## **1. INTRODUCTION**

This report provides a discussion of the 2008 geological exploration work conducted on the Big Bar property in fulfillment of the assessment work requirements on behalf of Takara Resources Inc.

The work program that was carried out included 20 days of technical work that involved collecting 246 soil samples and 40 rock samples, following from a site visit in August of 2008. CCIC initiated a GIS compilation prior to field work, which is being used to direct the exploration program.

## **2. RELIANCE ON OTHER EXPERTS**

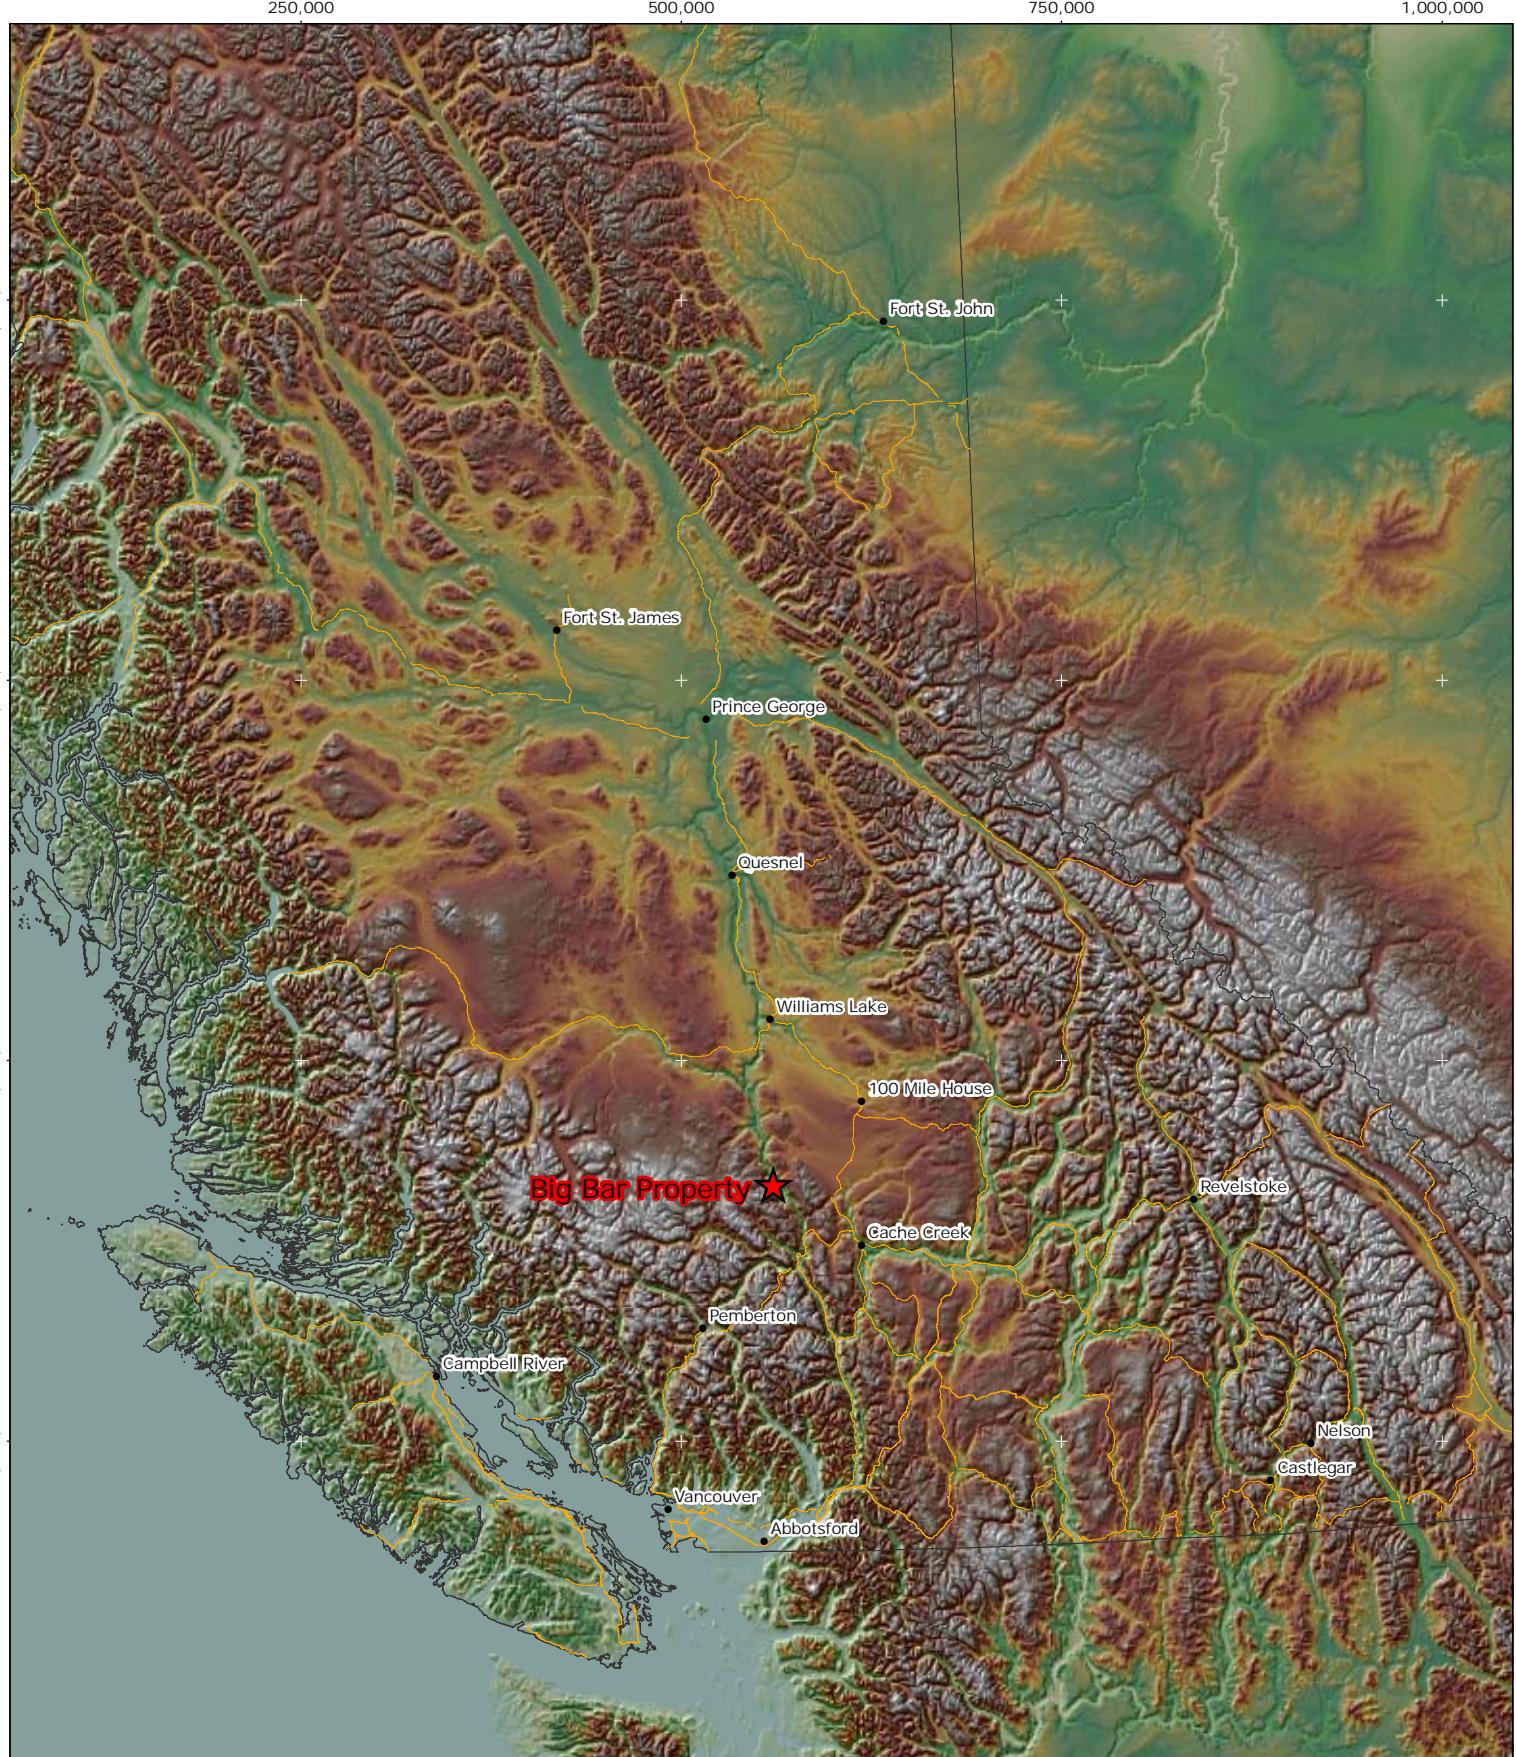

This report was prepared by Julie Brown and Pamela Strand. The information, conclusions, and recommendations within this report are based on a review of published geological reports, interpretation and analysis, site visits (with Stephen Wetherup, PGeo) and geological field work. The author assumes that reference material (in the “References” section) is accurate and complete.

Mineral title, ownership, and claim status information in this report was obtained from MINFILE, a digital resource provided by the Ministry of Energy, Mines and Petroleum Branch, British Columbia. The author has made every attempt to accurately convey the content of reference material, but nonetheless cannot guarantee the accuracy of validity of historical work.

## **3. PROPERTY LOCATION, DESCRIPTION and OWNERSHIP**

### **3.1 Location, physiography, and access.**

The property is located 55km west of the town of Clinton, located on highway 97 – approximately 200km northeast of Vancouver (Figure 1). The property is easily accessed by vehicle along a series of well-maintained all season dirt roads.

 Caracle Creek International Consulting Inc.  
Geological & Geophysical Consultants

Topographic variation on the property varies from 300m at the Fraser River up to ~1600m. Alluvial deposits have created terraces that comprise much of the overburden. Terrain is rugged, owing to creek drainages that have incised terraces, resulting in deep gorges. Vegetation is sporadic, with stunted brush occurring at lower elevations giving way to sparse pine forest higher up.

