## SUMMARY

Big Valley Resources Inc. own the Calm 7 claim group consisting of Calm 1, 2, 3, 7 and 10 claims. These claims totalling 94 claim units are located 57 kilometres northeast of Williams Lake in the Cariboo Mining Division.

A 35 kilometre grid was established on the Calm 2 mineral claim. Grid lines are 100 metres apart and stations flagged every 50 metres. A total of 618 soil samples were collected on 50 metre centres. An additional 249 soil samples were collected on 25 metre centres on a number of fill-in lines established in the NE portion of the original grid.

Results of the geochemical sampling indicate a background value of 35 ppm for copper. Values greater than 200 ppm copper were one sample highs. Largest anomaly located in the SE corner of the grid borders on swampy ground. Mercury values to 1,040 ppb are very erratic, mainly one sample highs.

## INTRODUCTION

### i. Location, Access and Physiography

The Calm 7 group of claims are located 57 kilometres northeast of the city of Williams Lake in central British Columbia (Figure 1). The centre of the claims is at latitude 52° 35' north and longitude 121° 47' west in the Cariboo Mining Division.

The property is readily accessible from Williams Lake via 76 kilometres of paved highway on the Likely road. The paved highway passes through the centre of the Calm 2 mineral claim. Morehead Lake is located just east of the Calm 3 claim. A network of old logging roads provide good access to various parts of the claims.

The property lies in the Quesnel Highland physiographic region of the central British Columbia interior. This region is characterized by broad valleys and gently rolling hills with elevations on the property ranging from 1,006 metres (3,300 feet) to 1,220 metres (4,000 feet) above sea level.

The claims occur in a moist vegetative zone dominated by combinations of coniferous (cedar-pine-spruce-fir) and deciduous (birch-popular) forests with undergrowths of alder and devil's club.

### ii. Claim Status

The property consists of five mineral claims (94 mineral claim units) located in the Cariboo Mining Division. The mineral claims are shown on Figure 2 and details are as follows:

| Claim   | No. of Units | Record Number | Record Date    |
|---------|--------------|---------------|----------------|
| CALM 1  | 20           | 348154        | July 14, 1997  |
| CALM 2  | 20           | 348155        | July 15, 1997  |
| CALM 3  | 18           | 351826        | Oct 5, 1997    |
| CALM 7  | 18           | 355458        | April 24, 1998 |
| CALM 10 | 18           | 355461        | April 28, 1998 |

The claims are part of a large block of claims in the area registered to Big Valley Resources Inc.

### iii. Property History

Mining activity in the region has a long history starting with placer operations in 1890, which have continued with varying intensity to the present. From 1960 to the present time, the area has been the target of various exploration programs looking for porphyry copper-gold mineralization.

In 1964, the Cariboo Bell porphyry gold-copper deposit was discovered during exploration of a prominent aeromagnetic anomaly. Today, the Mount Polley deposit is owned by Imperial Metals Corp. and is scheduled to start production in 1997. It adjoins Big Valley Resources Inc. to the east and south.

In 1975, during the investigation of a similar aeromagnetic anomaly, Dome Mines Ltd. discovered the QR gold deposit. The QR deposit is presently in production and adjoins Big Valley Resources Inc. to the north.

