## **Item 1: INTRODUCTION**

Almo Capital Corp. acquired the “Nickel - Cobalt - Magnesium - Gold Property recently for cash on March 23, 2007. The “Nickel – Cobalt - Magnesium - Gold Property” was acquired for a total of \$5000, of which \$100 has been already paid, and \$4,900 is yet to be paid in due time.

Almo Capital Corp. along with Silcum Resources Ltd. and Precious metals Corp. of Vancouver, B.C jointly owns a couple of contiguous mineral claims located approximately 24 kilometers due east of the town of Hope, British Colombia known as Serp#5 and Serp#6. These claims straddle along geological structure known as the Coquihalla Serpentine Gold Belt. Geological Exploration (rock and soil sampling) were carried out over the claims on November 1 and November 23, 2008.

Hillsbar Gold Inc. recognized the potential along the belt and staked an area reported to have both gold and platinum showings. Placer gold was reported in the Serpentine Lake area and the small streams leading from the lake. Bedrock geology in the area is favorable for hosting lode or vein type gold mineralization. Similar geological environment can be found at the old Emancipation gold mine, which is located several kilometers to the northwest. Platinum placer is also reported along Sowaqua Creek. As well, the old St. Patrick workings along Sowaqua Creek are reported as a gold-platinum occurrence. It has been suggested that perhaps the source of the platinum may have originated from the serpentinized ultramafic rocks that form the Coquihalla serpentine belt. The west and east Hozameen fault systems are also potential targets such as the St. Patrick workings, which occur along the west Hozameen fault system.

Almo Capital Corp. intends to conduct systematic geological exploration program over the Serp#5 & Serp#6 mineral claims, with a view to find the source of gold, nickel, cobalt, magnesium, platinum etc. in the area.

## **Item 2: LOCATION AND ACCESS**

The Serp#5 and Serp#6 mineral claim (south group) is located approximately 24 kilometers due east of the town of Hope, British Columbia. The nickel-cobalt-magnesium-gold property is intersected by a large northwesterly flowing stream called Sowaqua Creek, a tributary of the Coquihalla River. Access to the property can easily be gained from Hope via the Coquihalla Highway Number5. The south end of the south property may be reached by taking Sowaqua creek Exit 192 and by traveling south on the Sowaqua Creek logging road until the turn off at past 16 kilometers.

In order to follow the logging road a 4-wheel drive vehicle is recommended. The boundary of the property can easily be reached within an easy one and a half-hour drive from Hope.

**FIGURE 1**

**LOCATION MAP**

*Below is a map outlining all NTS map areas that fall within the borders of British Columbia specifically showing the location of "Nickel - Cobalt - Magnesium - Gold-Property" in New Westminster mining Division of British Columbia.*