### **3.2 Ownership**

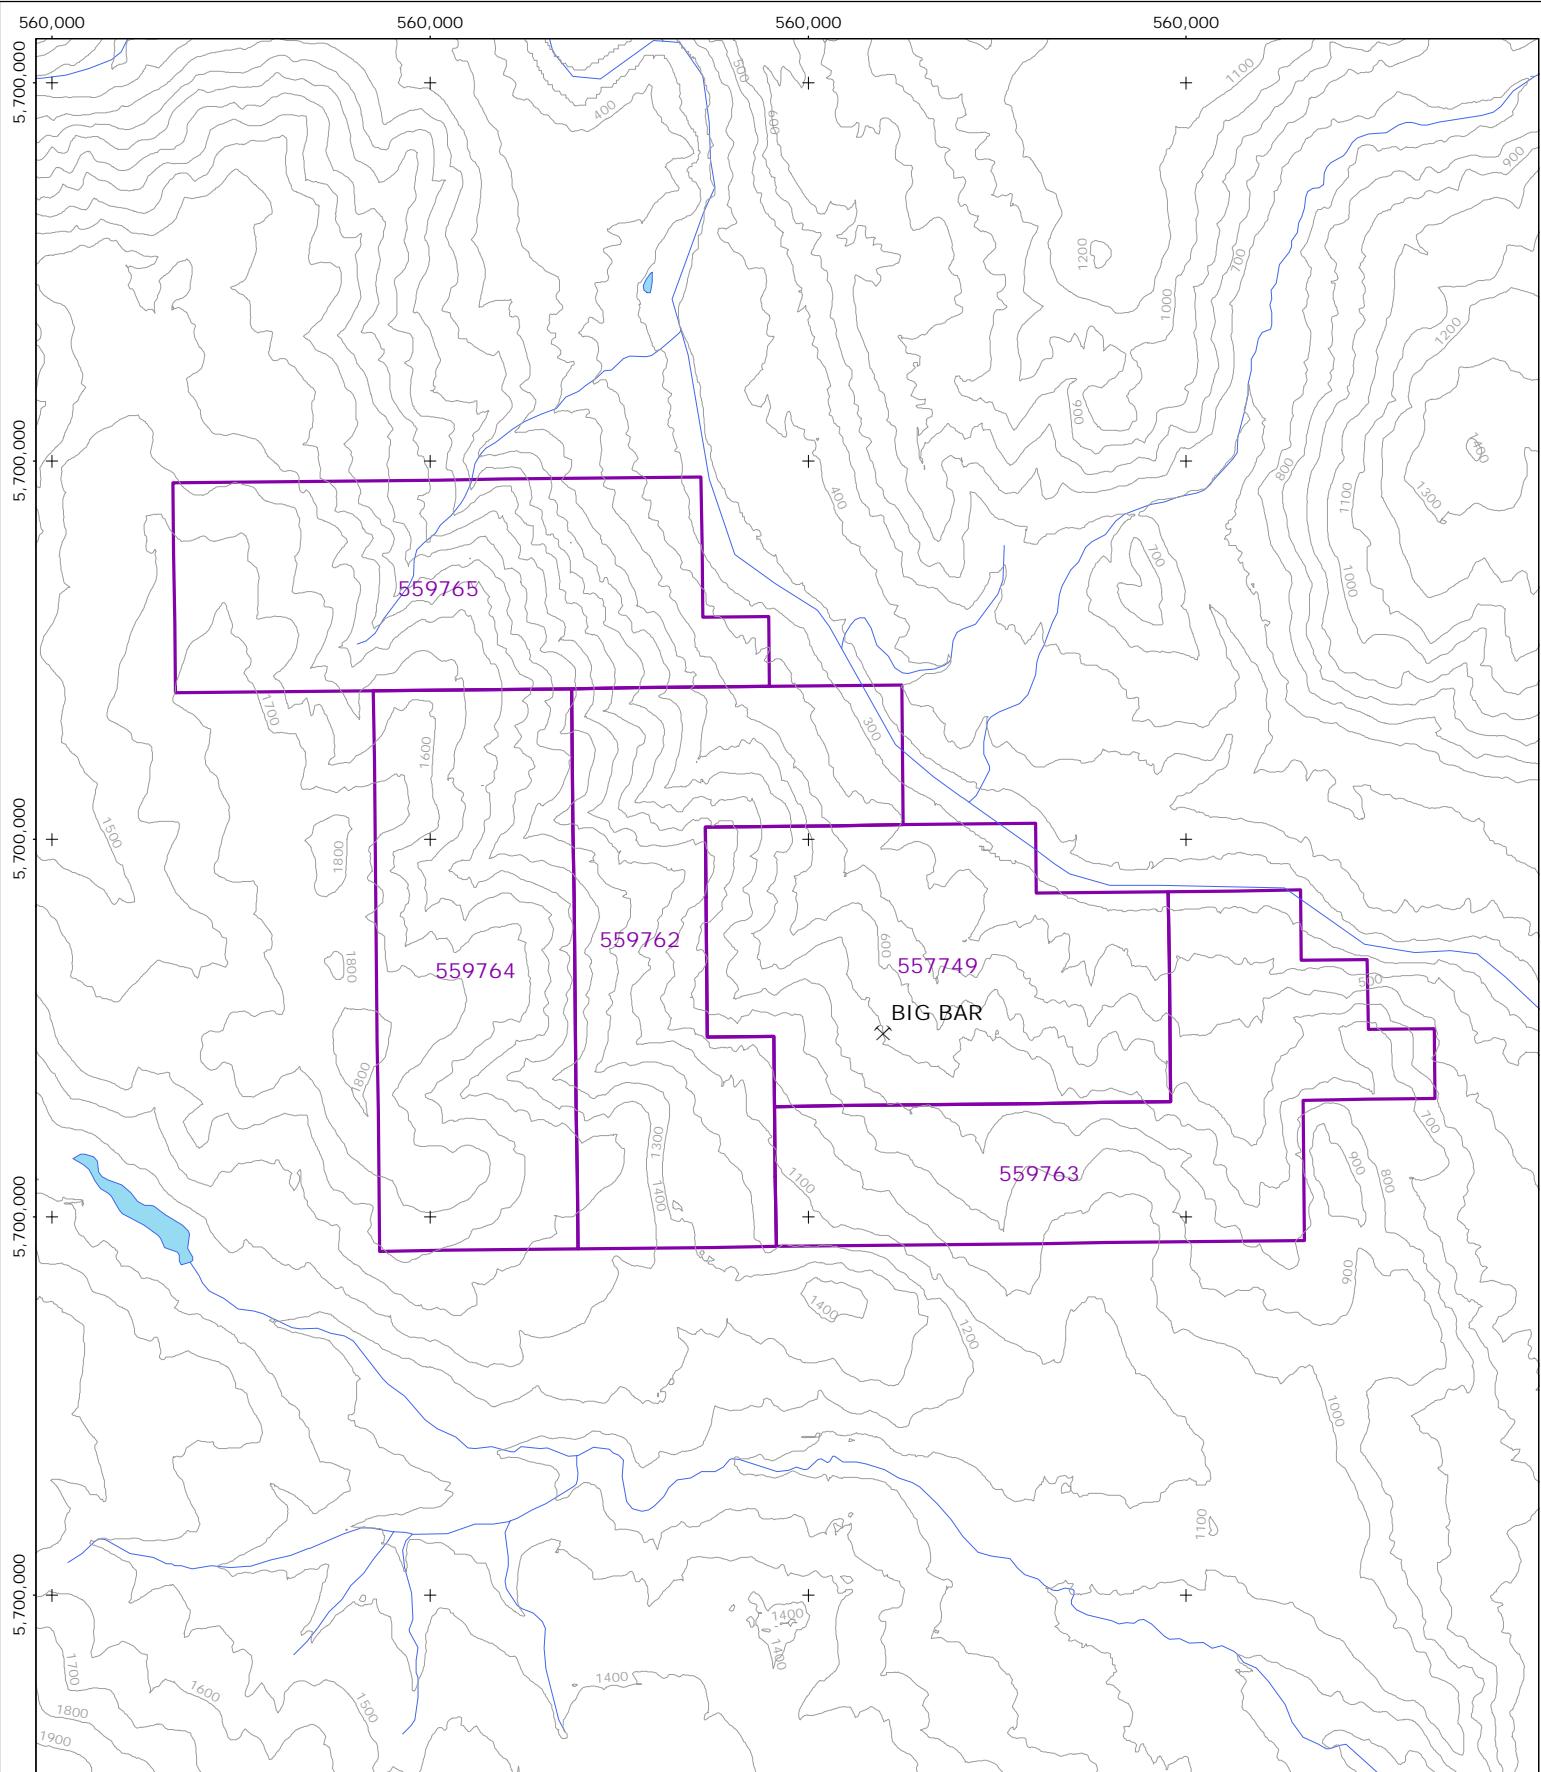

The Big Bar property consists of five contiguous mineral claims covering approximately 10786 hectares (Table 1, Figure 2).

Table 1: List of Claims

Tenure Number	Type	Claim Name	Good Until*	Area (ha)
557749	Mineral	BIG BAR	20120930	506.572
559762	Mineral	BIG BAR 2	20120930	506.537
559763	Mineral	BIG BAR 3	20120930	506.689
559764	Mineral	BIG BAR 4	20120930	486.282
559765	Mineral	BIG BAR 5	20120930	<u>506.292</u>

\*assuming acceptance of this assessment report

Takara Resources Inc. (“Takara”) has acquired these claims through an option agreement with Stephen Wetherup (FMC # 141077), the current claim owner of the Big Bar Property. Takara is currently in the process of acquiring its own Free Miner’s Certificate and as such is submitting this Report on behalf of the title holder, Stephen Wetherup.

#### **4. HISTORICAL WORK**

The first record of work on the property occurred in 1979-1980, conducted by Kerr Addison Mines Ltd. Their exploration work included geological mapping, soil sampling, a 10.5km dipole-dipole Induced Polarization survey, and 2078m of drilling. The drilling was comprised of 4 diamond drill holes (for 616m) and 29 percussion drill holes (for 2078m). Intercepts from the percussion drilling was often in the range of 0.25 to 0.75g/t Au. The best intercepts from their drill program was up to 4.49 g/t Au over 3m (Assessment Report 18838), and 0.75g/t Au with 25.2 g/t Ag over 3m (Assessment Report 8142). Their work focussed on the southern end of the current property limit (the northern portion of their claim area).

