INTRODUCTION

THIS REPORT HAS BEEN PREPARED FOR THE PURPOSE OF FILING ASSESSMENT WORK CREDIT AND FULFILLING THE REQUIREMENTS OF THE MINERAL ACT AND REGULATIONS.

FIELD WORK ON THE STELLER CLAIM TENURE #542304, WAS CARRIED OUT BY TOM MCDONALD AND ALFRED MCKAY BETWEEN MAY 2007 AND OCT 2007.

A TOTAL OF 3 ROCK SAMPLES AND 36 SOIL SAMPLES WERE COLLECTED AND ANALYZED.

THERE WERE WINDFALLS AND ROCKS ON THE ROAD THAT HAD TO BE CLEARED TO ACCESS OUR AREAS OF INTEREST.

TWO NEW LOGGING BRANCH ROADS WERE PUT IN BY A LOGGING COMPANY AND THAT IS WHERE WE TOOK SOME OF OUR SOIL SAMPLES ALSO ONE NEW STEEL BRIDGE WAS PUT IN BY THE SAME COMPANY.

40

GENERAL SETTING

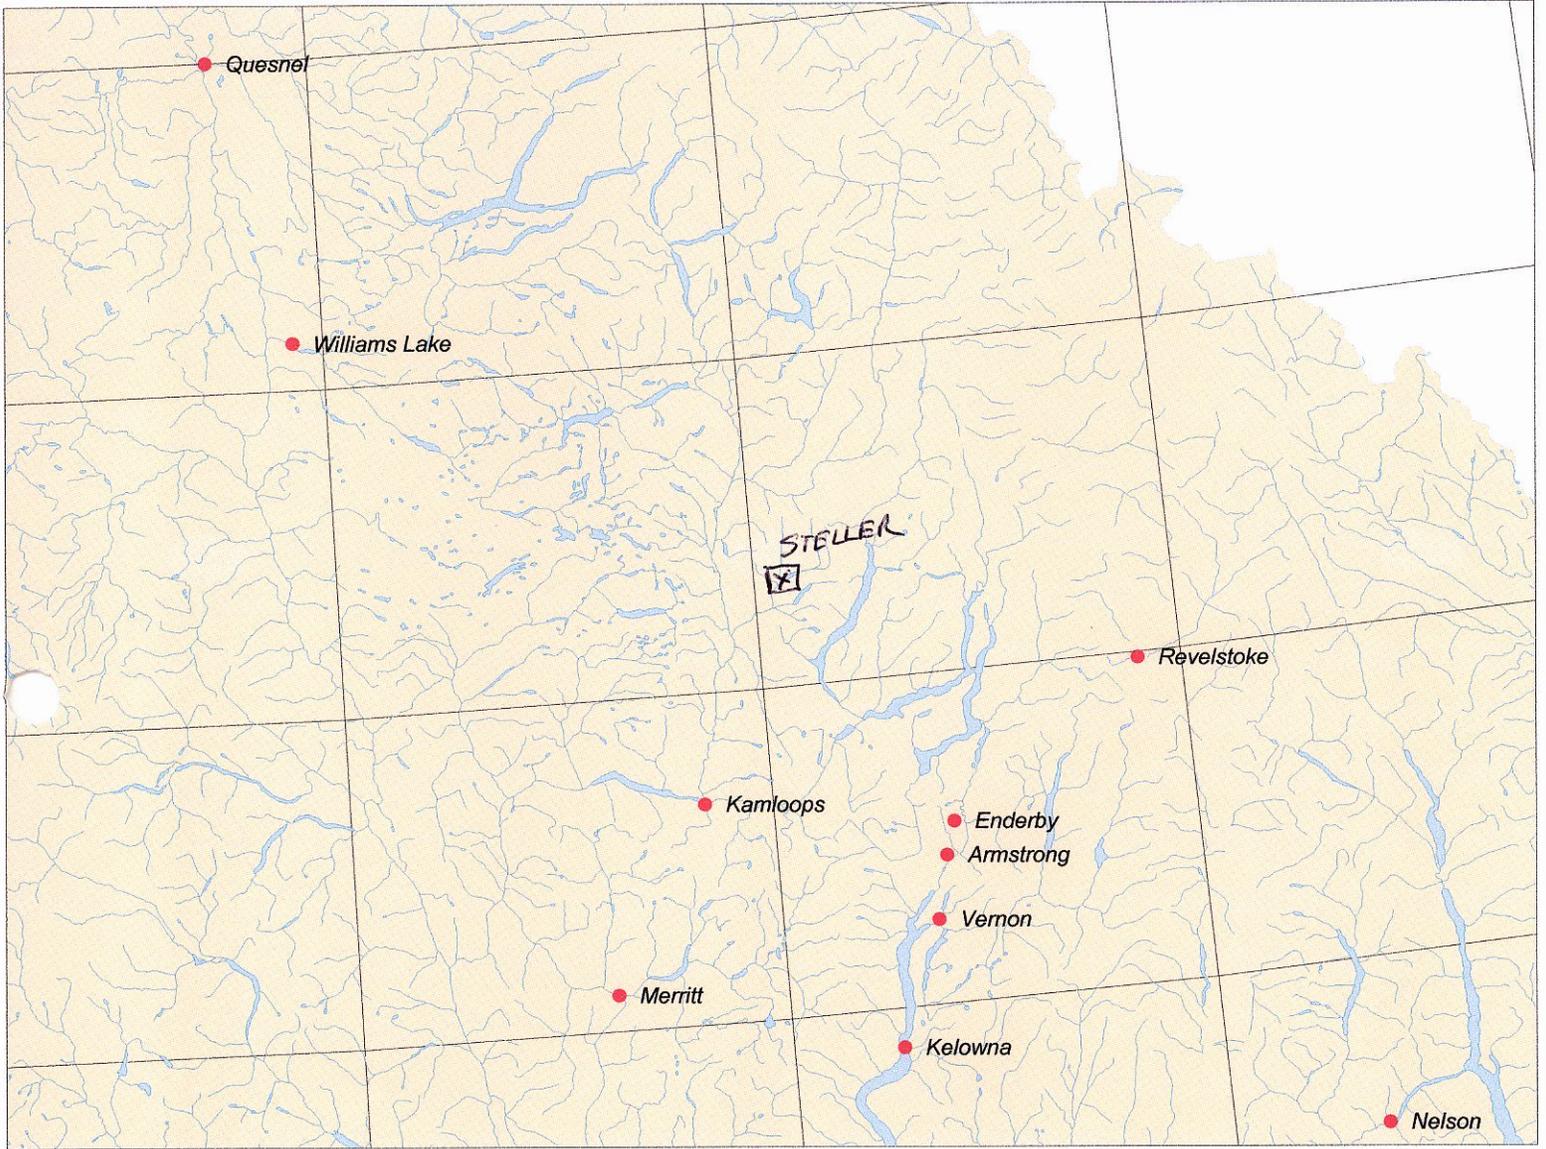

The Steller claims are located N and W of the W end of North Barreire Lake with Harper Creek running N to S down the approximate center of the claims. The slope on the claims is moderate with a large flat on the south west corner close to Birk Creek. The elevation is from 600 metres on the S side to 1350 metres on the N side. The property receives 2 to 3 metres of snow in the winter months and is snow free from April-May until late November. The property is heavily wooded with mature Cedar, Spruce, Fir, Alder and Birch. Several areas of the property have been logged. Outcrops are scarce over the claim area with glacial overburden up to 10 or more metres in thickness. Several mineralized outcrops have been exposed by logging, mining roads and trenching.

