LOCATION AND ACCESS

The property is located approximately 140 kilometers northwest of Prince George and 78 kilometers west of Windy Point, B.C. The Leah Marie claim is centered on 55° 07' north latitude and 123° 51' west longitude on NTS sheet 93 O/4. It is accessible by the north branch of the Finlay Philip Forest Service Road at kilometer 60 from spring to fall or by helicopter from Mackenzie year-round.

TOPOGRAPHY AND VEGETATION

The topography of the area is rolling hills ranging in elevation from 980 meters (2990 ft.) above sea level (ASL) to 1250 meters (3800 ft.) ASL covered with economic stands spruce and fir and poplar trees. The best exposure of bedrock is usually found in logging cuts and along road cuts.

PROPERTY STATUS

The property consists of one 4 - post mineral claims.

CLAIM NAME	RECORD NO.	UNITS	EXPIRY DATE	OWNER
Leah Marie	363605	20	June 28, 2000	D. Forshaw

HISTORY

The property is located east of Placer Dome's Mt. Milligan copper/gold porphyry deposit. It was originally staked by D.L.Cooke and Associates Ltd. to cover part of a small aeromagnetic anomaly which occurs approximately 4.5 kilometers east of the Mt. Milligan copper-gold deposit. Reconnaissance induced polarization and resistivity survey, geological mapping, rock and soil sampling were done over the western part of the property in August of 1991.

A single drill hole tested part of the magnetic anomaly and is reported to have encountered pyritic black argillites (R. Shives, pers. comm.).

In 1991 the Geological Survey of Canada (GSC) conducted a high resolution airborne gamma ray spectrometric (AGRS) survey over the Mt. Milligan area (Shives et al, 1991). This survey delineated potassic halo "bulls-eyes" over the Mt. Milligan, Taylor, Wit, Chuchi, and other known deposits and identified several new targets, one of which lies mostly under the Lac 1 claim. The anomaly under the Lac 1 claim is known as the "K5".

The Lac 1 and 2 claims were allowed to lapse in 1994 and the Lac 1 claim was restaked by D. Forshaw, who optioned the claim to Pacific Mariner Explorations Ltd. which was renamed Abitibi Mining Corp. in 1995. Under Pacific Mariner the property was explored by soil sampling over the heart of the main AGRS potassic anomaly, sampling that mostly duplicated D.L.Cooke's earlier work. The results returned were somewhat better than Cooke's, defining a weak northeast trending copper anomaly along a topographic lineament.