In 1987-1988, Brenwest Mining optioned the property from Mingold Resources, who staked one claim in 1986 (Assessment Reports 17366, 18838 and 19303). Brenwest established a grid on the property, conducting a VLF EM and magnetic susceptibility survey, geological mapping, prospecting, 144m of trenching, and 1425m of diamond drilling in 16 holes. Anomalous Au-Ag values were intersected in most holes. The highest values were 2.12 g/t Au with 1.9 g/t Ag over 0.4m, and 0.45g/t Au and 77.4 g/t Ag over 1m (Assessment Report 18383).

In 1989, Cyprus Gold Canada took rock, silt, and soil samples for geochemistry, combined with geological mapping (Assessment Report 19303). A single grab sample (rock) yielded an anomalous gold high of 1650 ppb Au.

Rudi Durfield conducted the last recorded work programme on the Big Bar property, on behalf of Stephen G. Lehman (Assessment Report 26008). Mr. Durfield carried out a small soil, rock, and silt sampling program east of previous drilling and trenching. All soil samples were greater than 10 ppb Au, with a high of 308 ppb Au in soils samples.

## **5. GEOLOGICAL SETTING**

### **5.1 Regional Geology and Economic Setting**

Figure 3 outlines the regional geology and tectonic setting of the Interior Plateau of BC, where Big Bar is located in the southern portion of the Triassic to Jurassic Stikine terrane. The Stikine terrane is overlain by Cretaceous sedimentary and volcanic rocks, and then experienced two episodes of Tertiary magmatism: 1) Eocene volcanism known as the Kamloops Group, and 2) the Miocene plateau basalts known as the Chilcotin Group.

