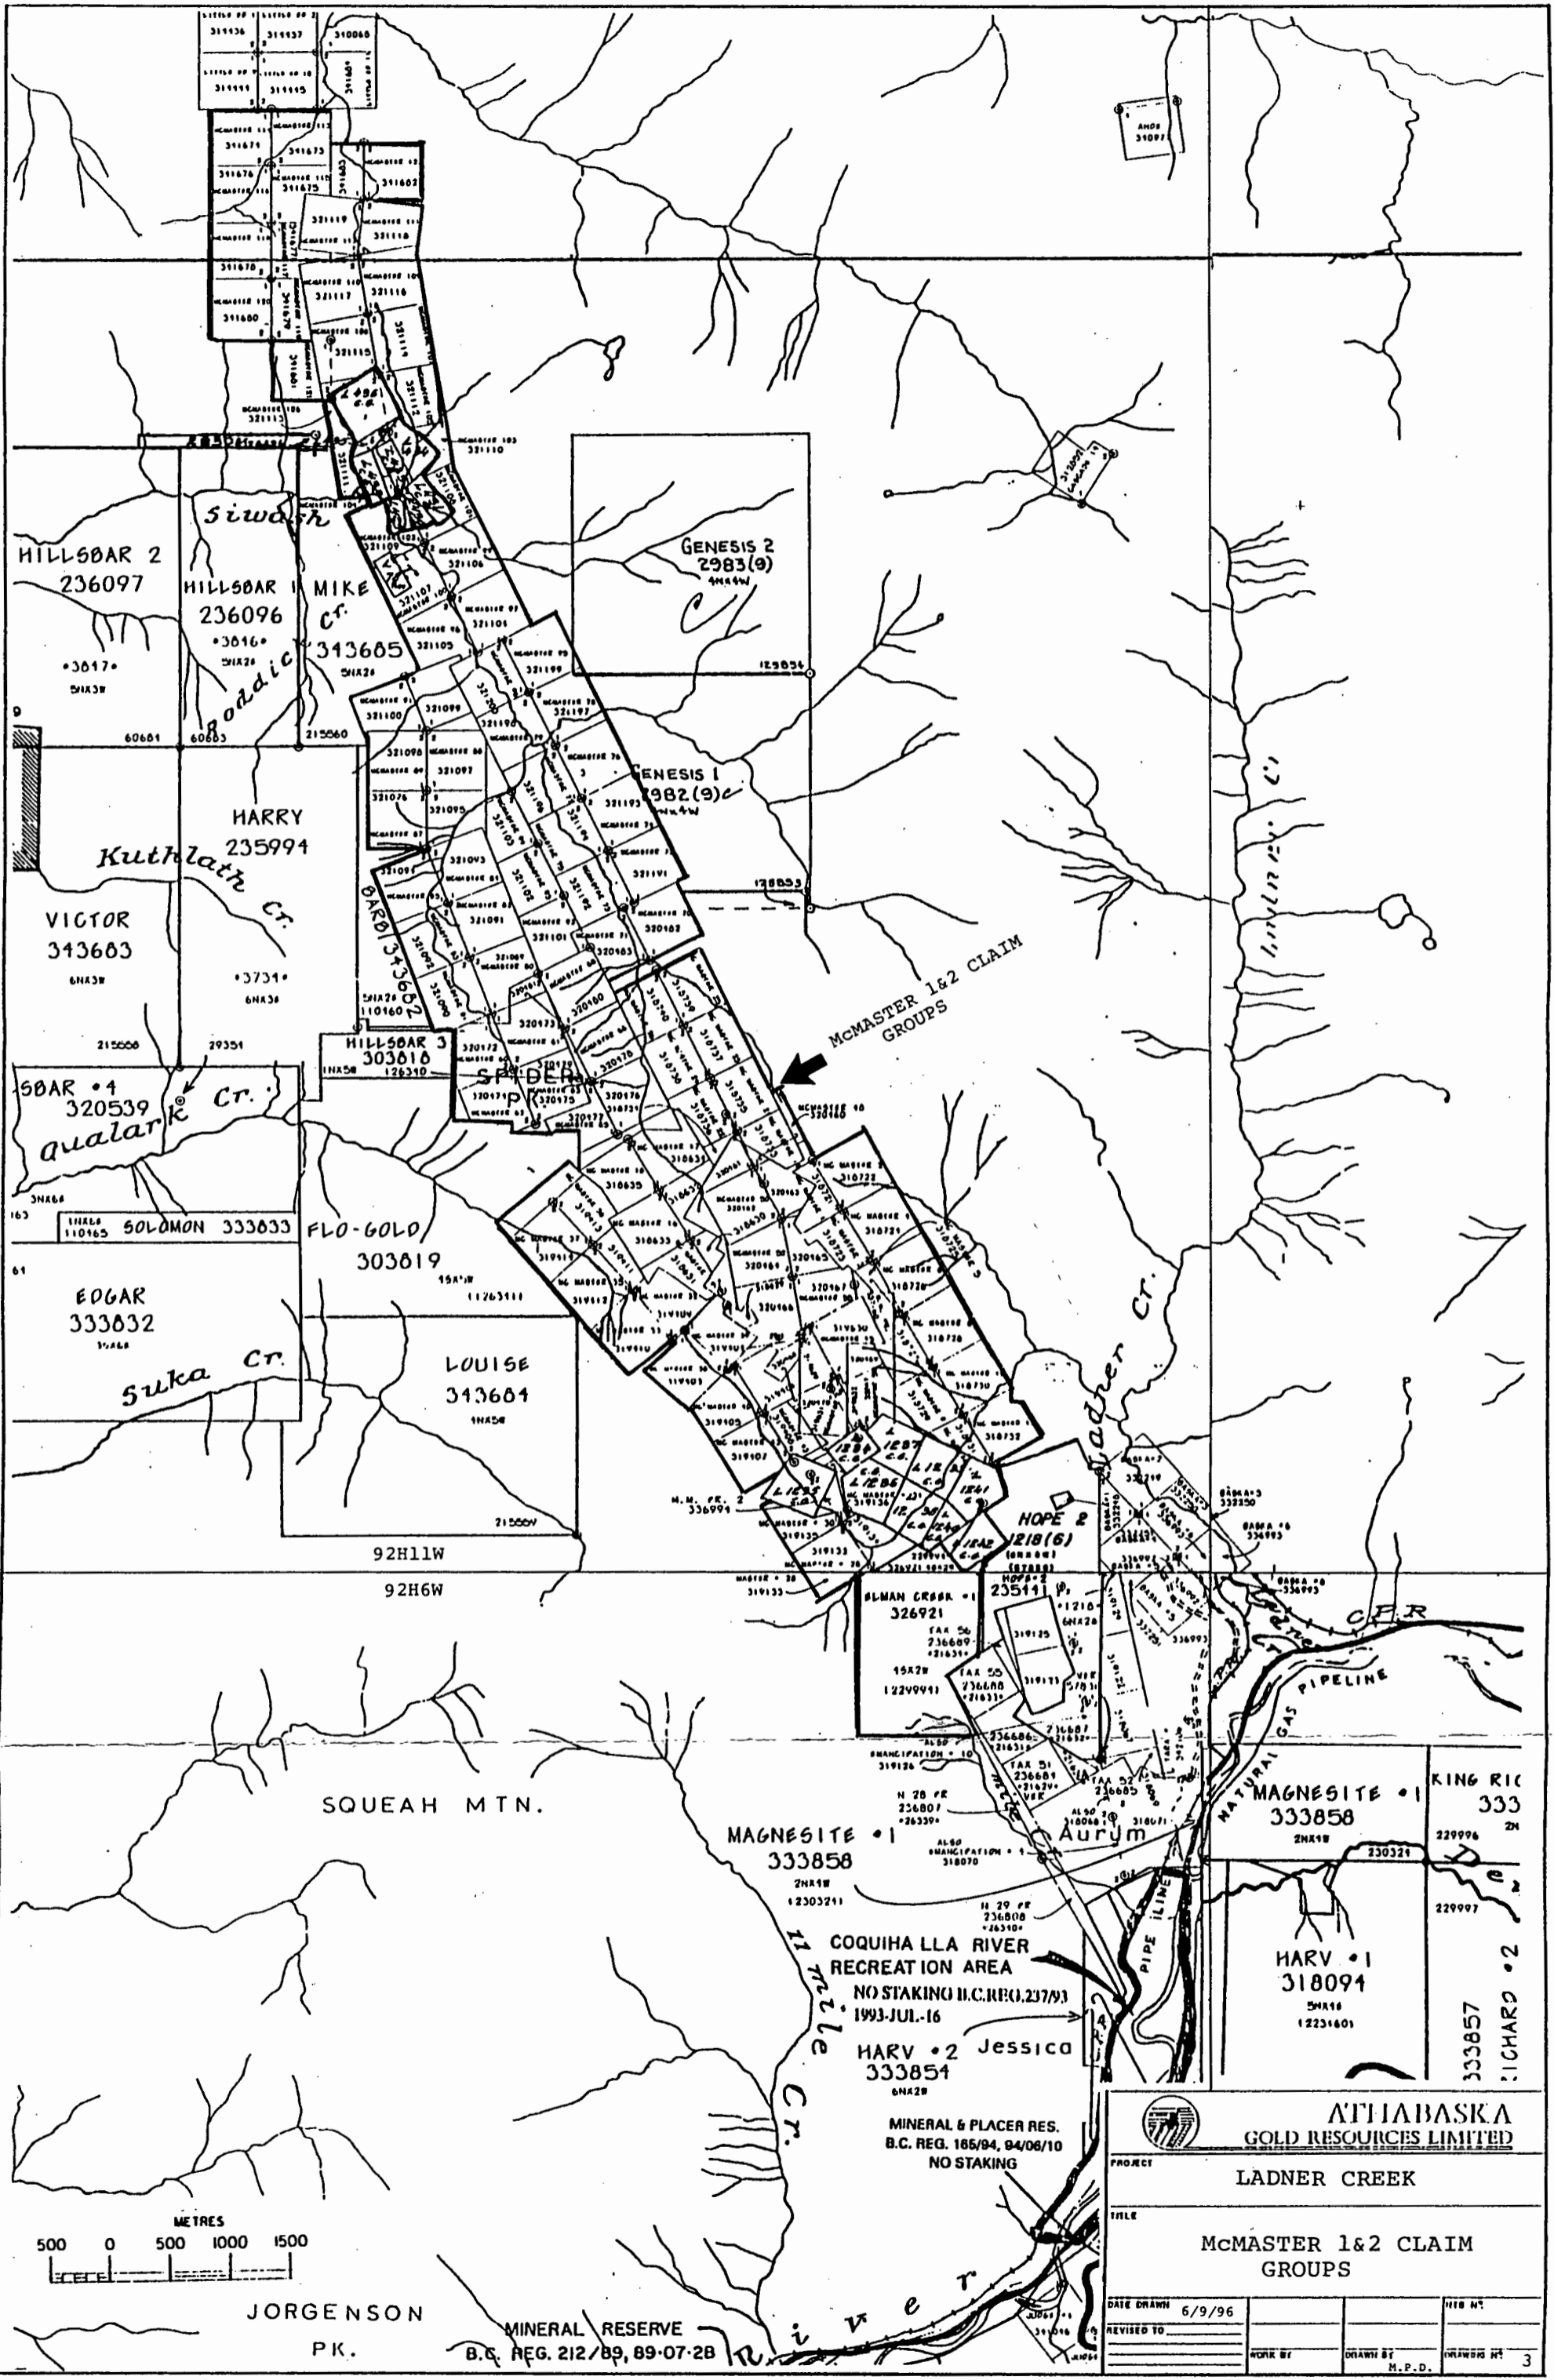

The McMaster claim groups I and II consist of McMaster 1 to 123, two post claims, McMaster 1 and 2 fractions, Elman Creek 1 (8 units) and 9 crown grants.

Table 1 contains a master claims list and grouping list for McMaster claim groups I and II, showing the recording dates and owners. Figures 3 and 4 show in plan view the two groups.

## HISTORY

Past exploration and production are dealt with extensively by J. Shearer and D. Cardinal in the appended reports. Considerable detail is also included in the above two reports on the program from September 25, 1995 to June 15, 1996.

Athabaska's objectives for the above period were:

- 1) Collect sufficient, unoxidized and representative material from underground to complete exhaustive metallurgical test work to arrive at an economically viable and environmentally sound milling process.
