1 INTRODUCTION

This report describes the work carried out on the Kukutt & Kikutka mineral claims situated in the Alberni Mining Division carried out in 1998.

2 LOCATION AND ACCESS

The claims are located approximately 3 km southeast of the eastern tip of the Muchalat lake and approximately 1 km up the Cypress Creek from the lakes' main bridge that crosses Cypress Creek. Access is by a good logging road.

3 HISTORY

The writer does not know of any work carried out in this area prior to his work. The writer, Norex, and Westmin carried out work to the west. Umex and others did some work near Upana Lake.

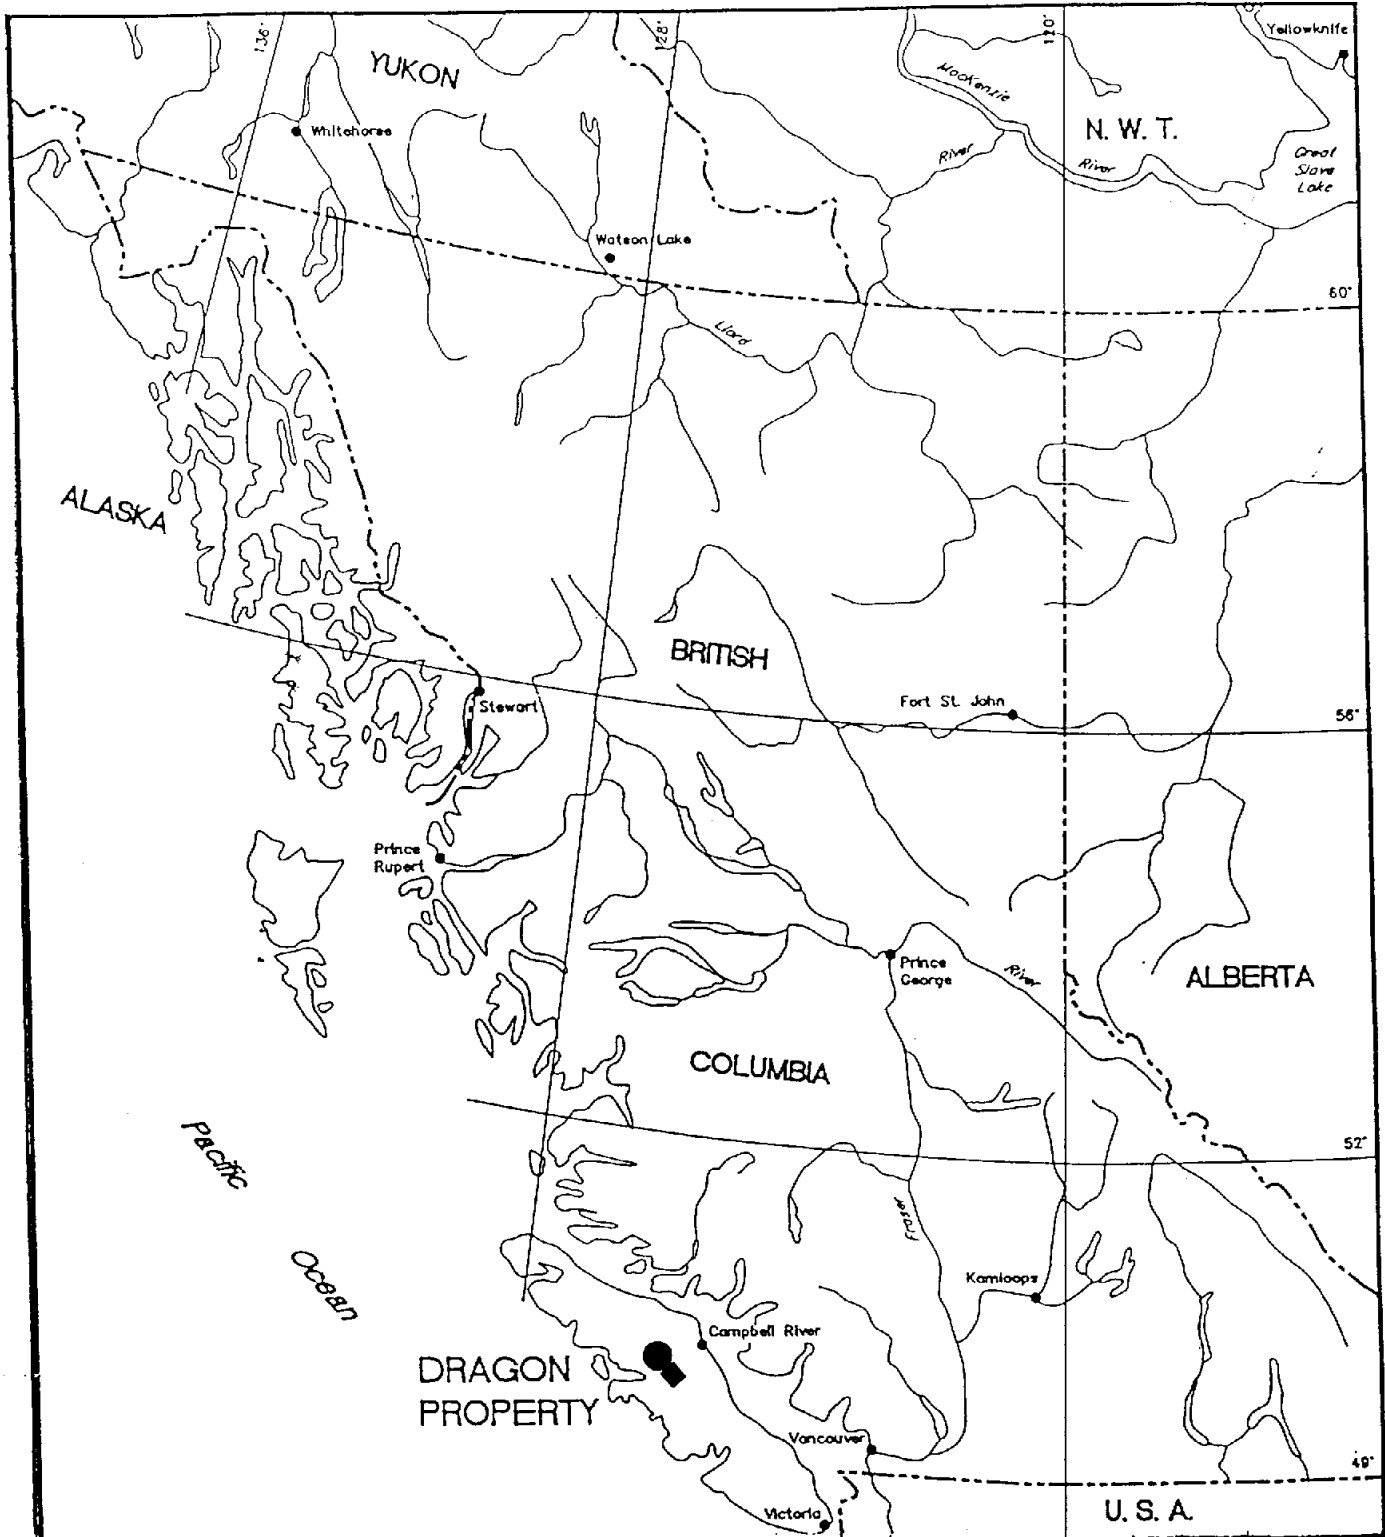

4 WORK

Rocks in the area were studied and some silt was collected to determine what to expect at a higher elevation. One copper stain in a rock bluff is visible by binoculars from 1.5 Km away. Float and in place rock samples were collected and analyzed for Au., Pt., Pd., and multi elements ICP.

5 GEOLOGY

The area covered by the Kikutka Tenure has been mapped as island intrusion. In fact, Kikutka Tenure covers a small fraction of composite plutons with associated mafic, ultra mafic, M.L.I. with mantle bearing spinels, layered magnetite and siker rocks. This geology has not yet been identified by geoscientists.

9 RESULTS

Float samples returned good results. The in place samples are not as good. However, the in place samples are encouraging and more work is needed at lower water levels as the Cypress Creek is very narrow and deep. This creek also carries large quantities of water except during the dry season.