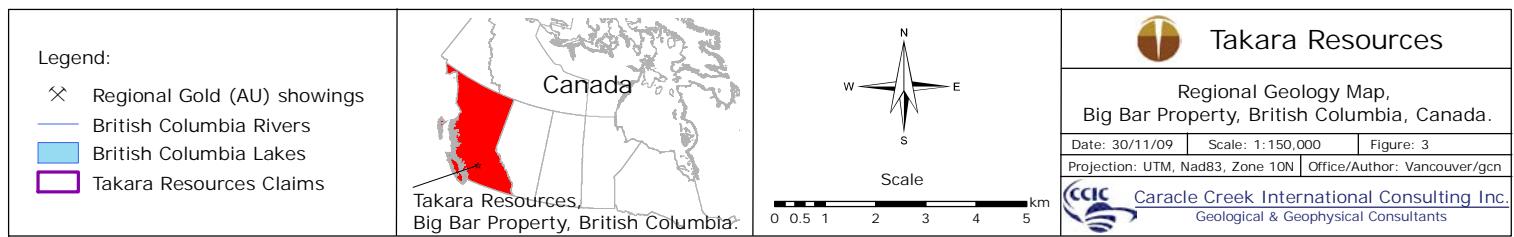

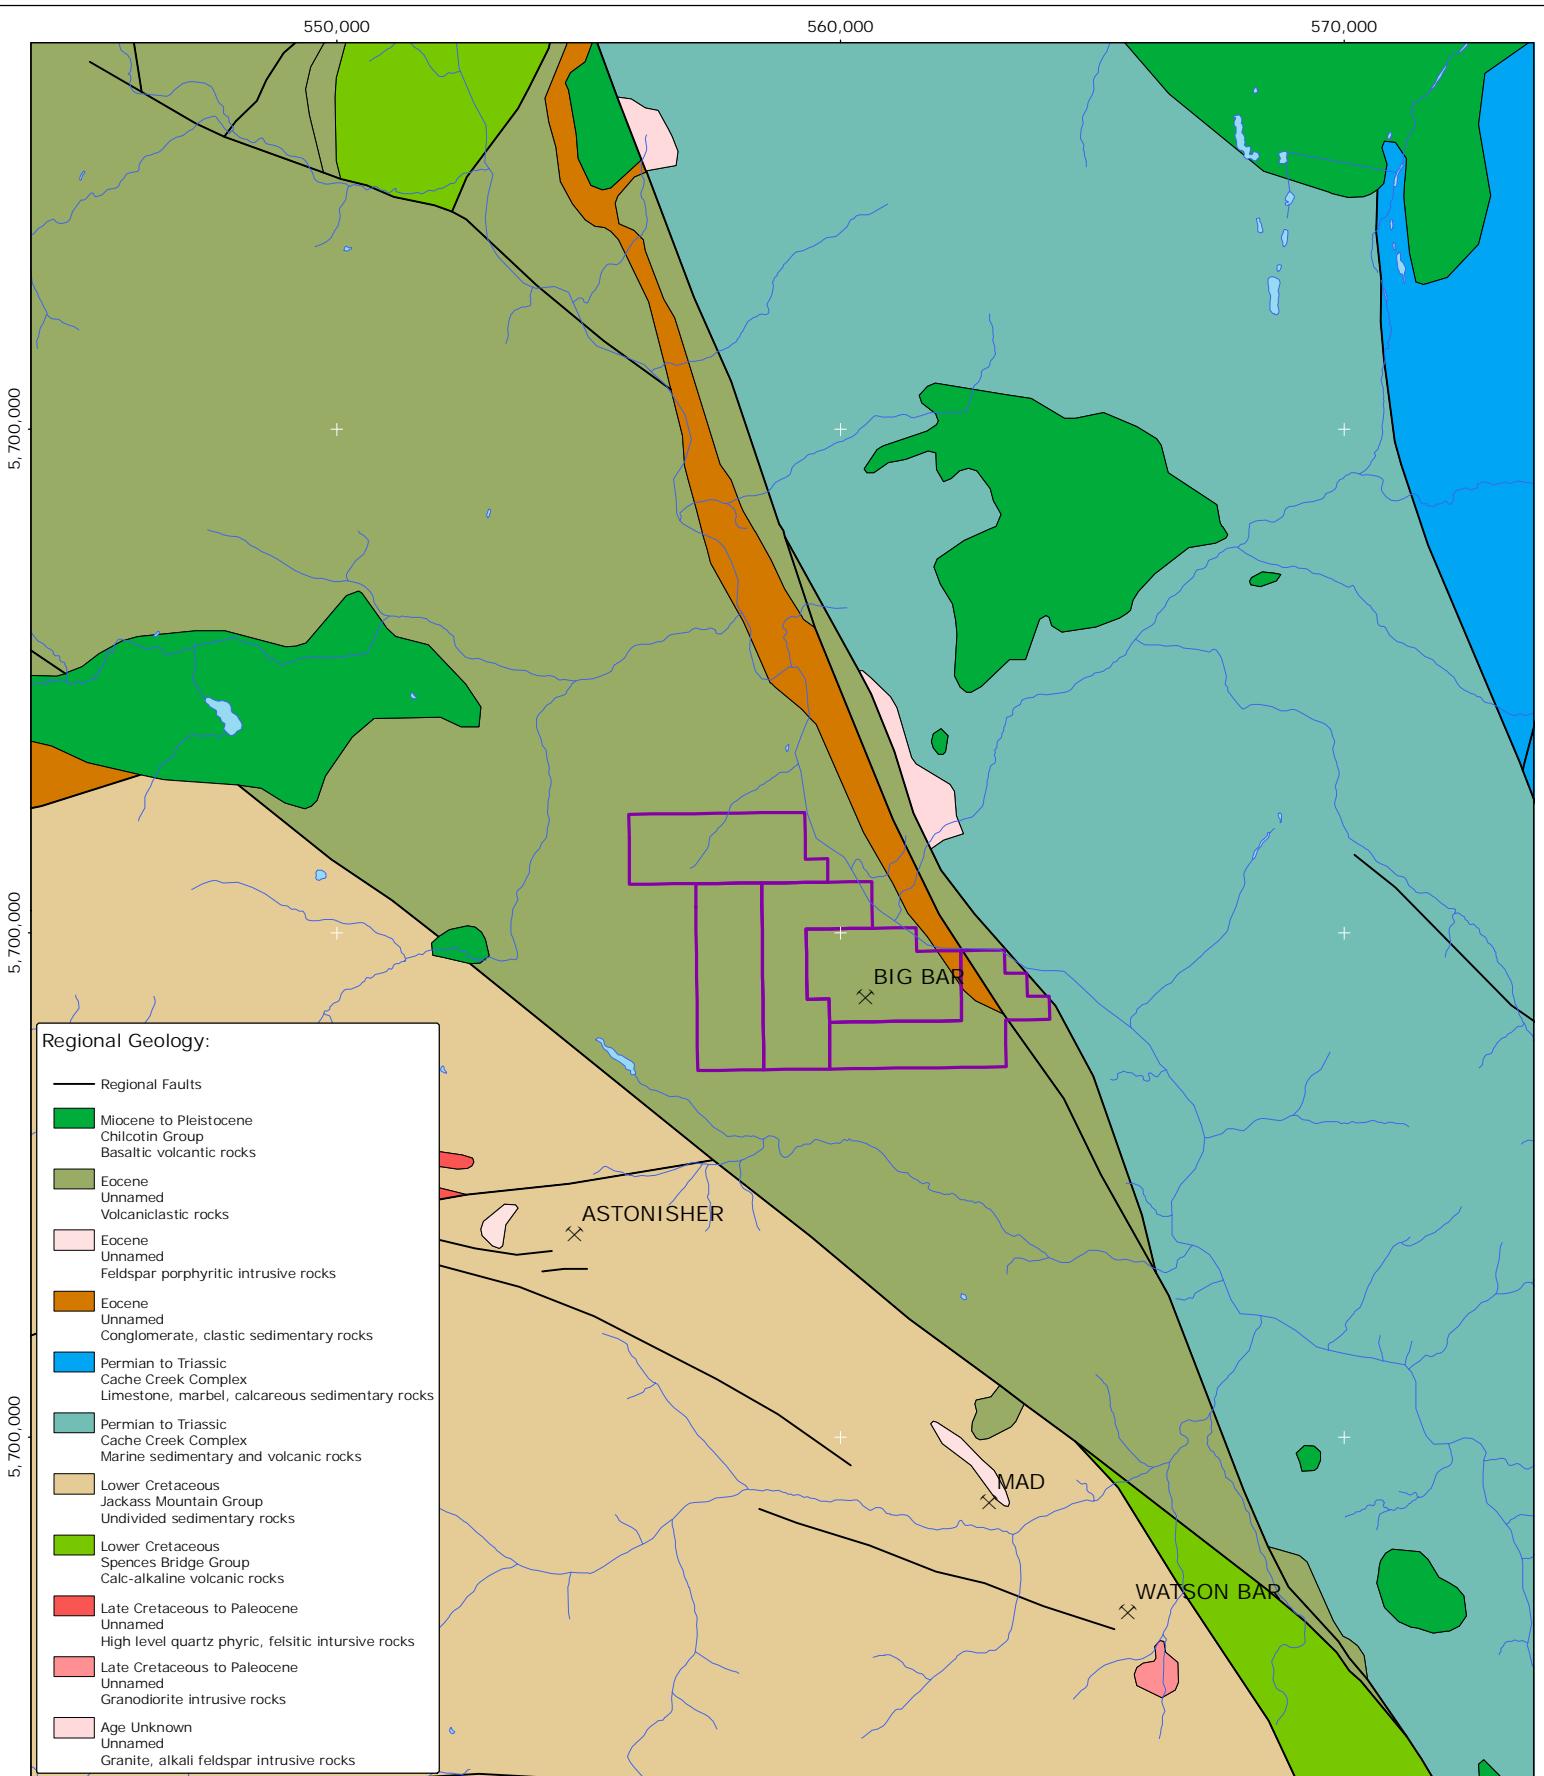

The Big Bar property, is underlain by the Cretaceous volcanic of the Kingsvale Group (massive andesite) and Eocene rhyolites and dacitic tuffs (likely Kamloops Group correlatives). The property is cut by two northwest-trending splays of the Fraser River Fault that continue to the Blackdome Mine area. The splays are related to epithermal quartz-carbonate vein systems on the property.

The Blackdome Mine is located 26km northwest from the property. It is not currently operational.

### **5.2 Property Geology and mineralization**

The property is located just west of a major N/S trending fault (the Fraser Fault), within a wedge of Eocene volcanic rocks, where it is tectonically juxtaposed with the Permian age Cache Creek formation to the east. The property is mainly underlain by the Kingsvale Group –massive upper Cretaceous andesites. However, the NW striking Edge Fault juxtaposes andesites with felsic volcanic rocks that are likely correlatives with the Kamloops Group. Rhyolites, dacitic tuffs, and significant volcanic breccias occur on the property, and are the exploration target. In some areas, alteration of felsic volcanic units show significant argillic alteration that can be attributed to epithermal alteration.

Mineralization on the property occurs mainly in vuggy, limonite-stained, quartz veins, containing pyrite, chalcopyrite with accessory sphalerite and arsenopyrite. Most veins strike north, dipping moderately to the east or west.

The Number 1 vein (assessment report 17366) yielded the highest assay in historic reports, with 2.17 g/t Au and 3.8 g/t Ag over 1.4m. The number 2 vein assayed 0.9 g/t Au and 3.0 g/t Ag (historically). The number 3 vein is continuous for 150 along strike, is 3 m wide, and extends to >65m depth. This vein assayed 1g/t Au and 45.9g/t Ag over 3m, when drilled (Assessment Report 18838).