- 2) Drill the existing tailings on a representative basis for metallurgical and economic evaluation.
- 3) Drive approximately 280 metres of drift on the 875 level to permit diamond drilling of the northern projection of the Idaho Zone(s).
- 4) Diamond drill the Idaho Zone projection, further test the 3 Zone, and probe for other targets from the new drift and existing workings.
- 5) Further test the McMaster Zone with surface diamond drilling.
- 6) Prospect the northern parts of the property and the McMaster, Lorraine and Pipestem areas.
- 7) Enter all data on computer, printing out new sections and plans for study, guidance and ore reserve calculations.

## WORK PROGRAM

Athabaska's objectives resulted in the work programs that are documented in the appended reports. The program for objectives 1, 3, 4 and 7 is covered by the June 1, 1996 report by J.T. Shearer in Appendix I and the metallurgy for objective 1 by Mellis Engineering (September 21, 1995 to April 23, 1996) in Appendix III.

Ash and Associates in their reports of November 3, 1995 and January 15, 1996 cover the work programs for tailings (objective 2) and for drilling and sampling (Appendix 5) while Mellis Engineering reports cover the metallurgy studies on the tailings.

The report by Mr. D.G. Cardinal dated February 28, 1996 on McMaster and Lorraine Zones (Appendix II) covers the work program with regards to objectives 5 and 6.

In addition, the Golder and Associates report on the Tailings Dam Inspection dated October 27, 1995 (Appendix IV) gives an update of the tailings dam conditions.

The reader is referred to all of the above-mentioned reports for details of the various facets of the September 25, 1995 to June 15, 1996 program for the Ladner Creek Project.