13 DESCRIPTION OF SAMPLES

All rock samples are 2 meters wide, or as otherwise stated.

- 481.84 Pyritized Basic & Silicious Intrusive - First Outcrop on westside of Cypress Creek.
- 481.85 Pyritized Float.
- 481.88 Heavy Pyritized Basic Ultra Basic - on eastside of Cypress Creek.
- 481.89 As above.
- 481.90 Pyritized Epidoteveinlets.
- 481.91 Pyritized Epidoteveinlets and Quartz Veinlets.
- 481.92 Pyritized Random Samples.
- 481.93 Random 4 meters below 88-89.
- 481.94 20 meters east of 88-89.
- 480.95 Ultra Basic Floats with Muscovite - 95 reacts as crimson red on application of Dimethyl-Gloxime, 96-97 not as much.
- 480.96 Ultra Basic Floats with Muscovite.
- 480.97 Ultra Basic Floats with Muscovite.
- 480.98 Heavily Pyritized Garnet or Rhodonite.
- 483.94 From large boulder or Muscovite Lamprophyre.

Large, poikilitic grains of amphibole are seen to be up to several cm's in size. They incorporate or engulf grains of plagioclase and pyroxene that are in the 0.5 - 1.0 mm size range. Some large crystals of plagioclase are also present and these appear to be corroded. The rock has been altered in an interstitial to intergranular manner with the development of secondary amphiboles, chlorite and sulfides.

The rock is some sort of basic to ultrabasic megacryst bearing lamprophyre.