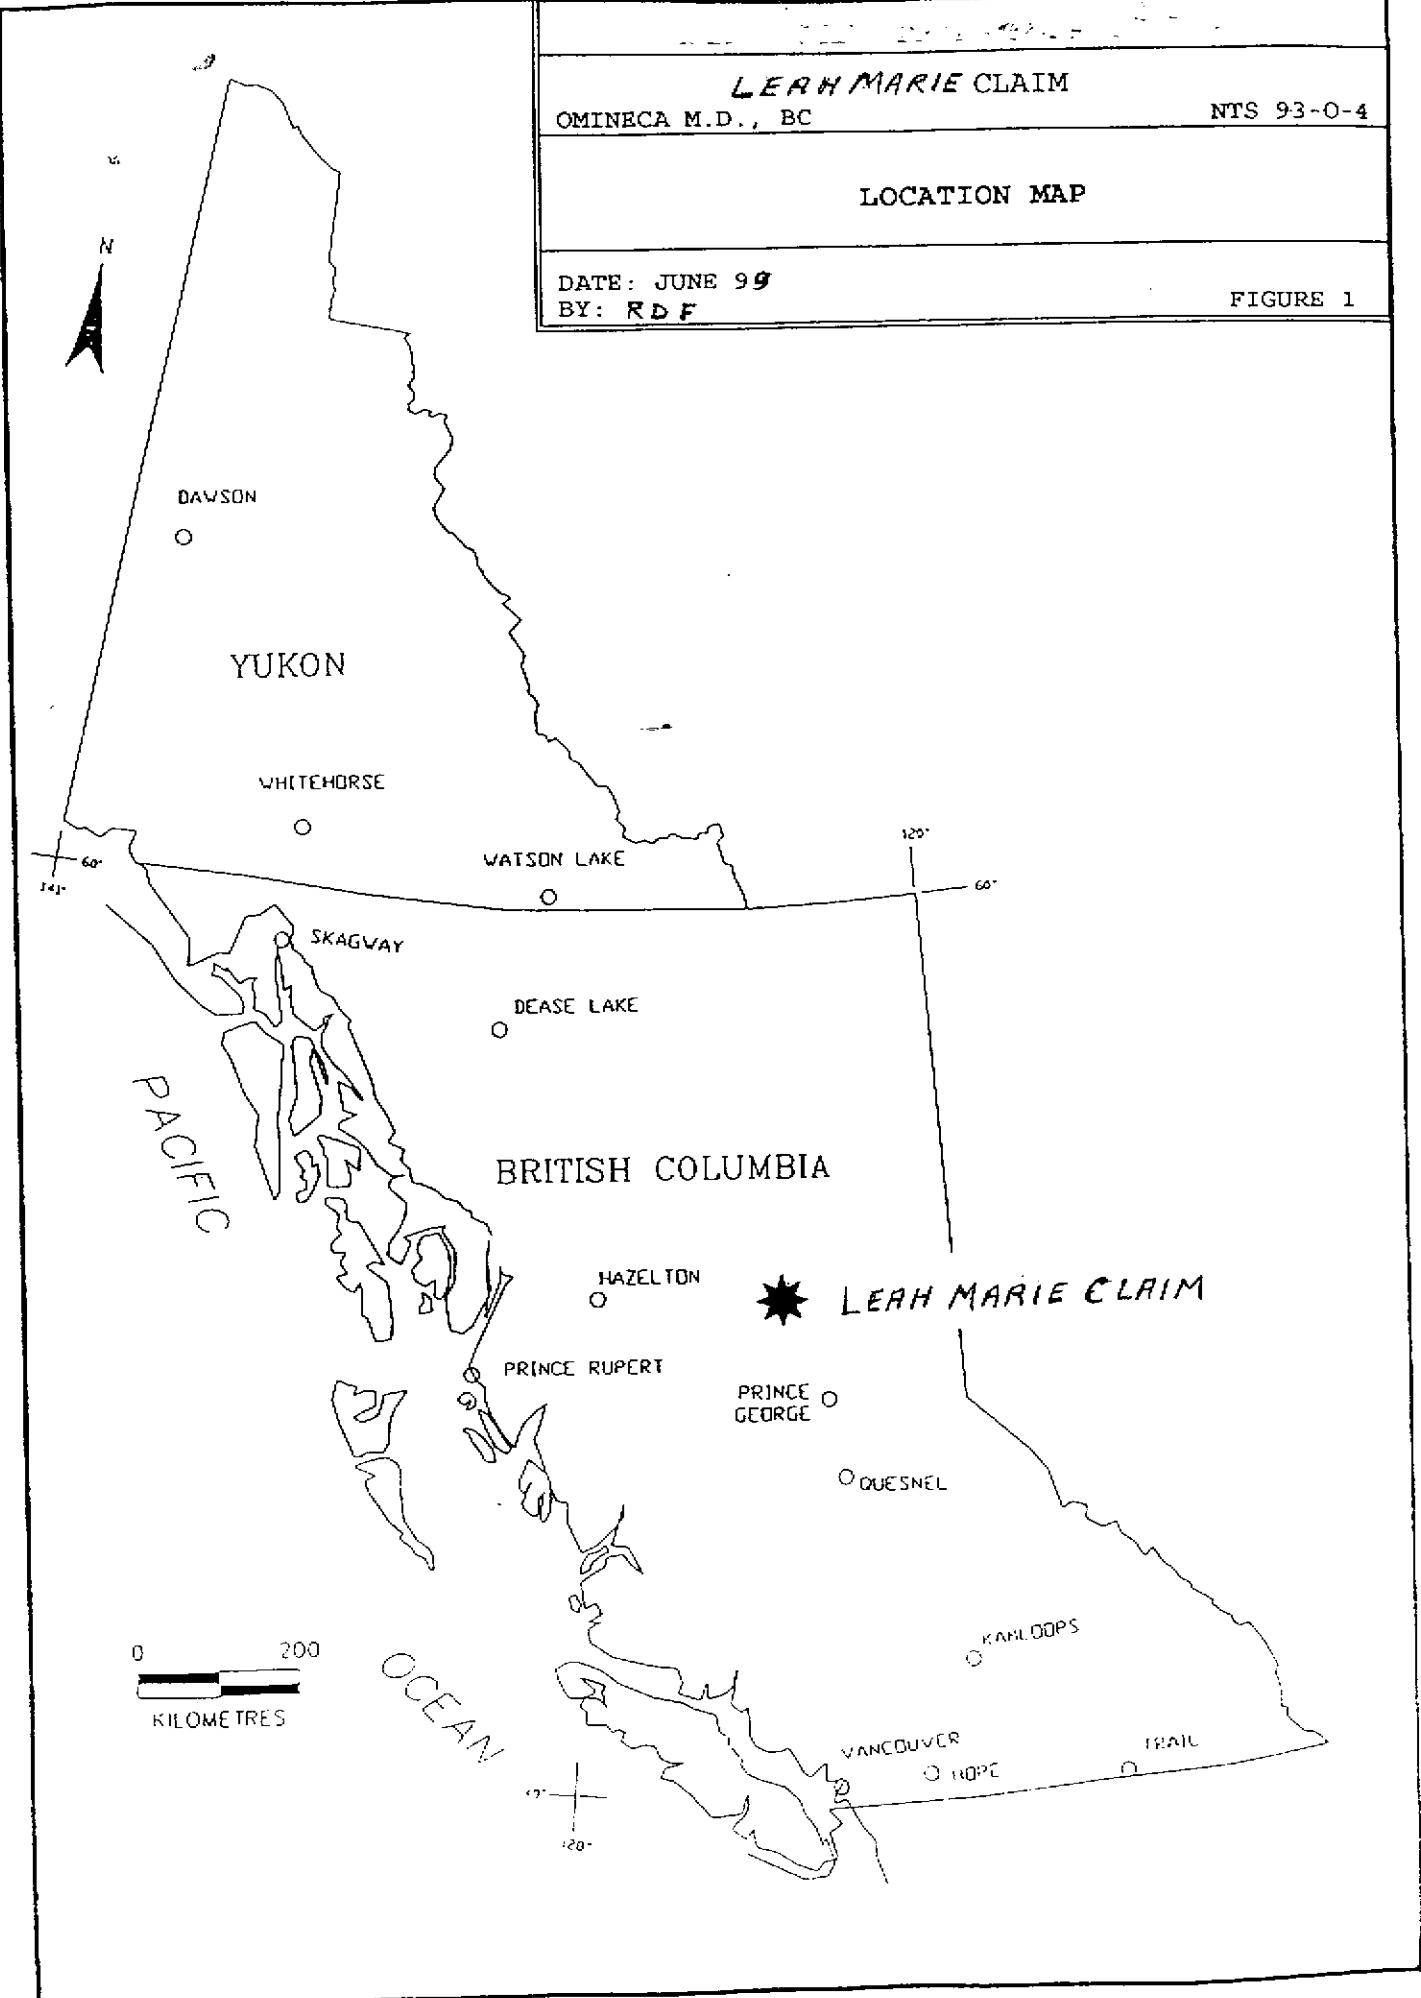

Abitibi Mining Corp. dropped the Lac 1 claim. In 1998, the property was restaked by D. Forshaw who renamed it the Leah Marie. A ground survey, on the west side of the property, was done using a 256 channel gamma ray spectrometer. This was done in order to get more specific information to determine the exact boundaries of the anomaly. Forty-four readings were done on a 100m x 75m grid.