## **6.0 2008 WORK PROGRAM**

### **6.1 Overview**

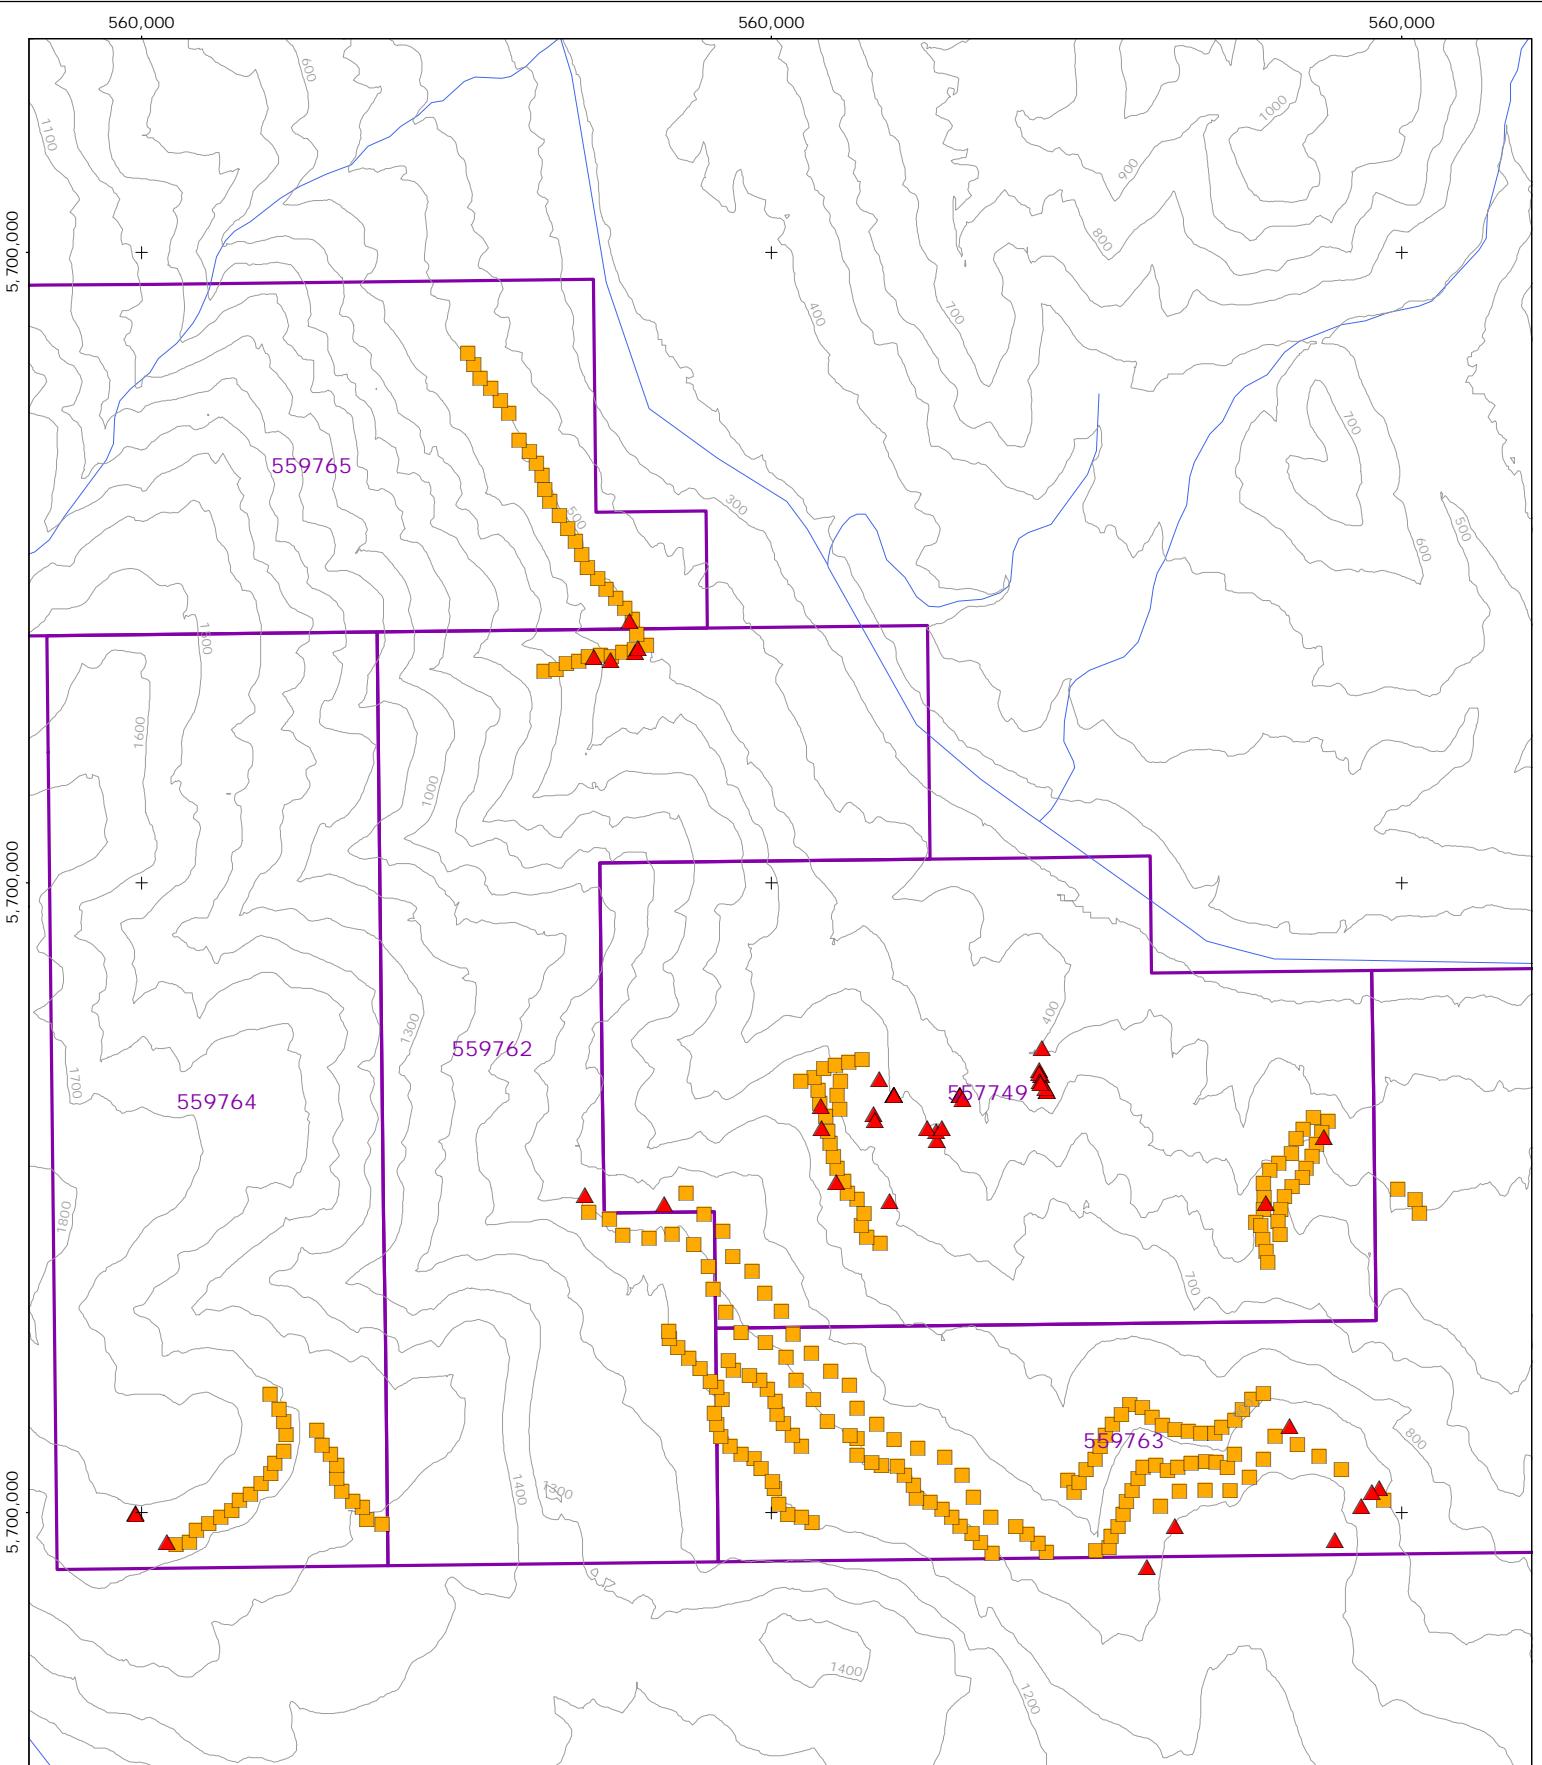

Previous exploration on the Property has mainly focussed on veins observed along the road, which have been characterized as low-sulfidation brecciated quartz, associated with moderate gold grades. Drilling on the Property has only tested an area easily accessed by a main logging road. Historical surveys indicate that several areas merit further exploration.

The 2008 work program comprised a site visit by Steve Wetherup, James Masters (for CCIC) and Julie Brown (for Takara Resources). The site visit was quickly followed by a 20 day field program of geochemical soil sampling and rock sampling. The purpose of the site visit was to devise a work program that was carried out jointly by CCIC geologists and myself, a geologist working for Takara Resources. The exploration work in this report comprises part of the planned Phase 1 of exploration on the Property (see recommendations in section 7.0). At the onset of the field season, CCIC began a detailed GIS compilation

### **6.2 Soil Geochemistry**

Geochmical soil sampling was conducted over the property, in areas that haven't previously been targeted for exploration, but which are related to observable argillic alteration, or other alteration features in bedrock or otherwise. In this sense, the sampling program was an orientation survey.

Two hundred and forty six soil samples were taken in August and September of 2008, collected by James Masters and Jeff Auston (of CCIC). Soil samples were collected every 50m or 100m, along contours as shown in Figure 4 and in Appendix 1. Soil sampling holes were dug with a

Geological & Geophysical Consultants

geo-tool to reach the `B` horizon (approximately 50 cm depth). Samples from this horizon were placed into brown paper bags, with sample numbers. Brief descriptions were recorded and soil samples were sent to Acme labs in Vancouver for 37 element ICP-MS analysis. Plan maps and assay data are present as Appendices 1 and 2 (with assay certificates in Appendix 2). Au values that occur above the 90<sup>th</sup> percentile are plotted on plan maps (in Appendix 1), with corresponding Ag values.