## SEDIMENTARY AND VOLCANIC ROCKS

## INTRUSIVE ROCKS

|            |              |    |  |
|------------|--------------|----|--|
| TERTIARY   | PLEISTOCENE  | 11 | Glacial, fluvioglacial and fluvial gravel and sand   |
|            |              | 10 | Green, grey and maroon plateau basalt (alkali olivine basalt)  |
| CRETACEOUS | PLENSBACHIAN |    |  |
|            |              | 9  | Grey hornblende granodiorite and quartz monzonite  |
| JURASSIC   | SINEMURIAN   | 8  | Fine- to coarse-grained grey nepheline syenite; locally orbicular  |
|            |              | 6  | Cobble conglomerate: clasts of chert, limestone, sandstone; carbonaceous shale and sandstone                                       |
| CLASSIC    | PLENSBACHIAN | 5  | Well bedded dark grey siltstone and sandstone  |
|            |              | 7  | Grey and pink, medium fine grained monzonite, monzodiorite, synodiorite and syenite; pyroxene and/or hornblende-bearing            |
| TRIASSIC   | NORIAN       | 4  | Maroon, vesicular alkali olivine basalt, commonly analcite-rich  |
|            |              | 3C | Feldspathic tuffaceous siltstone and sandstone: minor breccia  |
| CARNIAN    | NORIAN       | 3B | Latic crystal tuff, tuff breccia and tuffaceous sandstone: minor latite flow breccia   |
|            |              | 3A | Maroon and grey polyolithic breccia; clasts of mafic and intermediate compositions in chloritic and feldspathic matrix             |
| CARNIAN    | NORIAN       | 2H | Coarse-grained greenish grey and brown sandstone, grey medium-grained sandstone and dark grey siltstone and argillite              |
|            |              | 2G | Massive grey limestone and calcareous sandstone  |
| CARNIAN    | NORIAN       | 2F | Interbedded dark grey mafic sandstone and siltstone  |
|            |              | 2E | Analcite-bearing maroon and greenish grey alkali basalt; feldspathic in places   |
| CARNIAN    | NORIAN       | 2D | Hornblende-bearing pyroxene basalt   |
|            |              | 2C | Polyolithic, grey and maroon mafic breccia; minor feldspathic clasts   |
| CARNIAN    | NORIAN       | 2B | Maroon, pyroxene-phryic alkali basalt  |
|            |              | 2A | Green and grey pyroxene-phryic alkali olivine basalt and alkali basalt   |
| CARNIAN    | NORIAN       | 1  | Dark grey siltstone, brown and grey sandstone; unit becomes volcaniclastic towards top. Minor conglomerate and dark grey limestone |

## GEOLOGY AND MINERALIZATION

Big Valley Resources property is located in a structural feature known as the Quesnel Trough, a 30 kilometre wide, north west trending, volcanic-sedimentary belt of regional extent of Early Mesozoic age. It is fault bounded on the west by Paleozoic rocks of the Cache Creek Group and on the east by older Paleozoic and Pre-Cambrian strata.

