Prospecting traverse and Sample location map	pg. 4

Location and Access: Driving north from Terrace BC on the Nisga Highway until reaching Maroon Creek and then continuing until reaching Maroon Trail. From this point go East from the Nisga Highway. You will then come onto the Krystal 2 Claims.

Claim History: None currently available.

Status: Krystal 2 Tenure #543813, on which the work was performed on are owned by Richard Moll, a prospector from Houston, BC. Wes Moll and Richard Moll of Houston, BC performed the Assessment work on the claims. With the acceptance of this assessment report the claims will be in good standing as follows:

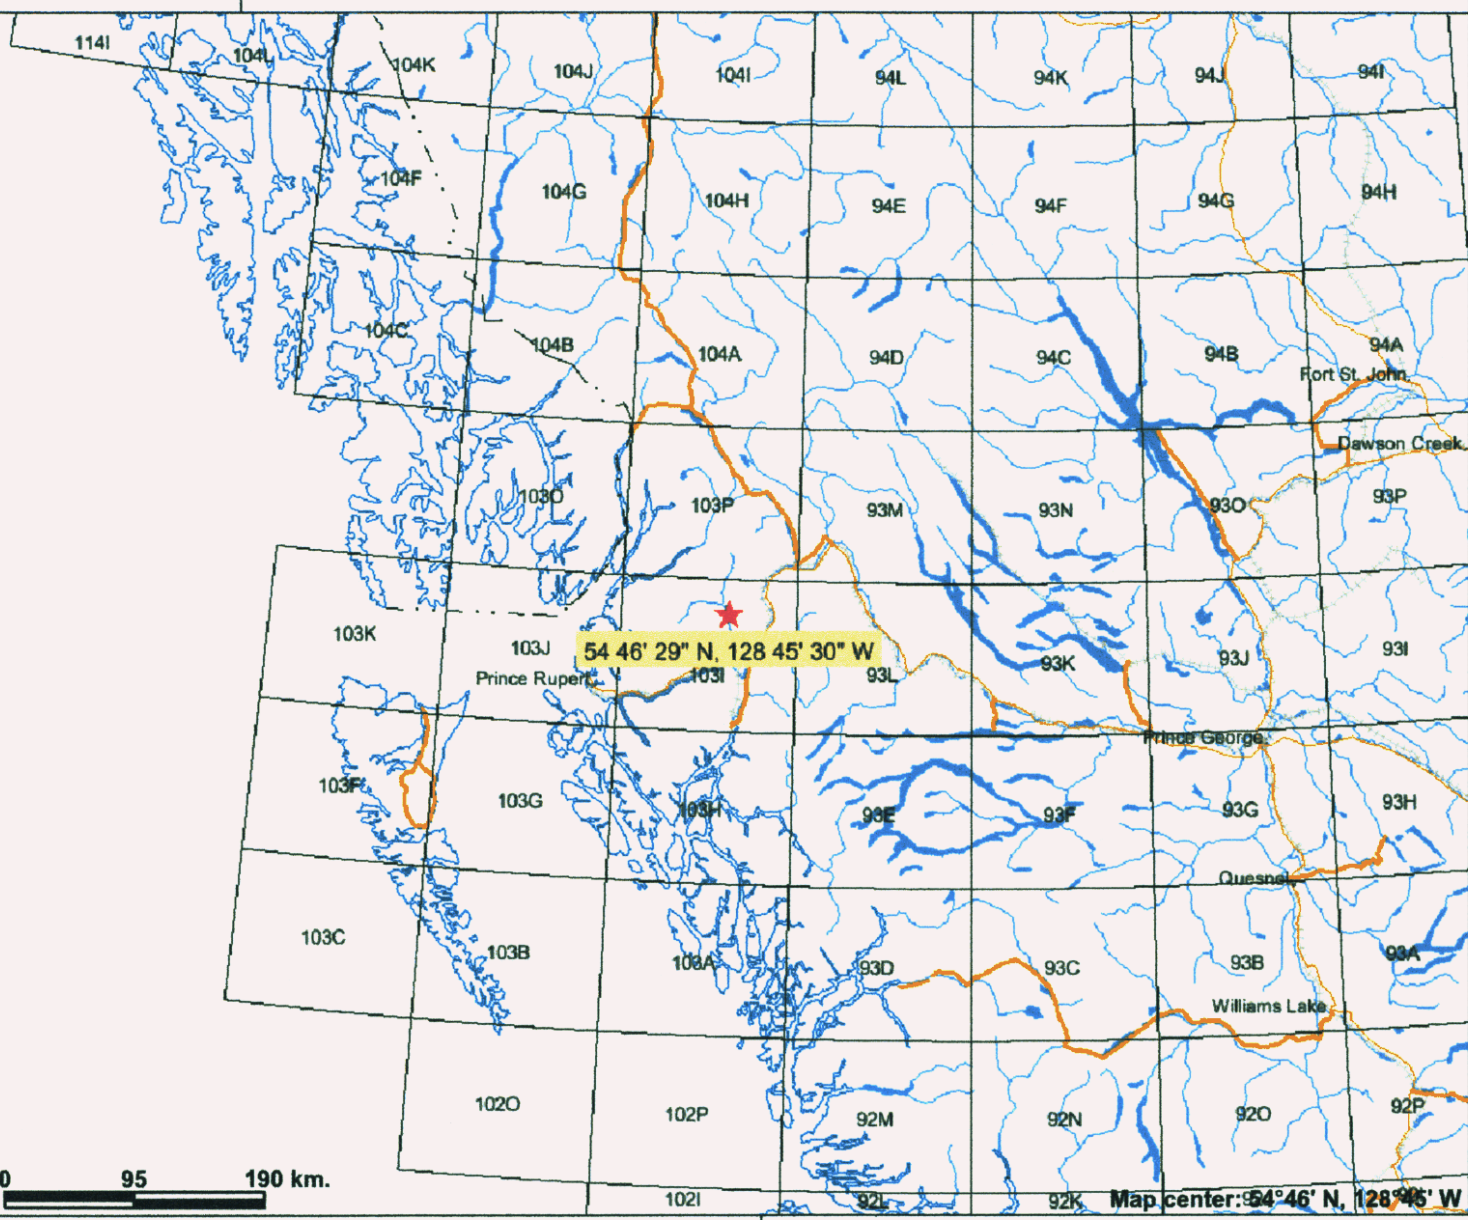

Krystal 2, Tenure #543813: Land Area 74.61 Hectares expire on 2010/oct/23

Purpose: Prospecting was undertaken to see if there was any bedrock that contained Andalusite on the property.

Procedure: A traverse was taken onto the claims and the numerous waterways were followed due to the steepness of the terrain and the thick underbrush. An old logging road was encountered and was followed until coming across a slide. The debris from the slide contained Andalusite crystals ranging in size from ¼" to 1". There was also an abundance of iron to be seen in the rock as well as garnets ranging in colour from yellow to red. There were two outcroppings encountered approximately 100 to 150 meters apart. A sample was taken and sent to Assayers Canada in Vancouver BC for analyses.

