1.10 Location and Access

The Spirit Dream property is located in the Fort Steele Mining Division approximately 25 km northeast of Cranbrook, B.C., within the Wild Horse River drainage (Fig. 1). Access is via forestry roads on either side of the Wild Horse River and logging roads which cross parts of the claim block.

1.20 Property

The Spirit Dream property includes 30 single unit 2-post mineral claims: Spirit Dream 1-4, SD 1-20 and HD1-6 (Fig. 2). The claims are owned by Brian Kostiuk of Cranbrook and Glen Rodgers of Skookumchuck.

1.30 Physiography

The Spirit Dream property is located east of the Rocky Mountain Trench and within the Wild Horse River drainage in the Hughes Range of the Rocky Mountains. Topography is moderate to steep with mainly wooded and locally rocky slopes. Elevation ranges from 1060 to 2060 meters. Forest cover includes mainly pine, fir and larch. Parts of the claim block have been logged and are in various stages of regeneration.

1.40 History

Old workings are present on the claim block north of the Wild Horse River. In 2002 a program of prospecting and rock geochemistry was conducted on the claims (Rodgers and Kennedy, 2002) with anomalous gold detected at a number of localities.

1.50 Purpose of Survey

In 2003 a contour soil geochemistry program was completed in the north portion of the claim block as a follow-up on favourable rock geochem results.

2.00 GEOLOGY

The area of the Spirit Dream property has been most recently mapped by Hoy (1979) and is entirely underlain by the Aldridge and Creston Formations, the lowermost units of the mesoproterozoic Purcell Supergroup. Both formations are of fine-grained clastic rocks including mudstone, siltstone and quartzite.

3.00 SOIL GEOCHEMISTRY

One hundred fifty soil samples were collected from four separate contour lines in the northern part of the claim group, on mineral claims SD 2 and SD 17-20 (Figs. 2 & 3). Collection lines are approximately 100 meters vertically apart, at elevations of 1500 m, 1600 m, 1700 m and 1800 m. Soils were collected from the 'B' horizon at an approximate depth of 15 cm, placed in Kraft paper bags, dried and then shipped to ACME Analytical Laboratories at 852 East Hastings Street, Vancouver, B.C., V6A 1R6, and analyzed for a 30 element ICP package and geochemical gold by standard analytical techniques. Sample sites and individual values for gold are shown in Figure 3. Complete geochemical analyses are provided in Appendix 1.

Results

Anomalous gold was detected on all four soil lines with values ranging up to 315 ppb Au. Higher values tend to follow a northerly trend across the four contour lines, somewhat oblique to a direct downslope direction and thus indicate that anomalous gold is coming from a bedrock unit which trends northerly.

Weak anomalous arsenic and zinc are locally present in the samples but neither correlate well with gold.

4.00 CONCLUSIONS AND RECOMMENDATIONS

Anomalous gold was detected by a contour soil sampling program in the northern portion of the Spirit Dream claim group. Higher gold values tend to form a northerly trend, suggesting a north-striking bedrock source. Weak anomalous arsenic and zinc in some of the samples generally do not correlate with gold and are thus not considered significant for further gold exploration.

Further work should include geologic mapping, more detailed rock geochemistry and possibly additional soil sampling.

6.00 STATEMENT OF EXPENDITURES

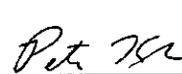

Collection of 150 soil samples @ \$5.50 / sample (includes truck)	\$825.00
Analysis of 150 samples @ \$14.50 / sample	2175.00
Shipping	40.00
Base map preparation, drafting	120.00
Access road maintenance (clearing windfall, modifying waterbars, removing debris from road, includes chainsaw rental)	175.00
Report 1 day @ \$300.00 / day	300.00
Report and field supplies	49.00
Total cost	\$3684.00

7.00 AUTHOR'S QUALIFICATIONS

As author of this report I, Peter Klewchuk, certify that:

1. I am an independent consulting geologist with offices at 246 Moyie Street, Kimberley, B.C.
2. I am a graduate geologist with a B.Sc. degree (1969) from the University of British Columbia and an M.Sc. degree (1972) from the University of Calgary.
3. I am a Fellow of the Geological Association of Canada and a member of the Association of Professional Engineers and Geoscientists of British Columbia.
4. I have been actively involved in mining and exploration geology, primarily in the province of British Columbia, for the past 28 years.
5. I have been employed by major mining companies and provincial government geological departments.

Dated at Kimberley, British Columbia, this 15th day of October, 2003.

 Peter Klewchuk
 P. Geo.