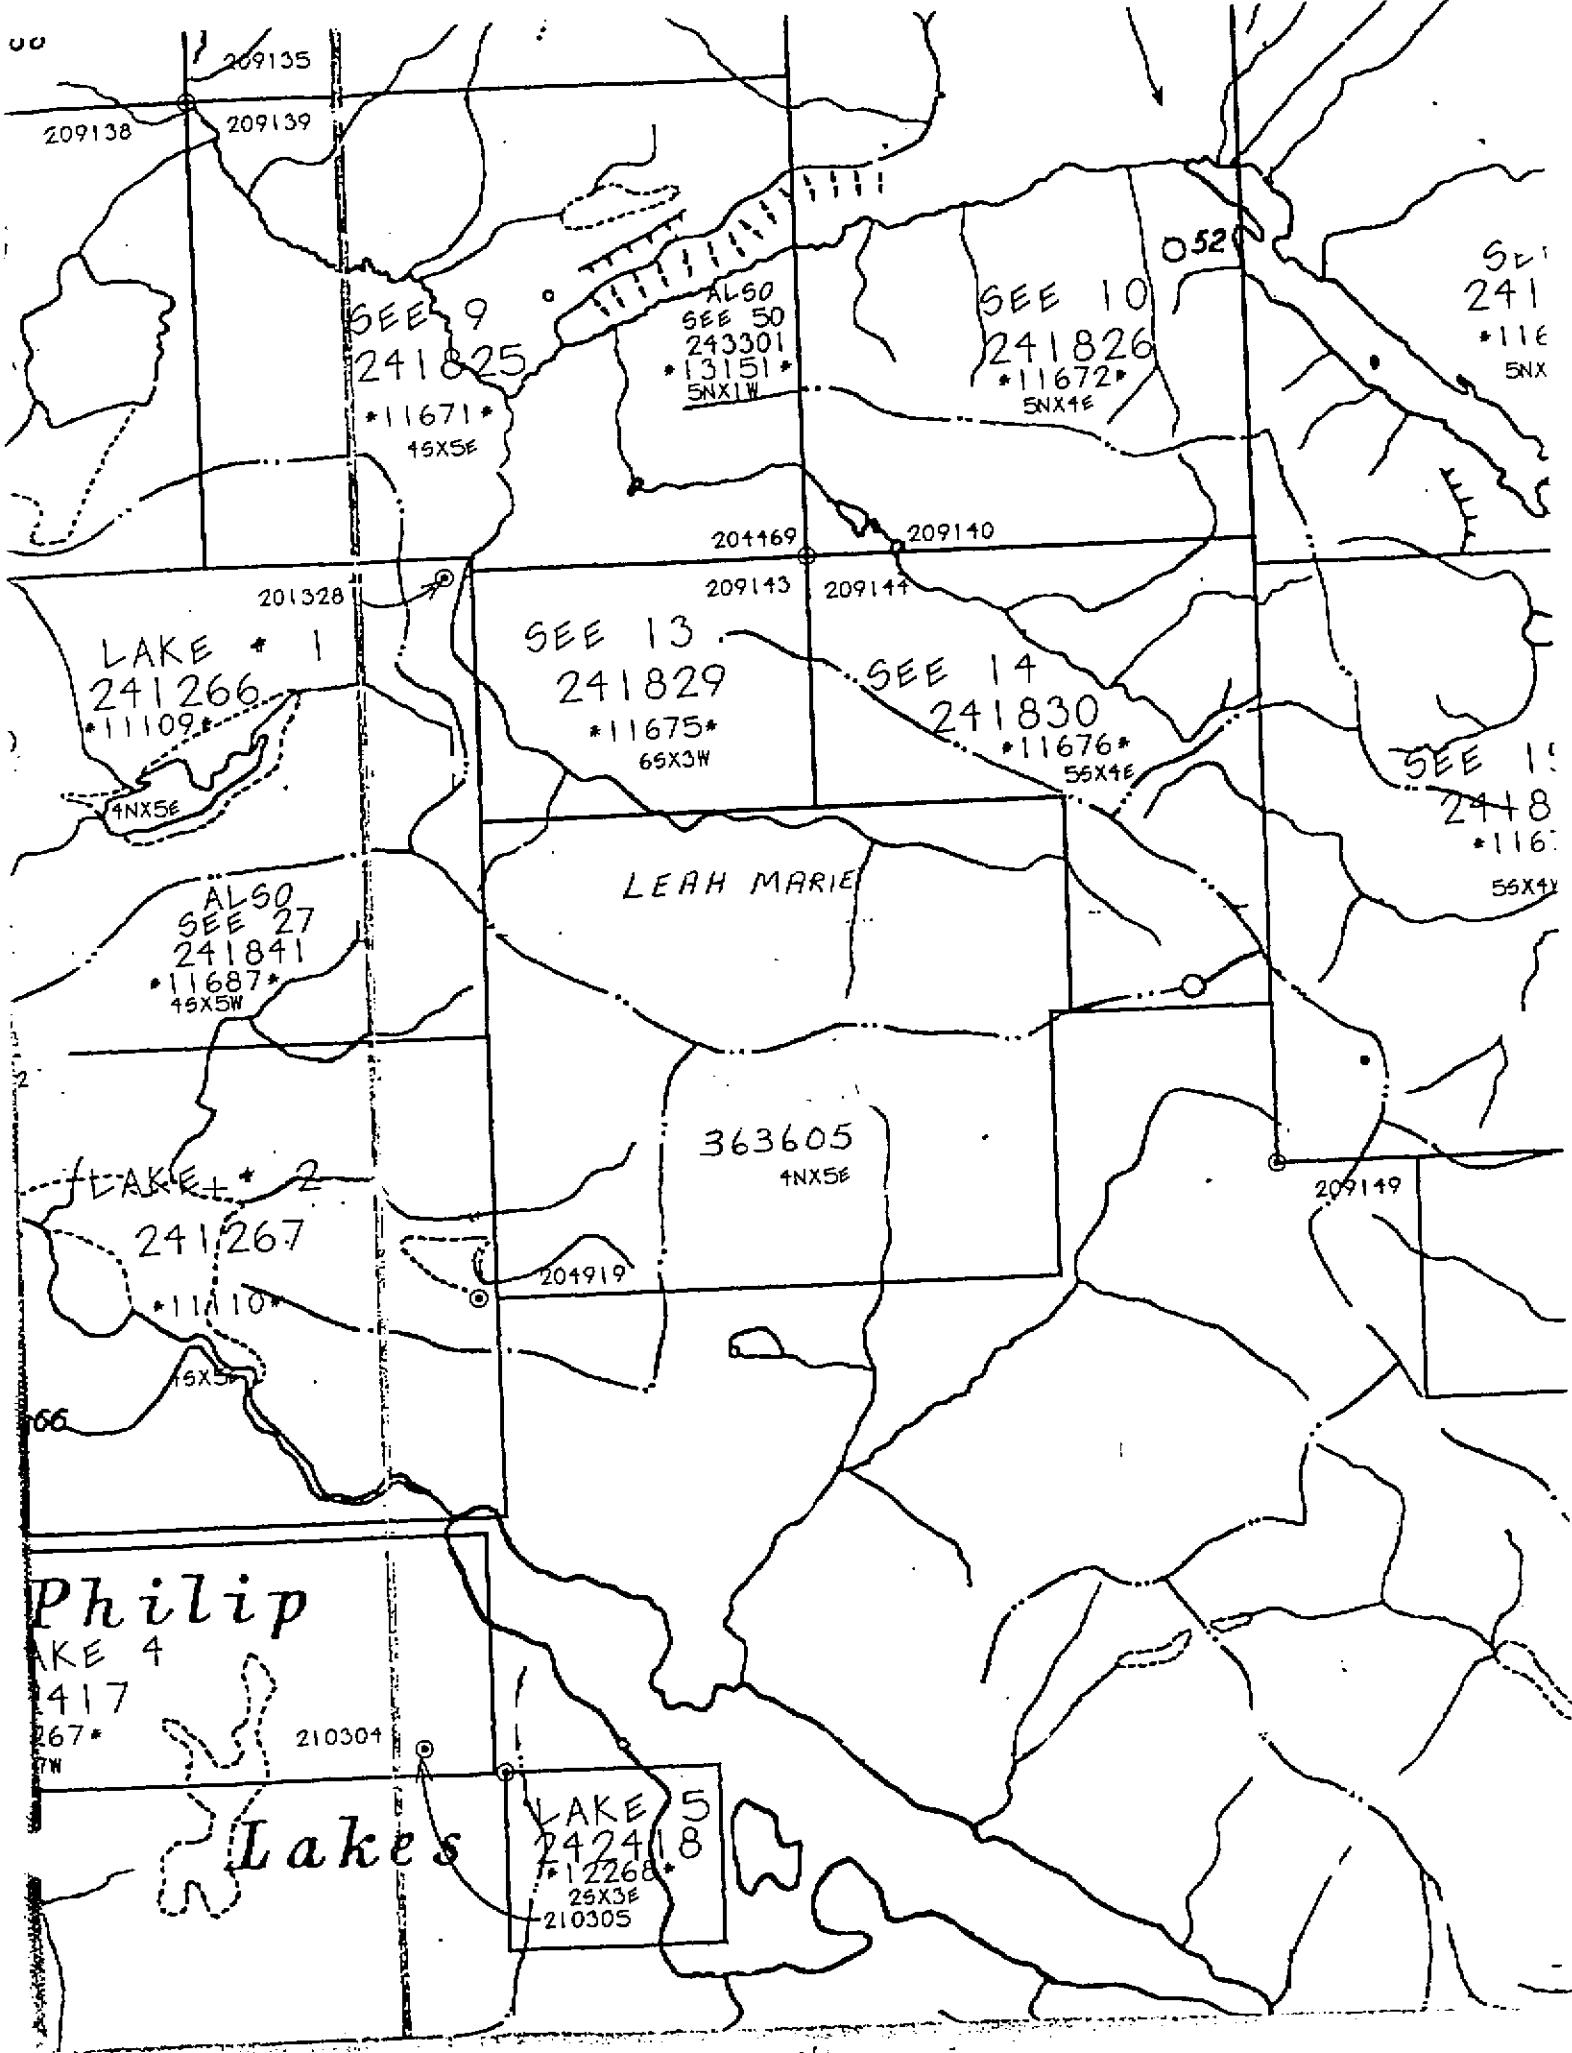

In 1999, a continuation of the ground survey was attempted, the grid was laid , and readings were taken, but due to equipment failure the readings were inaccurate and we were unable to continue the survey.