Conclusion: The Andalusite occurs in a Mica Shist that is believed to be of Upper Jurassic Age. It resides in a Bowser Sediment where it comes into contact with a Metamorphosed Zone. No other minerals of interest were found in this sample. It was determined that more prospecting will be necessary.

SAMPLE DESCRIPTION

A mica schist with a small vein of sillimanite, andalusite crystals and garnets. The andalusite crystals make up about 10% of the sample with crystals ranging to 1 inch. There are an abundant amount of garnets yellow to red in color up to 1/4 inch in size. Iron pyrite is disseminated throughout the sample.

A 5 gm sample is digested with 5 ml 3:1 HCl/HNO3 at 95°C for 2 hours and diluted to 25ml.

Prospecting

Wes Moll Prospector: 1 Day @\$300 per Day
Richard Moll Prospector: 1 Day @\$250 per Day
1 Four Wheel Drive Pick-up: 1 Day @\$100 per Day
1 Assay plus Handling=\$50
1 Report=\$250

TOTAL

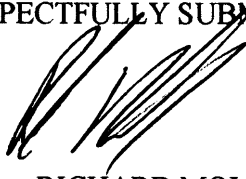

\$950

AUTHORS QUALIFICATIONS

I, RICHARD WESLEY MOLL, DO CERTIFY THAT:

- (1) I am a prospector and reside at 2434 Benson Avenue, Houston BC
- (2) I have several years of prospecting experience.
- (3) I prepared this report.

RESPECTFULLY SUBMITTED,

A handwritten signature in black ink, appearing to read 'R. Moll', is written over the text 'RESPECTFULLY SUBMITTED,'.