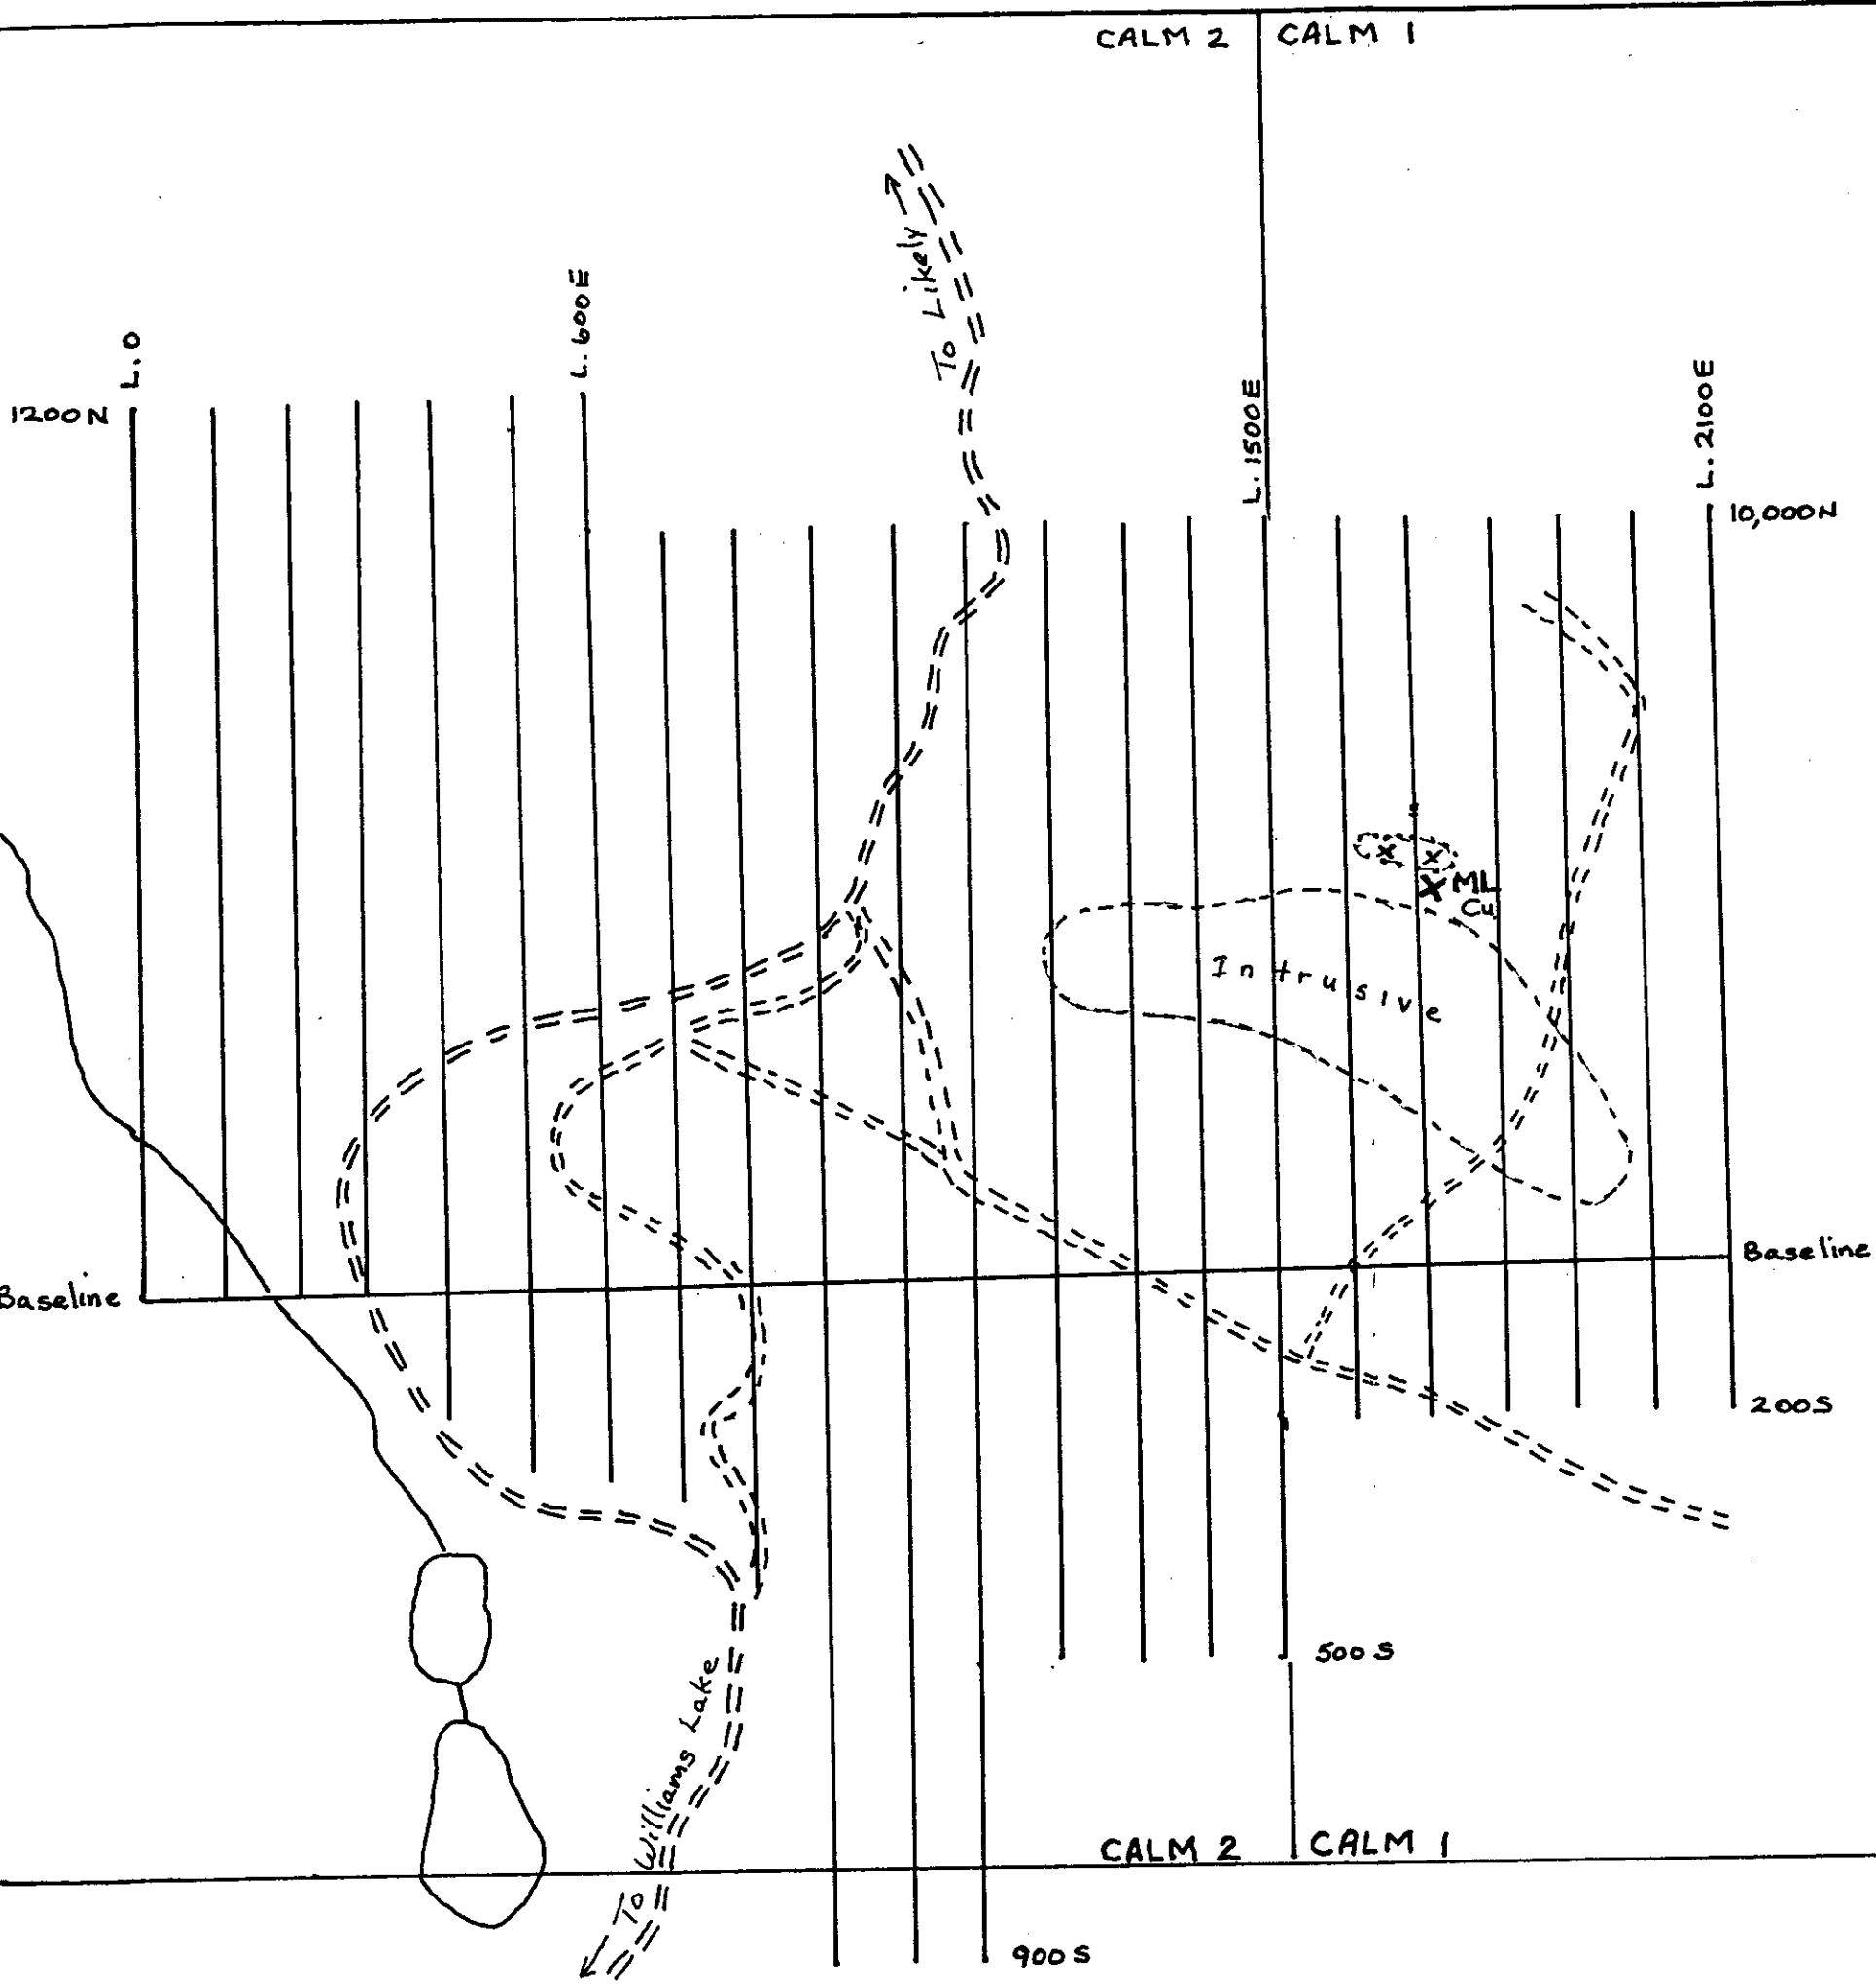

Locally within the Trough, intrusive rocks in part coeval to the volcanics occur on cross cutting structures. The Mount Polley intrusions, representing one such centre, are of interest for their potential of hosting porphyry copper/gold mineralization. The QR gold deposit is associated with a pyrite-epidote zone in basaltic breccia near an alkalic stock.

Regional geological mapping of the Quesnel Trough in the claims area is taken from work recently completed by Dr. D. Bailey for the British Columbia Department of Mines (Figure 3).

In the project area, a belt of mafic and felsic volcanic rocks, comagmatic alkaline stocks and dyke complexes make up the Quesnel Trough.

The area of the Calm 2 claim is underlain by mafic to felsic volcanics and sedimentary rocks of Upper Triassic to Lower Jurassic age. These rocks have been intruded by an alkalic stock of diorite to syenite composition, which is about 1.5 km by 1 km in size. The ML copper showings are located at the boundary between basalt breccia, sandstone and limestone, and Lower Jurassic poly lithological felsic breccia. Mineralization consists of chalcocite with maroon sandstone near the top of the Upper Triassic assemblage and as chalcopyrite and chalcocite within the limestone which marks the Triassic-Jurassic boundary. Sporadic occurrences of copper mineralization occur over an area approximately 1 km square.

Two magnetic high anomalies are located close to the intrusive body. One is located on the Calm 3 claim near its southern boundary immediately west of the Likely Highway. The other lies in the central part of the Calm 2 claim immediately west of the Likely highway.