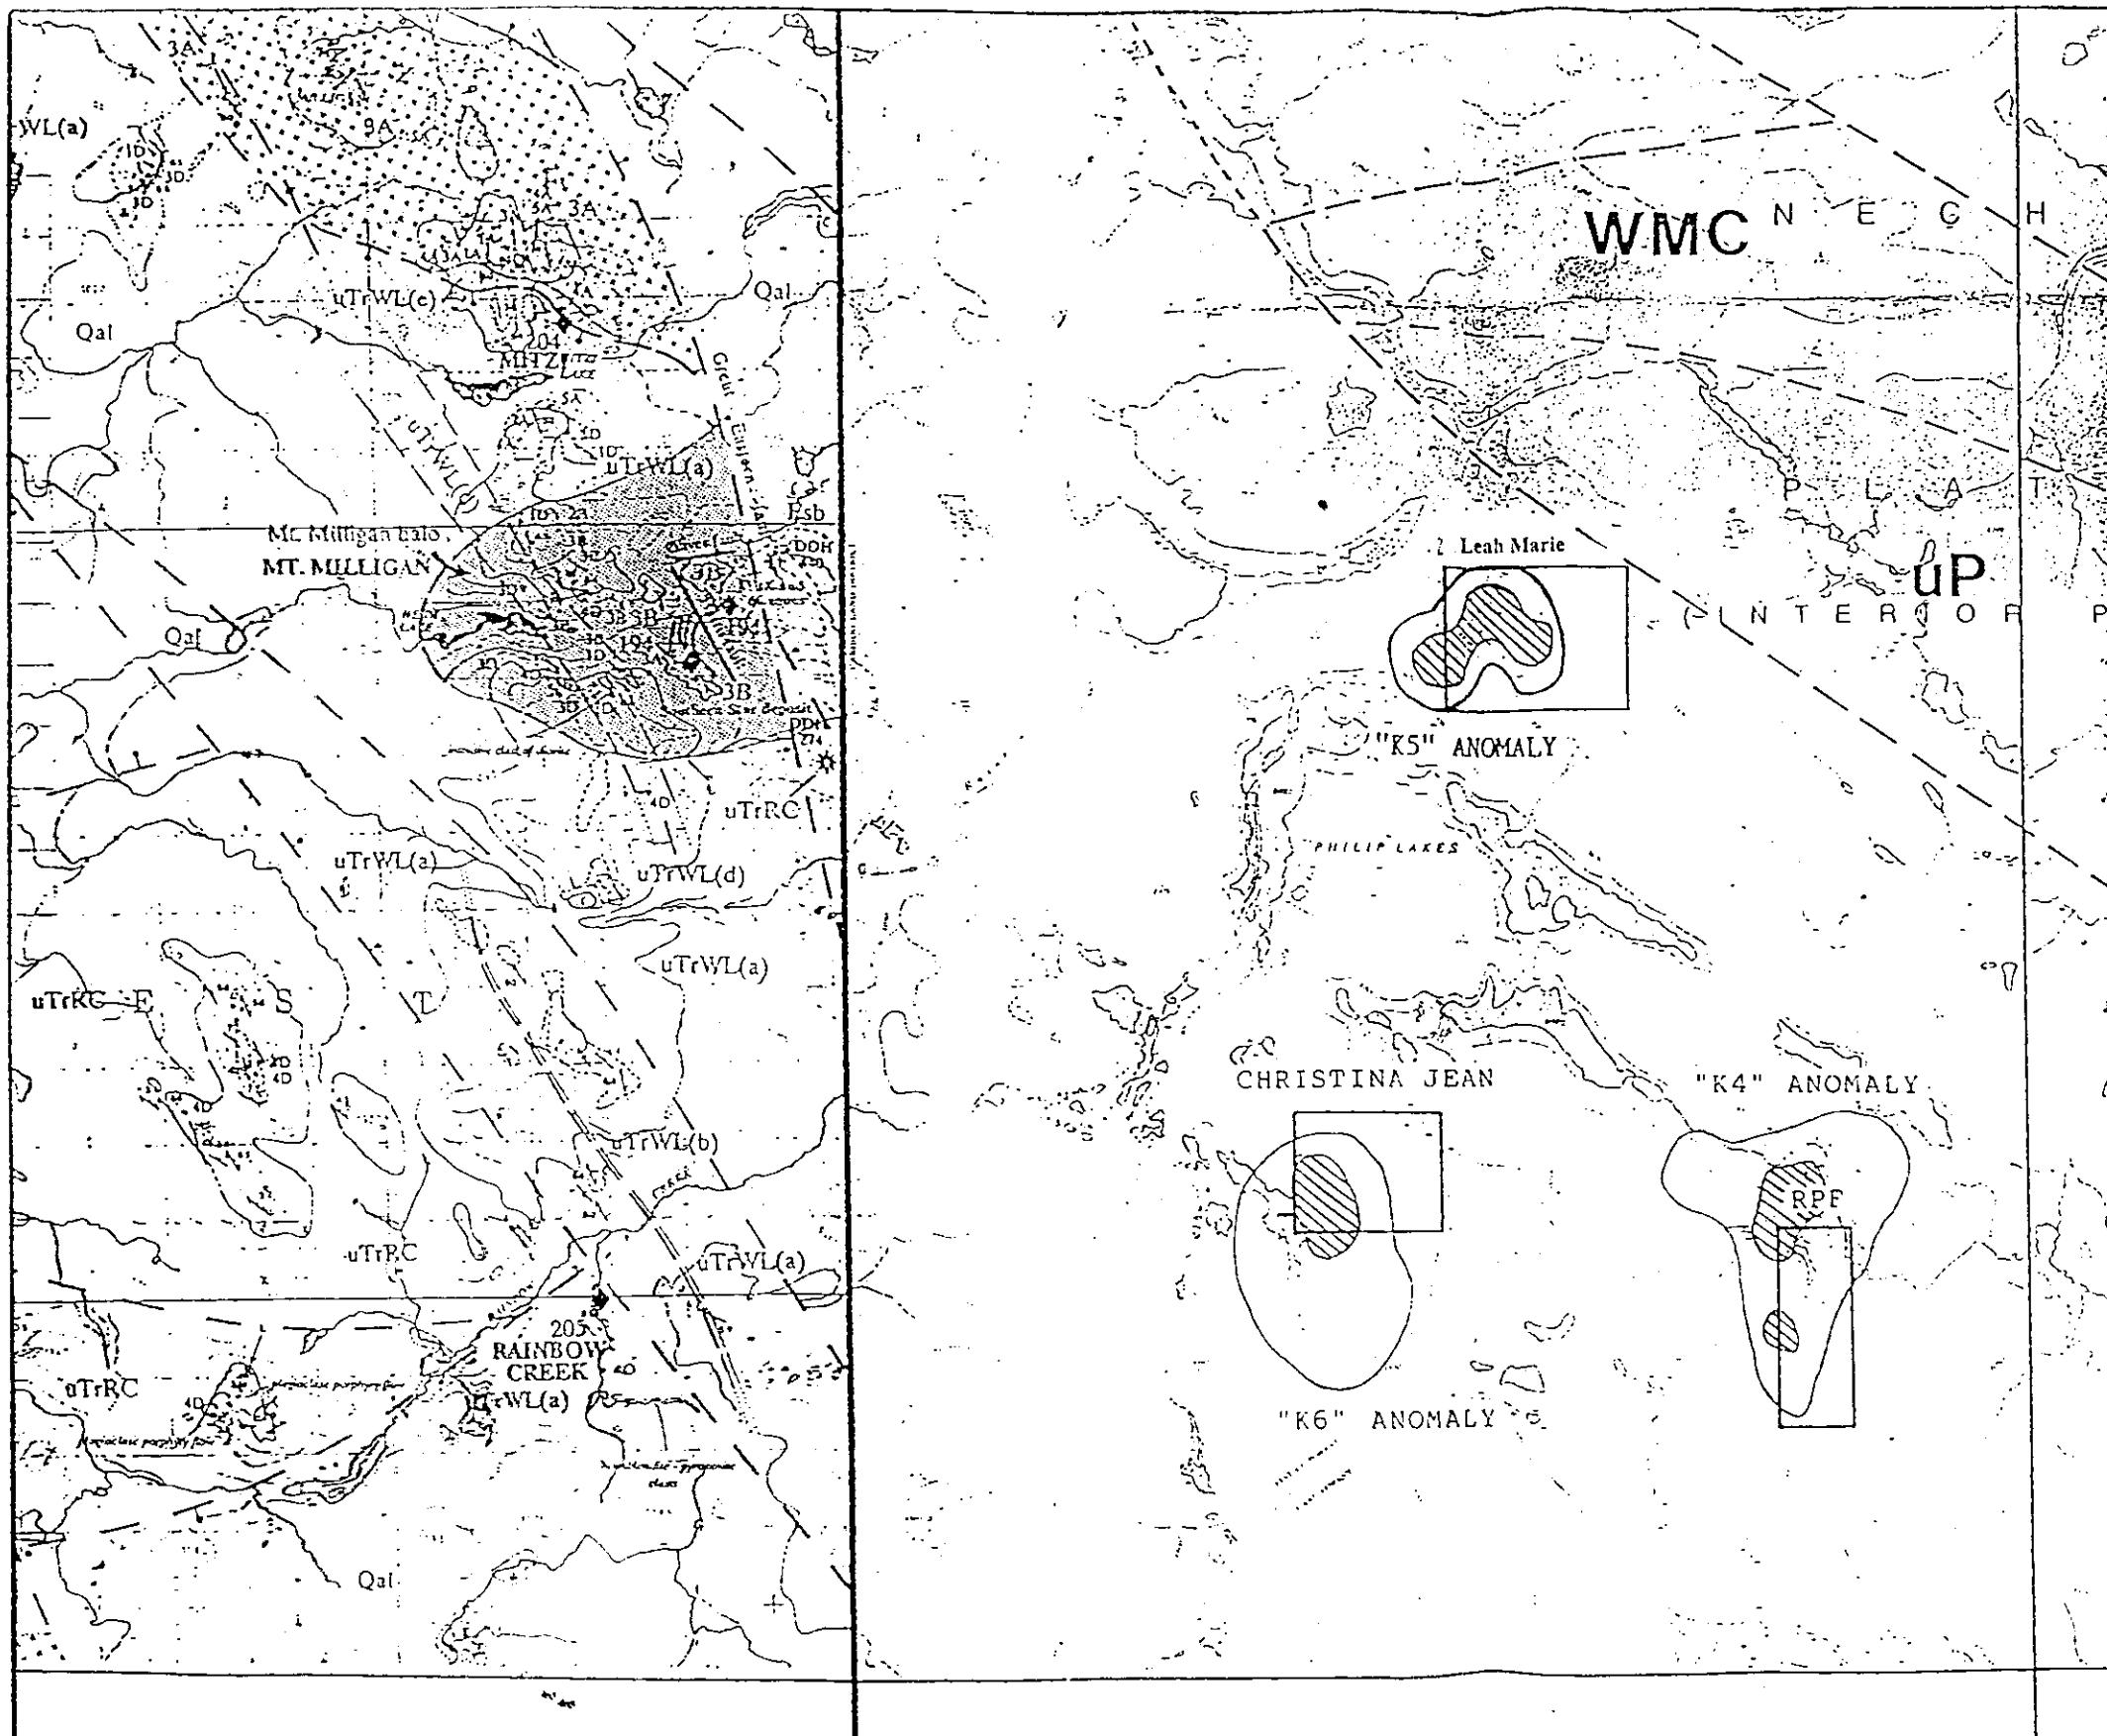

REPORT OF WORK - LEAH MARIE CLAIM - 1999

A continuation of the ground survey, with the gamma ray spectrometer, was done in 1999. Again, to get more specific information, to determine the exact boundaries of the K5 Potassium Anomaly show on the GSC Open File 2535 Airborne Geophysical Survey of Mt. Milligan Area, B.C., Sept. 1991. The Leah Marie Claim covers most of the anomaly shown on this survey. We laid out the required grid. Eighteen readings were taken on a grid of 50m x 25m to infill the grid taken the year before. We were unable to take further readings due to equipment failure. During analysis, it was discovered that the readings we had taken were inaccurate due to the faulty equipment.

Dave Forshaw

Scale = 1:100 000

A scale bar for distance, marked from 0 to 4 Kilometres. The scale is represented by a horizontal line with tick marks at each integer value.

Preliminary Note - (To accompany Graphs, Maps and Spreadsheets)

R.B.K.Shives
Head, Radiation Geophysics Section
Mineral Resources Division
Geological Survey of Canada
Ottawa

Hi Dave – thought I'd rush this to you – then discuss results. Call me when you can.

Some brief comments:

1. The 1999 readings are not valid. As illustrated on the graph of Raw Count Comparison, while total counts per minute appear only slightly lower in 1999 (relative to 1998 values), corresponding K, U and Th counts for 1999 stations are extremely low. This suggests a "gain" problem, which could be operator error (incorrect gain adjustment using the Cs137 source) or an instrumental problem (amplifier failure?). This may be determined upon examination of the DISA400A spectrometer, when it is returned to GSC.

2. 1998 Data

U values (MAP 2) collected along baseline appear significantly higher than elsewhere – K and eTh values no NOT show this - suggests temporal cause (were these surveyed as a group on one day, when rain/snow occurred, vs other stations on other days, when conditions were more ideal?)