The highest Au value obtained from the soil sample data is 542 ppb Au, which sample also has the highest Ag yield at 400 ppb. This is the only sample with Au greater than Ag. The next highest Au value is 139.1 ppb, with 96 ppb Ag. Both of these samples were taken from the south central portion of the map area (Appendix 1, maps 6 and 7). The central portion of the map area (Appendix 1, map 13) yielded Au values of 21.7 and 10.8ppb, with related Ag running 145 and 156 ppb respectively. Other anomalous Ag values, with modest Au, include 274ppb Ag with 4.7ppb Au, 214 ppb Ag with 3.2ppb, 195 ppb Ag with 3.2 ppb Au, and 184ppb Ag with 3.8ppb Au in the central and southern claim area (Appendix 1, maps 13, 11, 7, 8).

Table 2: Statistical summary for selected elements, geochemical soil survey

Other than Au and Ag, elements that are statistically anomalous in soil data may be used to assess element mobility in soils. These are shown in Table 2. For the most part, these are chalcophile elements that are associated with economic precious metal deposits. As a first pass, this soil survey indicates bedrock mineralization to be present on the property.

### **6.3 Rock sampling**

Forty-two grab and chip samples were collected by James Masters and Jeff Auston (CCIC geologists) for geochemical analysis in August and September of 2008. Descriptions of all samples are found in Appendix 3 and full geochemical data tables with assay certificates in Appendix 4. Sample locations are given in Appendix 3, and plotted on maps in Appendix 1. All samples were analysed by Acme Analytical Laboratories (Vancouver) for 36 elements by aqua-regia and ICP-MS analysis (package 1DX) and for gold by fire assay (package G6). A summary of geochemical results for selected samples is given in Table 3.

Table 3: Summary of rock sample geochemistry for selected samples (full results in Appendix 4)

### **7.0 Discussion / Conclusions**

The highest two gold values in rock samples (samples 018 and 78723) are from sulfide-bearing andesitic volcanic rocks, with moderate to advanced argillic alteration and quartz-carbonate veins. The highest gold values (2.57 and 3.35 g/t Au) are spatially related to high Au in soils in the central portion of the map area (Appendix 1, maps 12 and 13), where ten soil samples in the vicinity yielded Au above the 90<sup>th</sup> percentile.

Rock sample analyses from outcrop in the northern portion of the claim area contain no detectable Au or Ag, (Appendix 1, Map 3, and Appendix 4) and cannot be used to account for Au and Ag soil anomalies on Maps 1 and 2. Likewise in the most western portion of the

map area, bedrock geochemistry cannot explain Au, Ag, or Cu in soils. Cu in one sample yielded >40ppm, while Cu in rock samples (upstream) ranged from 25 to 25ppm.

