Tenure #504046 Prospecting Report

This area was prospected by D.J. McLelland, while in the company of his Father prospector D.B. McLelland on August 5th and 6th 2005.

The Area was accessed by a newly constructed logging road which comes near to the south side of the claim ( as shown on the attached 1:10,000 scale Geology and Showings map).

This mineral claim lies due south of the Minfile recorded Mary(092F 207) Copper Skarn Showing in the Same Vancouver Sedimentary Group.

Targets were signs of copper mineralization or other nineralization, or any other sign of Skarn.

The First Route Taken was up a steep creekbed which intersects the mapped contact.

Inference of the contact is present in the changes in rock at outcrop however the contact itself likely lies buried beneath the creek bed.

There was no sign of skarn or mineralization seen on either trip.

A next trip further up slope is planned for 2006.

Area Prospected: approximately 1.5 square Km

Samples were taken for future background record at:

- 1) not in claim