LOCATION

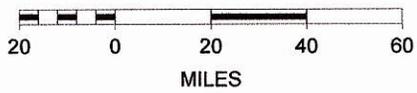

The steller claims are located 80 kilometres NNE of Kamloops B.C. and 24 kilometres NW of Barriere B.C. Access to the property is on paved road on the east Barriere Lake road for 16 kilometres then turn N on the good dirt road 10 to 12 kilometres on the north Barriere road where the Birk creek and Harper creek roads branch north onto the Steller claims. There are several Small 4 wheel drive or ATV access roads on the claims from the north Barriere lake road, Birk and Harper creek roads.

SUMMARY

Previous work dates back to the 20's when prospectors located several massive sulphide showings along Birk Creek which were explored by adits and trenches (3>35 metre tunnels). Several mining co's have been exploring the area from the 1920's to the 1990's including Kennecott, Barriere Lake Mines, Scurry Rainbow oil, Duncanex Resources, Victoria Resources, Craigmont Mines, Canadian Superior Exploration, Westech Resources, Noranda, Falconbridge and Teck (Cominco) in 1993. The area has been well mapped with 280km of airborne (magnetics, Resistivity, VLF), over 1000 soil samples, geological mapping and trenching, 67 line kilometers of IIP and diamond drilling (70 DD holes). Over 3 million has been spent. Several category 1 anomalies were delineated and most remain untested. Exploration has been focused on VMS Hosted in Devonian-mississippian felsic to intermediate volcanic rocks. The rocks belong to the upper Devonian to Mississippian Eagle Bay formation and consists primarily of Felsic Volcanics, Grey Phyllite and local intermediate tuff. The cretaceous Baldy Batholith intrudes these formations, which are folded and metamorphosed to lower Greenchist Facies. There is clearly a large system at play (possibly an underlying stock of the Baldy batholith) supplying the area with intense hydrothermal alteration). An up to date deep penetrating airborne survey should be flown over the property such as Fugo due to the depth of till and more stream sediment sampling should be done then a large scale, systematic, drilling program is the only real remaining step for this project. Minnova's Samatsonian deposit is located approximately 25km to the south east and Inmett's Chu Chua deposit is 18km to the west and Novasota Resources has claims to the west of us. Amera Resources is also in the general area. We have several interesting assessment reports including 14,388 (Noranda), 23,240 (tech), 15802 (Westech) 3333 (Duncanex), we also have several of Falconbridge's trenching and drilling reports in our possession. Several roads have been cleared for access and for collecting and sampling of mineralized rock, About 12km of roads have been cleared to a minimum of 2 metres, good for a small 4 WD. Our goal is to option the property off.

Analytical Procedure Assessment Report

MULTI ELEMENT ICP ANALYSIS

A 0.5 gram sample is digested with 3ml of a 3:1:2 (HCl:HN03:H2O) which contains beryllium which acts as an internal standard for 90 minutes in a water bath at 95°C. The sample is then diluted to 10ml with water. The sample is analyzed on a Jarrell Ash ICP unit.

Results are collated by computer and are printed along with accompanying quality control data (repeats and standards). Results are printed on a laser printer and are faxed and/or mailed to the client.

	Detection Limit			Detection Limit		
	Low	Upper		Low	Upper

Gold, Platinum, Palladium Geochemistry

Samples are sorted and dried (if necessary). The samples are crushed through a jaw crusher and cone or rolls crusher to -10 mesh. The sample is split through a Jones riffle until a -250 gram sub sample is achieved. The sub sample is pulverized in a ring & puck pulverizer to 95% - 140 mesh. The sample is rolled to homogenize.

A 15 g sample size is fire assayed using appropriate fluxes. The resultant dore bead is parted and then digested with aqua regia and then analyzed on a Perkin Elmer AA instrument for Gold and Palladium. Platinum is analyzed by ICP.

Appropriate standards and repeat sample (Quality Control Components) accompany the samples on the data sheet.

Copper Assay

Method Outline

Samples and standards under go an aqua regia digestion in 200 ml phosphoric acid flasks. The digested solutions are made to volume with RO water and allowed to settle. The metals of interest are determined by Atomic absorption procedures. Instrument calibration is done by verified synthetic standards, which have undergone the same digestion procedure as the samples.