The Big Bar property is prospective for epithermal-style gold and silver mineralization, similar to nearby deposits, such as the (currently not operational) Blackdome mine. Further work is needed to define the extent of mineralization and related alteration to define the best targets for further exploration. The completed soil sampling program highlights the Au anomalies in the central portion of the property, which can be related to high Au values in altered andesite, in outcrop. However, anomalous gold values in soils the northern and western portions of the property cannot be explained by correspondingly anomalous values in rock samples. Additional soil sampling to complement the orientation sampling is recommended.

## **8.0 Recommendations**

**Phase 1** completed.

1. Ground truthing of historic soil and geological data (completed)
2. Geochemical soil sampling.
3. Sampling of bedrock, in particular to assess alteration (completed, requires followup)
4. Detailed structural/geological mapping and interpretation (partially complete d).
5. Geophysical survey: magnetic-VLFEM survey. To identify faults and other structures, must be constrained by bedrock geology (\*\*completed but not filed in this report).

## **TO BE COMPLETED**

6. Digitization and compilation of 2008 field program, including geophysics.

**Phase 2** recommendations:

1. Ground truth geophysics and soil sampling
2. Additional soil sampling

**Phase 3:** Drilling to be determined on the basis of previous work done in 1 and 2.

## 9.0 STATEMENT OF COSTS

## **10.0 STATEMENT OF QUALIFICATIONS**

I, Julie Brown, certify that:

- 1) I am a graduate in Geology-Biology (B.Sc. 1998) and Geology (M.Sc. 2002) from the University of Ottawa, and Earth Sciences (PhD. 2007) from the Australian National University.
- 2) I have practiced and studied within the geological profession for the past 10 years.
- 3) I am a member in good standing the American Geophysical Union.
- 4) The opinions, conclusions, and recommendations contained herein are based on observations on the Big Bar properties during a reconnaissance/prospecting visit carried out on the property by myself, and CCIC employees, Stephen Wetherup (PGeo) and James Masters. And work carried out by CCIC on behalf of Takara Resources.
- 5) I am employed by Takara Resources Inc. for the purposes of fulfilling the assessment work requirements for the Big Bar property.
- 6) I have not received, nor do I expect to receive, any interest directly or indirectly, in the Big Bar Property.
- 7) I currently have an interest in Takara Resources Inc. in the form of securities.
- 8) I am not aware of any material fact or material change with respect to the subject matter of the Report that is not reflected in the Report or the omission to disclose which makes the Report misleading.

Julie Brown, PhD

Toronto ON

December 10, 2008

I, Pamela D. Strand, Residing at 10828-126 Street, Edmonton, Alberta, Canada do hereby certify that:

1. I am the Chairperson and a Director of Takara Resources Inc. 80 Richmond St W. Suite 508, Toronto ON, M5H 2A4, Canada.
2. I am a graduate of the University of Toronto with a BSc Degree in Geology (1988) and a graduate of the University of Western Ontario, London, Ontario with an MSc in Geology (1993) and have practiced my profession continuously since 1986.
3. I am a Professional Geologist registered with APEGGA (Association of Professional Engineers, Geologists and Geophysicists), and NAPEGG and a 'Qualified Person' in relation to the subject matter of this report.
4. I have not received, nor do I expect to receive, any interest directly or indirectly, in the Big Bar Property.
5. I currently have an interest in Takara Resources Inc. in the form of securities.
6. I am not aware of any material fact or material change with respect to the subject matter of the Report that is not reflected in the Report or the omission to disclose which makes the Report misleading.
7. I have not visited the property that is the subject of this report.
8. I hereby consent to the use of this Report and my name in the preparation of a prospectus for the submission to any Provincial or Federal regulatory authority.

## CERTIFICATE OF ANALYSIS

VAN08009532.1

### CLIENT JOB INFORMATION

Project: None Given

Shipment ID:

P.O. Number

Number of Samples: 107

### SAMPLE DISPOSAL

RTRN-PLP Return

DISP-RJT Dispose of Reject After 90 days

### SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

	Method Code	Number of Samples	Code Description	Test Wgt (g)	Report Status
	SS80	106	Dry at 60C sieve 100g to -80 mesh		
	Dry at 60C	106	Dry at 60C		
	RJSV	106	Save all or part of soil reject fraction		
	1F	106	1:1:1 Aqua Regia digestion Ultratrace ICP-MS analysis	0.5	Completed
	DIS-RJT	106	Warehouse handling / Disposition of reject		

### ADDITIONAL COMMENTS

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

## CERTIFICATE OF ANALYSIS

VAN08009113.1

### CLIENT JOB INFORMATION

Project: None Given

Shipment ID:

P.O. Number

Number of Samples: 145

### SAMPLE DISPOSAL

RTRN-PLP Return

DISP-RJT Dispose of Reject After 90 days

### SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

	Method Code	Number of Samples	Code Description	Test Wgt (g)	Report Status
	No Prep	145	Sorting of samples on arrival and labeling		
	SS80	145	Dry at 60C sieve 100g to -80 mesh		
	Dry at 60C	145	Dry at 60C		
	1F	145	1:1:1 Aqua Regia digestion Ultratrace ICP-MS analysis	0.5	Completed
	RJSV	145	Save all or part of soil reject fraction		
	DIS-RJT	145	Warehouse handling / Disposition of reject		

### ADDITIONAL COMMENTS

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Caracle Creek International Consulting Inc.  
Suite 1409 - 409 Granville Street  
Vancouver BC V6C 1T2  
Canada