Rob

?S - slight prob. with Table "1998 Results"
(first station (LM98-400N) appears twice)

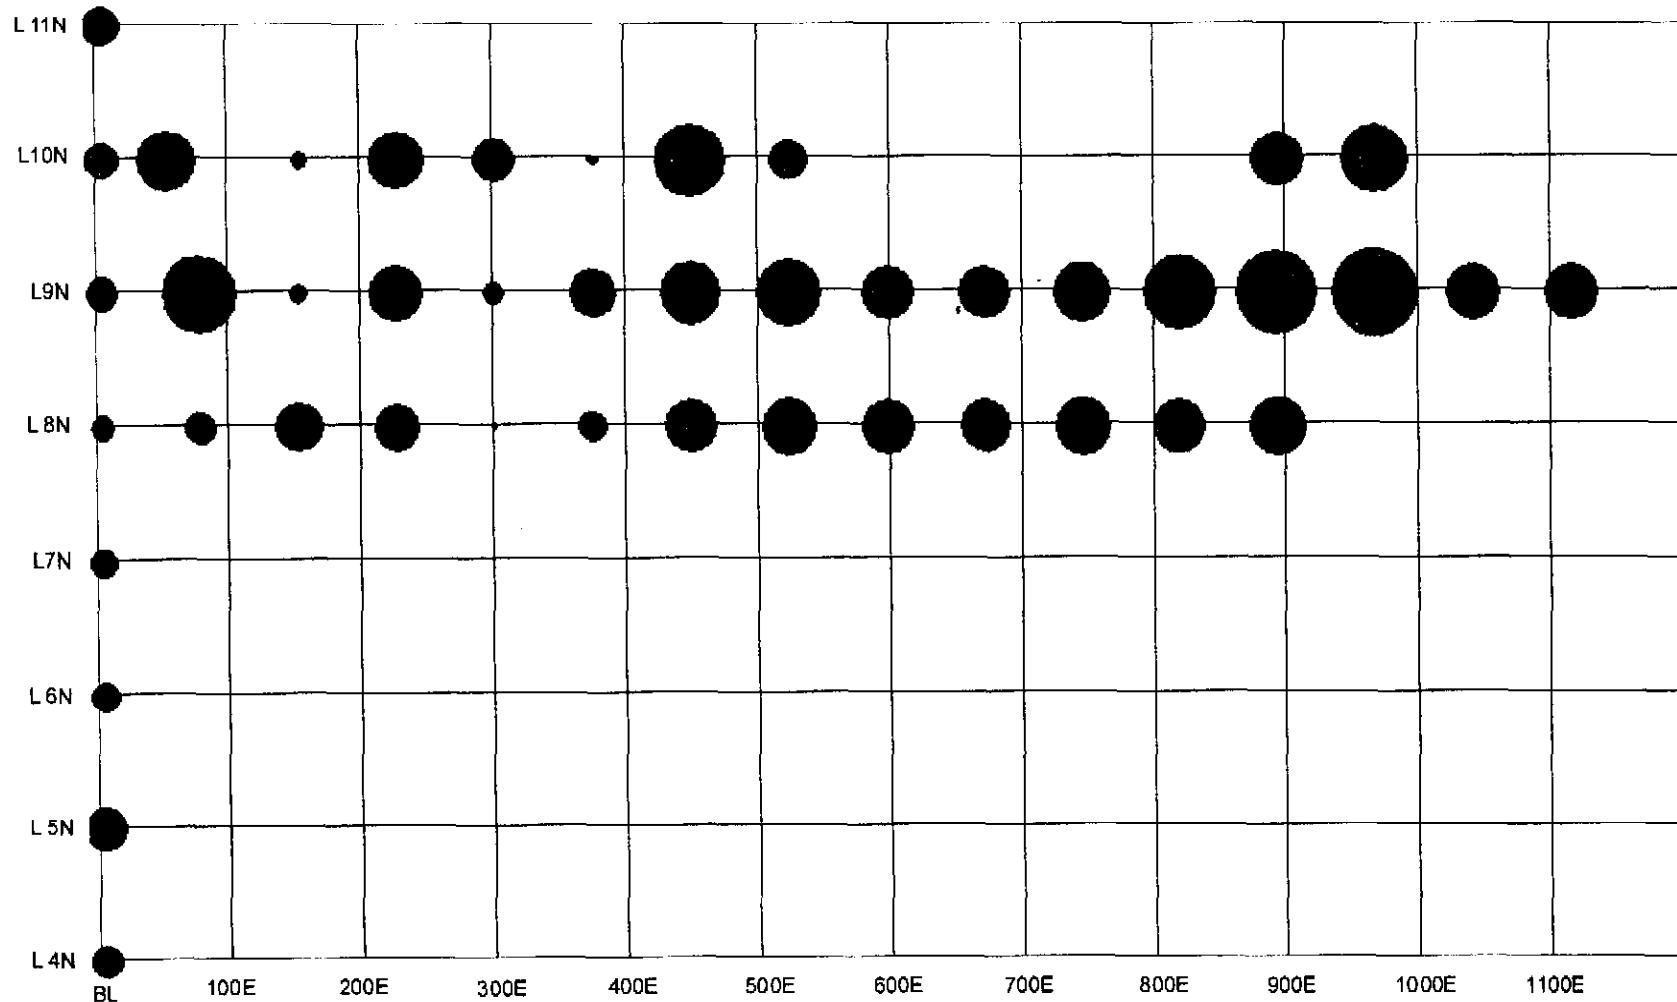

↳ will correct this on
final version

Ground Spectrometric Survey

Leah Marie Claim
September, 1998

Map 1: Potassium

Grid North
↑

Survey conducted by Dave Forshaw using an Exploranium Disa400A 4-channel spectrometer calibrated by Radiation Geophysics Section, Geological Survey of Canada, Ottawa. Following background removal, raw counts were corrected for spectral scattering and sensitivities were applied to yield K, eU, eTh values.