## GEOCHEMICAL PROGRAM

During May 15 to July 12, a north-south oriented grid was established on the Calm 2 mineral claim. A total of 32 kilometres of grid line was blazed and flagged. Lines 100 metres apart were chained and 50 metre sampling stations numbered. A total of 618 soil samples were collected at 50 metre intervals. Later six 500 metre long fill-in lines were established in the north-eastern part of the grid and an additional 249 samples were collected on 25 metre spacings.

Soil samples were collected from the B-horizon at a depth of 20 – 25 centimetres. Colour of the soil varied from orange-brown to brown. Soil samples were collected and stored in Kraft paper packets and labelled according to the grid co-ordinates. All samples were dried at ambient temperatures, then shipped to Eco-Tech Labs in Kamloops and Min-En Labs in Vancouver for analysis. Min-En Labs analyzed 188 samples and Eco-Tech analyzed 679 samples. A 28 element ICP analysis was obtained for all samples and 430 samples were analysed for Hg.

All copper and mercury values are plotted on grid maps located in Appendix I of this report.

Results of the geochemical sampling indicate a background value of 35 ppm copper. Eleven of the samples assayed greater than 200 ppm copper, however, they were all one sample highs. The largest anomaly, located in the SE corner of the grid, borders on swampy ground and additional sampling was not feasible.

Mercury values to 1,040 ppb are erratic and show as one sample highs. Overburden cover could be masking the geochemistry as it is highly variable in depth and generally very extensive.

## **CONCLUSIONS AND RECOMMENDATIONS**

The Calm 7 group of claims are located in a geologically favourable area of the Quesnel Trough. The QR gold deposit is located just north of the claims and the Mt. Polley copper-gold deposit is located east of the claims. The exploration target is a porphyry copper-gold deposit with high magnetite content located in alkaline intrusives and/or altered rocks in the vicinity of the intrusions.

Geochemical soil sampling was carried out on the Calm 2 mineral claim. The grid was oriented north-south with 100 metre line spacing and 50 metre sample spacing. A total of 867 soil samples were collected.

Results of the soil sampling indicate a background value of 35 ppm for copper. Values greater than 200 ppm copper were one sample highs.

Despite the general lack of well established anomalies, it is recommended that a series of test pits and short trenches be dug to bedrock in and around the intrusive on the Calm 2 claim. The ML copper showing along with a number of other copper showings indicate that the area has potential for hosting economic mineralization.

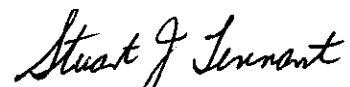

## STATEMENT OF COSTS

|   |                    |
|---|--------------------|
| Locating and surveying grid (9 km)              | \$4,550            |
| 26 man days @ \$175/day                         |                    |
| (13 days J. Street – May 18 – June 2)           |                    |
| (7 days K. Tattersall – May 25 – June 2)        |                    |
| (6 days A. Tattersall – May 18 – May 24)        |                    |
| Soil sampling                                   |                    |
| 30 man days @ \$175/day                         | 5,250              |
| (15 days T. Tattersall - June 15 – 30)          |                    |
| (15 days G. Franks - June 15 – 30)              |                    |
| Assaying 867 soil samples @ \$16.00/sample      | 13,872             |
| Freight to Kamloops and Vancouver               | 200                |
| Field supplies (flagging, geochem pkts., etc.)  | 300                |

## AUTHOR'S QUALIFICATIONS

I, STUART J. TENNANT, do hereby certify that:

1. I am a geologist residing at 600 Garrow Drive, Port Moody, British Columbia, V3H 1H5.
2. I am a 1959 graduate of the University of British Columbia with a Bachelor of Science degree in geology.
3. I have practiced my profession in exploration since 1959, primarily in British Columbia.
4. Since May 1996, I have been employed as an exploration geologist with Big Valley Resources Inc.
5. I personally supervised and participated in the field work and have compiled, reviewed and assessed the data resulting from the work.

STUART J. TENNANT

DATED at Vancouver, British Columbia, this 8 day of October, 1997.