CC: James Masters

### APPENDIX 3

<u>Sample Number</u>	<u>Easting</u>	<u>Northing</u>	<u>Elevation (m)</u>	<u>Rock Type</u>	<u>Sulphides</u>	<u>Sulphides (%)</u>	<u>Sample Type</u>	<u>Alteration Minerals</u>	<u>Comments</u>
001	561602	5667445	1002	hematite-rich basalt	ds py	<1%	grab	chlorite, qtz/carb vns	highly fractured and fissile mafic unit, with qtz/carb veins and chloritic alteration on the SE part of the roadside outcrop.
002	561490	5667284	978	hematite-rich basalt			grab	qtz/carb stringers	Sample taken just a few meters south of claim group.
003	560469	5668738	709	andesitic			grab	chlorite, clay, some carb veinlets with lesser quartz	
004	560750	5669156	528	andesitic	ds py	<1%	chip	qtz/carb vns	highly altered, fractured and brecciated volcanic rock
005	560750	5669156	528	andesitic	ds py	<1%	chip	qtz/carb vns	highly altered, fractured and brecciated volcanic rock
006	560750	5669156	528	andesitic	ds py	<1%	chip	qtz/carb vns	highly altered, fractured and brecciated volcanic rock
007	560759	5669141	530	andesitic			chip	carb vns with lesser qtz	red and green colours to the unit may show a redox boundary
008	560658	5668978	603	andesitic			chip	minzn	2 main fabrics/faults in the unit are observed
009	560655	5669015	605	andesitic			grab		moderately magnetic in small localities
010	560620	5669025	615	andesitic	ds py	<1%	chip	qtz/carb vns	some oxidized areas to the andesite (mauve colour), redox?; unit is weakly magnetic; ~10cm wide qtz vn
011	560406	5669083	643	andesitic	ds py	<1%	chip	qtz/carb vns	
012	560412	5669058	645	andesitic	ds py	<1%	grab	qtz/carb vns, chlorite	
013	560678	5669024	595	andesitic	ds py	<1%	grab (hi-grade)	qtz/carb vns	large occurrence of calcite below
014	560428	5669220	620	andesitic			grab (hi-grade)	qtz/carb vns moderate to advanced argillic alteration, qtz/ carb vns	andesitic (light green colour) breccia, with some rusty stains and some oxidized areas to the andesite (mauve colour), redox?
015	560487	5669157	599	andesitic	ds py	<1%	grab	moderate to advanced argillic alteration, qtz/ carb vns	highly fractured unit with some sulphides, sercrite and clay minerals
016	560487	5669157	599	andesitic	ds py	<1%	grab	moderate to advanced argillic alteration, qtz/ carb vns	highly fractured unit with some sulphides, sercrite and clay minerals
017	560487	5669157	599	andesitic	ds py	<1%	grab	moderate to advanced argillic alteration, qtz/ carb vns	highly fractured unit with some sulphides, sercrite and clay minerals
018	560487	5669157	599	andesitic	ds py	<1%	grab	moderate to advanced argillic alteration, qtz/ carb vns	highly fractured unit with some sulphides, sercrite and clay minerals
019	560487	5669157	599	andesitic	ds py	<1%	grab	moderate to advanced argillic alteration, qtz/ carb vns	highly fractured unit with some sulphides, sercrite and clay minerals
020	560487	5669157	599	andesitic	ds py	<1%	grab	moderate to advanced argillic alteration, qtz/ carb vns	highly fractured unit with some sulphides, sercrite and clay minerals
021	561064	5669255	441	altered basalt	py cubes	1-2%	grab	advanced argillic alteration chlorite and biotite replacing hbl	clear contact with the alteration front and the relatively unaltered basalt
022	561072	5669234	444	altered andesite	py cubes	1%	grab		small amount of qtz/carb crystallization
023	561064	5669245	441	altered andesite	ds py	<1%	grab	clay alteration	
024	561066	5669212	431	andesitic	py cubes	15%	boulder	qtz/carb vnlts sercrite, clay minerals and	py cubes around 1mm in size very fissile, highly weathered and altered unit. alteration front in the andesite?
025	561094	5669171	452	andesitic	py cubes, ds py	5-10%	grab (hi-grade)	qtz/carb vns	less alteration than previous sample, dark green grey rock sample
026	561094	5669171	452	andesitic	py cubes	5%	grab (hi-grade)		
027	561090	5669185	450	andesitic	fg to ds py	5-10%	grab (hi-grade)	sercrite, clay minerals qtz, sercrite, and clay	calcite xtizing on fracture surfaces
028	561070	5669203	434	andesitic	py cubes	1-2%	boulder	alteration minerals qtz, sercrite, and clay	sample could be an outcrop but it is likely a large boulder.
029	561073	5669343	410	andesitic	fg to ds py	5-10%	boulder	alteration minerals biotite replacing mafic minerals, chlorite	Covered in outwash material
78191	559574	5668725	967	basalt			grab	qtz, sercrite and clay	reddish grey coloured sample taken from the hillside
78193	562413	5667596	936	andesitic	ds py	<1%	grab	minerals	getting close to an advanced argillic alteration stage

<u>Sample Number</u>	<u>Easting</u>	<u>Northing</u>	<u>Elevation (m)</u>	<u>Rock Type</u>	<u>Sulphides</u>	<u>Sulphides (%)</u>	<u>Sample Type</u>	<u>Alteration Minerals</u>	<u>Comments</u>
78231	557601	5667384	1639	andesitic			grab		fsp weathering out leaving a pitted texture, relatively unaltered unit with no visible sulphide, fine crystals with a green grey colour. The outcrop is roughly 10mX5m.
78232	557478	5667498	1689	andesitic			grab	qtz, carb, adularia and quartz	highly sheared andesite with some brecciated texture that has been smushed and sheared out. The unit also contains chert and a coloform texture is seen in areas. colofrm textured silica, along with adularia (K-rich mineral). Malachite? Weathering on the surface of the rock has a distinct light and bright green colour on the surface of the andesitic breccia boulder. The andesite has a mauve colour to it with coarser euhedral feldspar xts. coarse calcite filling in the fractures of the rock (rosettes in some instances).
78233	557476	5667496	1689	andesitic			chip		small knob of outcrop of andesite that is highly fractured and blocky. Exposed further downhill (-10m) are more green while the upper andesite unit is red to pink. The red coloured rock has areas that have been altered and have a bleacher look. Porphyritic texture with the feldspar xts in the andesite, and the unit contains no visible sulphide.
78236	562194	5668991	482	andesitic			grab	qtz/carb vns and clay mineral alteration (smectite or illite?)	heavily weathered blocky andesite. The andesitic breccia has no visible sulphide but there are some rusty brownish yellow stains. no visible sulphide and some elongate hbld xts remain, most are being replaced by biotite. Blocky rock with many qtz eyes seen throughout.
78246	561963	5668727	577	andesitic			grab		
78247	559297	5670897	629	rhyolite			grab	biotite replacing mafic minerals (hbld)	tuffaceous breccia with some flowbanding, mafic clasts ~5%. Xtl sizes are around 0.5mm, with larger quartz eyes up to 1-2 mm. large angular boulder of qtz/carb rich rhyolite with pyrite cubes throughout. Very bleached look to the rock.
78248	559362	5670883	593	rhyolite	py cubes	5%	grab	qtz and carb rich unit	the white bleached unit also contains some lesser feldspar in the large 80mX20m outcrop.
78249	559461	5670914	542	rhyolite	py cubes	3%	grab (boulder)	biotite, qtz and carb	fine grained rock with chlorite, amphibole, quartz, and feldspar with lesser qtz and epidote veinlets. 1-2m from the contact with the porphyritic andesite.
78250	559471	5670933	528	rhyolite	py cubes	<1%	grab	qtz/carb with lesser biotite	fine grained andesite with the typical light green colour. Sulphides are weathering out of the qtz/carb veins and close to the contacts of the veins. Some brecciated textures in small locations with qtz filling in the voids and fractures.
78721	560258	5668810	766	mafic to intermediate basalt	ds py	-1%	grab	qtz, chlorite, epidote	light pink andesite with larger feldspar xts. Rusty stained qtz/carb vns intrude the fractured andesite. Almost an advanced argillic alteration.
78722	560199	5669026	759	andesitic			chip (subcrop)	qtz/carb vns up to 2-3 cm wide	some small calcite vns are noted running along fractures. Large qtz eyes seen with angular feldspar.
78723	560198	5669110	750	andesitic			grab	qtz/carb vns, serecite and clay minerals	
78724	559438	5671035	504	rhyolite	ds py	2%	grab	biotite, serecite and clay minerals

## CERTIFICATE OF ANALYSIS

VAN08008913.1

### CLIENT JOB INFORMATION

Project: TAK BB

Shipment ID:

P.O. Number

Number of Samples: 29

### SAMPLE DISPOSAL

RTRN-PLP Return

DISP-RJT Dispose of Reject After 90 days

### SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Method Code	Number of Samples	Code Description	Test Wgt (g)	Report Status
R150	29	Crush, split and pulverize rock to 200 mesh		
G6	29	Fire Assay fusion Au by ICP-ES	30	Completed
1DX	29	1:1:1 Aqua Regia digestion ICP-MS analysis	0.5	Completed
DIS-RJT	29	Warehouse handling / Disposition of reject		

### ADDITIONAL COMMENTS

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Caracle Creek International Consulting Inc.

## CERTIFICATE OF ANALYSIS

VAN08009533.1

### CLIENT JOB INFORMATION

Project: None Given

Shipment ID:

P.O. Number

Number of Samples: 13

### SAMPLE DISPOSAL

RTRN-PLP Return

DISP-RJT Dispose of Reject After 90 days

### SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Method Code	Number of Samples	Code Description	Test Wgt (g)	Report Status
R150	13	Crush, split and pulverize rock to 200 mesh		
G6	13	Fire Assay fusion Au by ICP-ES	30	Completed
1DX	13	1:1:1 Aqua Regia digestion ICP-MS analysis	0.5	Completed
DIS-RJT	13	Warehouse handling / Disposition of reject		

### ADDITIONAL COMMENTS

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Caracle Creek International Consulting Inc.  
Suite 1409 - 409 Granville Street