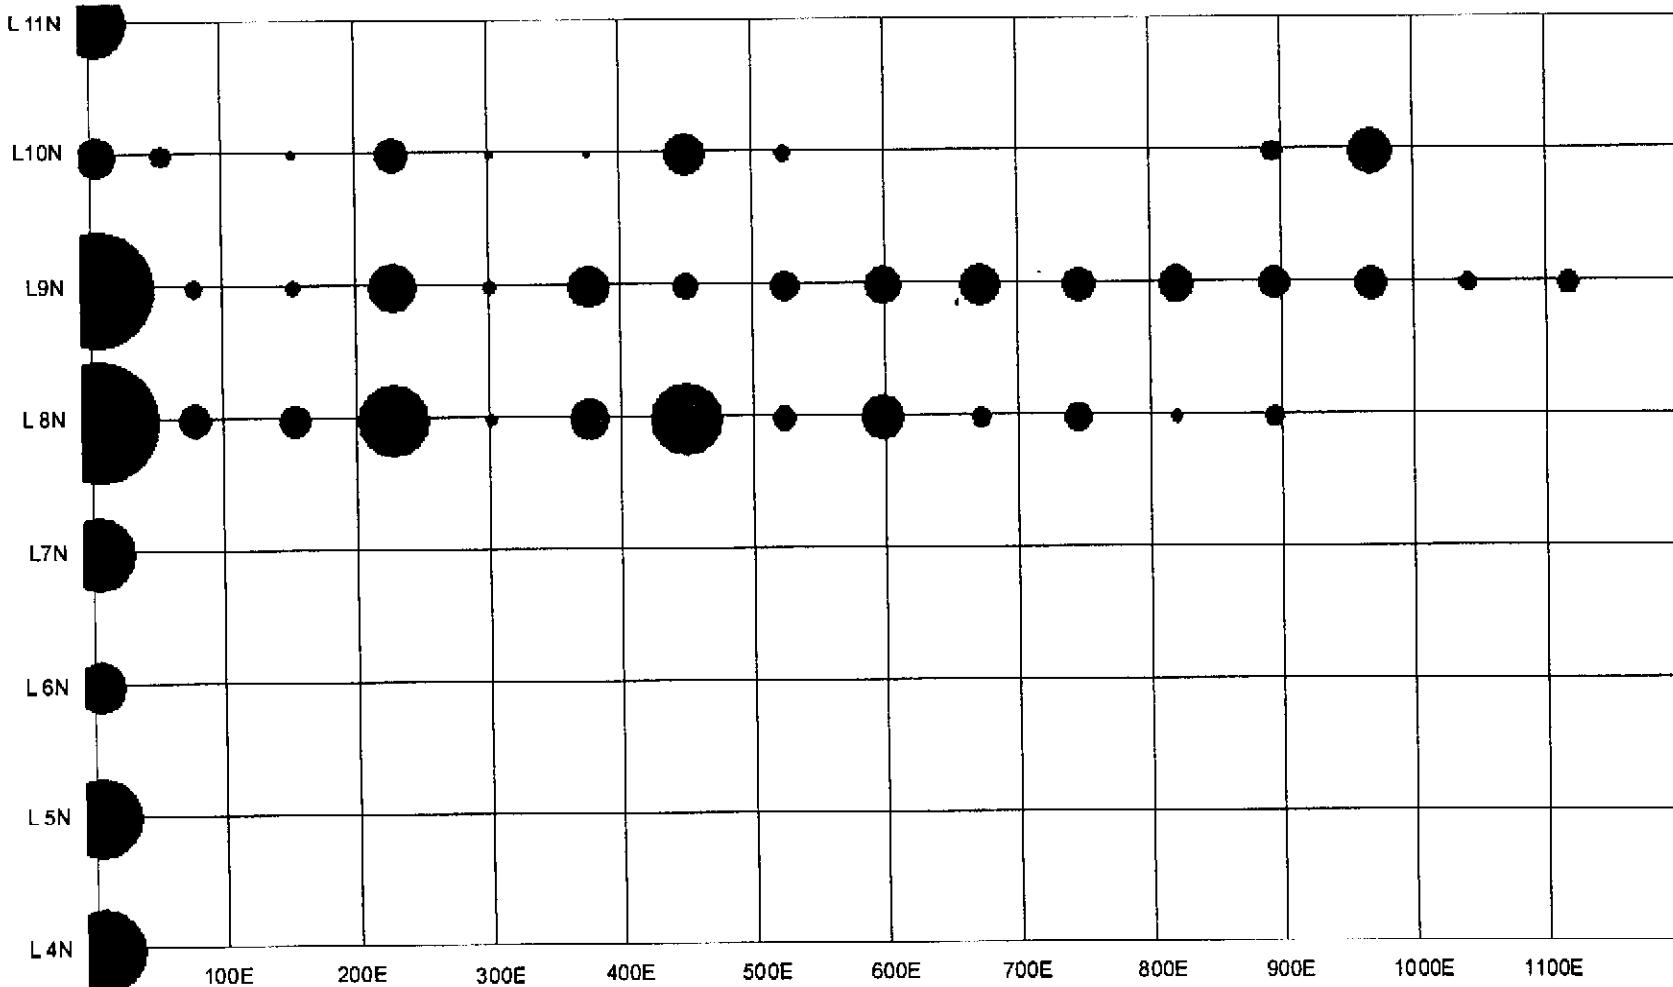

Caution: results have been scaled linearly to indicate relative variations - for interpretation, actual data values must be considered.

Ground Spectrometric Survey

STATEMENT OF QUALIFICATIONS

1. Twenty years active prospecting experience.
2. I have completed courses in the following: Basic Prospecting, Advanced Prospecting, Drift Prospecting, Radiometrics, Geochemical, Placer, and Industrial Minerals. I have attended the Cordilleran Roundup mining convention in Vancouver and the Minerals North Conference each year. I have also attended a great number of talks given by specialists in the mining field.
3. I have assisted with eight Basic Prospecting Courses, one Advanced Prospecting Course, and one Placer Course.
4. I am the mining consultant for the Mackenzie Economic Development Commission.
5. I represented the B. C. & Yukon Chamber of Mines in the Mackenzie L.R.M.P. process.
6. I assist teachers in Mackenzie and Prince George Elementary and High Schools with their Geology related subjects, in the classroom and on field trips. I now do this through the CAST program.
7. I am a member of the Omineca Exploration Group and actively work to bring the prospectors in our area educational courses, field trips, and interesting speakers from all aspects of the mining field.
8. I have also taken courses in Holistic Forestry and other forest related courses to further my understanding of our environment and for reclamation purposes, if ever needed.
9. The work on these claims has been monitored and done in close conjunction with Rob Shives of the Geological Survey of Canada, and his work in our area. He keeps records of our findings for his information.

Dave Forshaw