Digestion

1. Weigh 0.5g sample into 200 ml phosphoric acid flask.
2. Add 20 ml conc. HN03 to flasks using a calibrated dispenser.
3. Remove flasks from hot plate and when cool, add 60 ml conc. HCL from a calibrated dispenser. Put flasks on hot plate and digest for 60 minutes
4. Remove flasks from hot plate, allow to cool to room temperature and bulk to 200.ml mark with RO water.
5. Allow assay to settle or clarify by centrifuging an aliquot for analysis.

Analysis

- Run the analysis by Atomic Absorption using the instrument parameters in the following table.
- Set up calibration with verified synthetic standards.
- Verify instrument calibration after every 10 samples.
- Perform analysis in the linear range of the absorbance curve. It may be necessary to dilute some samples or rotate the burner to do this.
- Standards used narrowly bracket the absorbance value of the sample for maximum precision.

Quality Control

- Standard quality control procedures are used for these determinations. (ie repeat every 9 samples)
- Run one Can Met CRM/WCM CRM for each batch of 35 or less samples (one CRM per work sheet)
- The following Can Met CRMS/WCM CRM are available in this laboratory.

CRM	Cu%
CZn-1	0.144±0.003
CZn-3	0.685±0.008
KC-1a	0.629±0.015
Su-1A	0.967±0.005
CCU-1a	26.78±0.07
CCU-1b	24.67±0.03
Cu106	1.43
Cu107	0.28
PB106	0.62

Reporting

Minimum reportable concentration is as follows:

Cu 0.01%

x

STATEMENT OF COSTS

TENURE #, 542304

START DATE--MAY 11TH/ OCT 24TH / 2007

A.R MCKAY ----FMC# 117683

WAGES:

ROAD CLEARING, SOIL SAMPLING, &ROCK SAMPLING.

9 DAYS @ \$200/ DAY-----\$1800.00

TRANSPORTATION & FUEL:

2006 GMC 3/4 TON 4X4 P/U & CAMPER

9 DAYS @ \$75./DAY -----\$675.00

FOOD & ACCOMMODATIONS:

9 DAYS @ \$60 /DAY-----\$540.00

EQUIPMENT:

POWER SAW -----3 DAYS WORKING@\$30/DAY-----\$90.00

6 DAYS STANDBY @ \$10/DAY-----\$60.00

TOTAL-----\$3165.00

STATEMENT OF COSTS

PROSPECTORS QUALIFICATIONS

1----- I GRADUATED FROM HIGH SCHOOL IN 1963

2----- I RETIRED FROM CP RAILAS A LOCOMOTIVE ENGINEER IN 1997 AFTER 33 YEARS SERVICE.

3-----I HAVE BEEN ACTIVE IN PLACER MINING AND MINERAL CLAIMS FOR THE PAST 35 YEARS

YEARS, AND HAVE ATTENDED SEVERAL COURSES THAT THE "KEG" PUTS ON IN KAMLOOPS AND ALSO ATTEND THE ANNUAL CONFERENCE AND TRADE SHOW HELD IN APRIL EVERY YEAR.

A.R. MCKAY

PROSPECTORS QUALIFICATIONS

IN MAY 2003 I ATTENDED BCIT'S COURSE 1005, PROSPECTING EXPLORATION FIELD SCHOOL IN OLIVER B.C.

IN MARCH 2004 I ATTENDED BCIT'S COURSE 1010, EXPLORATION AND MINING FOR INVESTMENT ADVISERS IN VANCOUVER .B.C.

IN JANUARY 2004 AND 2005 I ATTENDED THE BCYCM,S CORDILLERAN ROUNDUP. I ALSO ATTENDED THE KEG'S MINERAL CONFERENCE IN 2004 AND 2005.

I STARTED ACTIVELY PROSPECTING IN THE SUMMER OF 2004 AFTER RETIRING FROM THE CPR IN MAY 2004.

TOM MCDONALD.