### **Item 3: MINERAL CLAIMS**

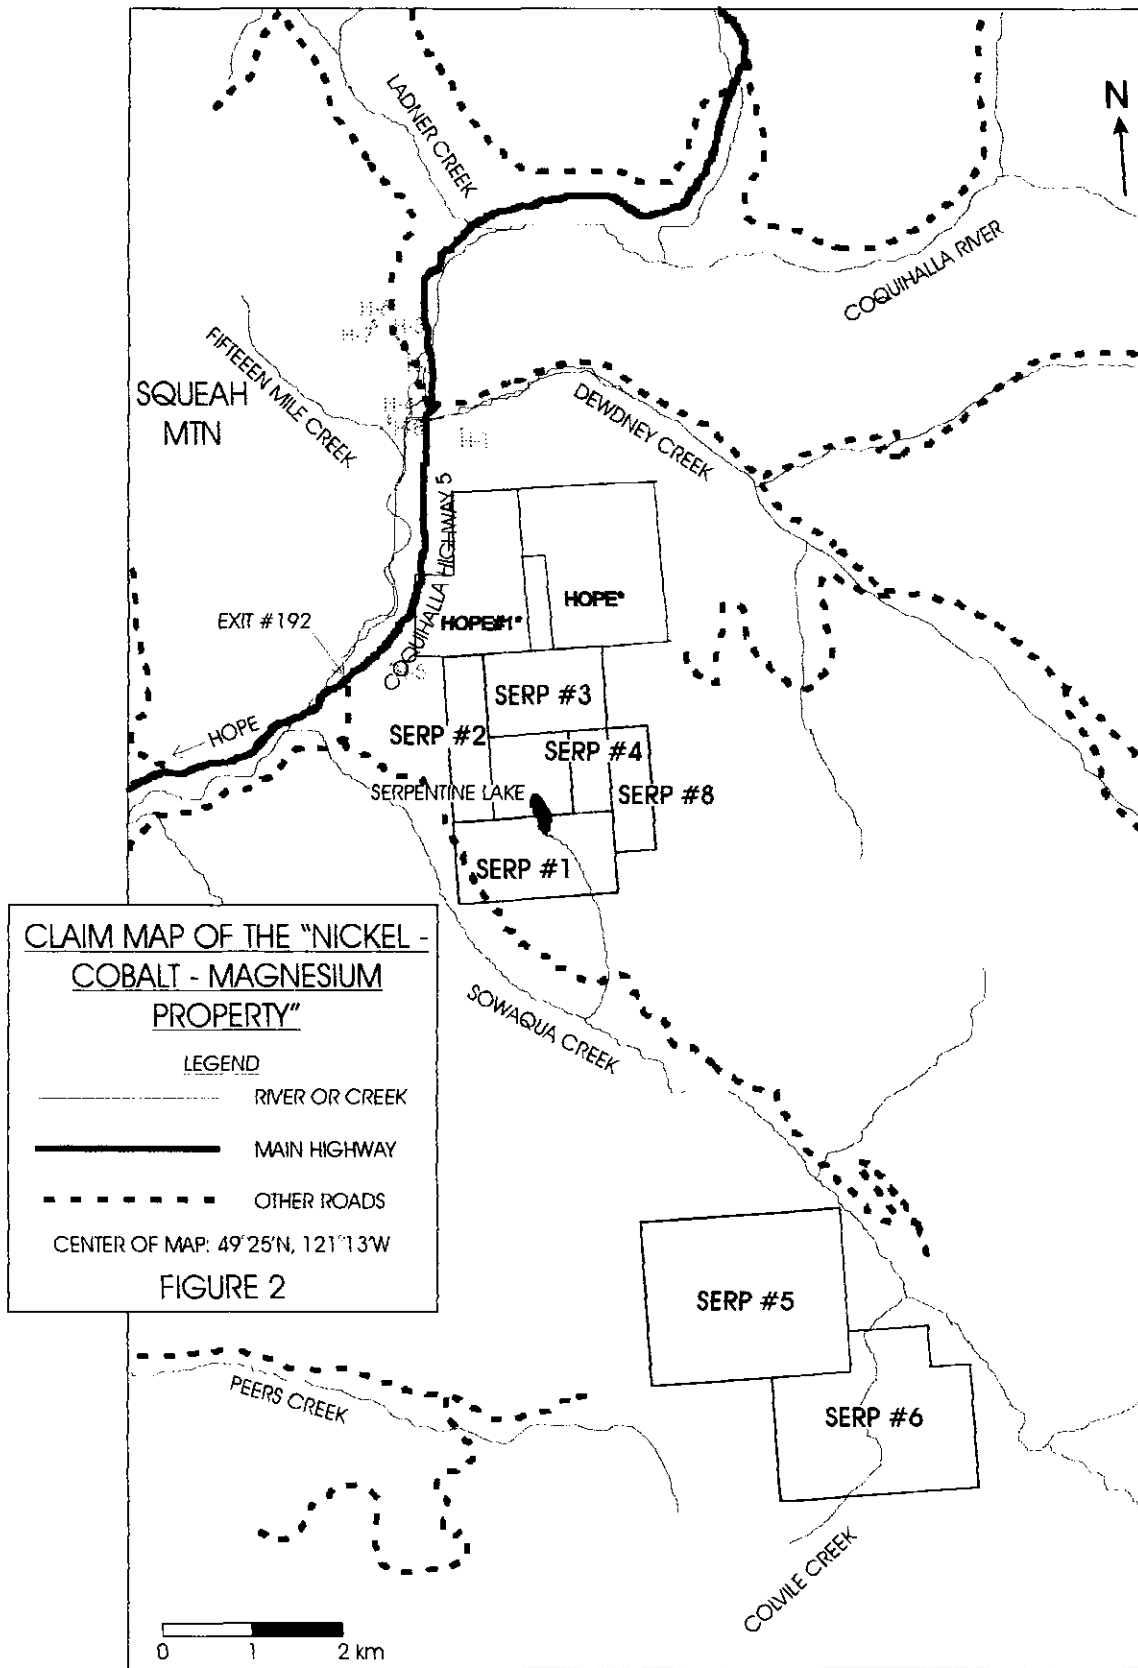

The Nickel-Cobalt-Magnesium-Gold Property covers two claims Groups, North Group, and South Group (Fig. 2). The South Group consist of Serp#5and Serp#6 mineral claims, which encompass approximately 778 hectares. The Serp#5and Serp#6 mineral claims lies under the administrative area of the New Westminster Mining Division, British Colombia on N.T.S. Grid 92H/6(E). The co-ordinates are located near the central part of the property at Latitude: 49°25' N and Longitude 121°13'W. The Serp #5and Serp #6 mineral claims are jointly held by Almo Capital Corp., Silcum Resources Ltd. and Precious metals Corp. of Vancouver, British Colombia.

According to the terms of the agreement, Almo Capital Corp. acquired an equity position of 52% in the "Nickel - Cobalt - Magnesium - Gold Property". There is a 3% NSR held by people who are in a cooperative relationship with the company. The remaining 48% of equity is also jointly held by Silcum Resources Ltd. and Precious metals Corp. who are in a cooperative relationship with Almo Capital Corp. and their interest is undivided.

The following table summarizes the pertinent claim information:

**Table 1: LIST OF MINERAL CLAIMS**

<b>Claim Name</b>	<b>Tenure Number</b>	<b>Units</b>	<b>Expiry Date</b>
Serp# 5	551500	1	November 30, 2009
Serp# 6	551503	1	November 30, 2009

**\* Mineral Claims Hope and Hope#1  
Are added to the North Group on Feb 9, 2009**

## **Item 4: GEOLOGICAL SETTING**

### **Item 4.1: REGIONAL GEOLOGY**

The regional geological setting is identified by a prominent northwest-southeast trending structure known as the Coquihalla Serpentine Belt. The belt, which is represented by a semi-continuous band of serpentine rock, is fault bounded by the East and West Hozameen faults. This geological break can be traced for at least 100 kilometers in southwestern British Columbia and it extends into northern Washington State, USA.

The belt of serpentine separates two distinct crustal units. The East Hozameen fault is in contact with an andesitic volcanic greenstone unit, the Spider Peak Formation of Early Triassic age. The greenstone forms the basement for the unconformable, overlying Jurassic to Cretaceous turbidities and successor basin deposits of the Pasayten Trough. The West Hozameen fault is in contact with the Permian to Jurassic age Hozameen Group, which consists of a dismembered ophiolite succession represented by the ultramafic rocks of the Petch Creek serpentine belt in turn, is overlain by a thick unit of greenstone and chert.

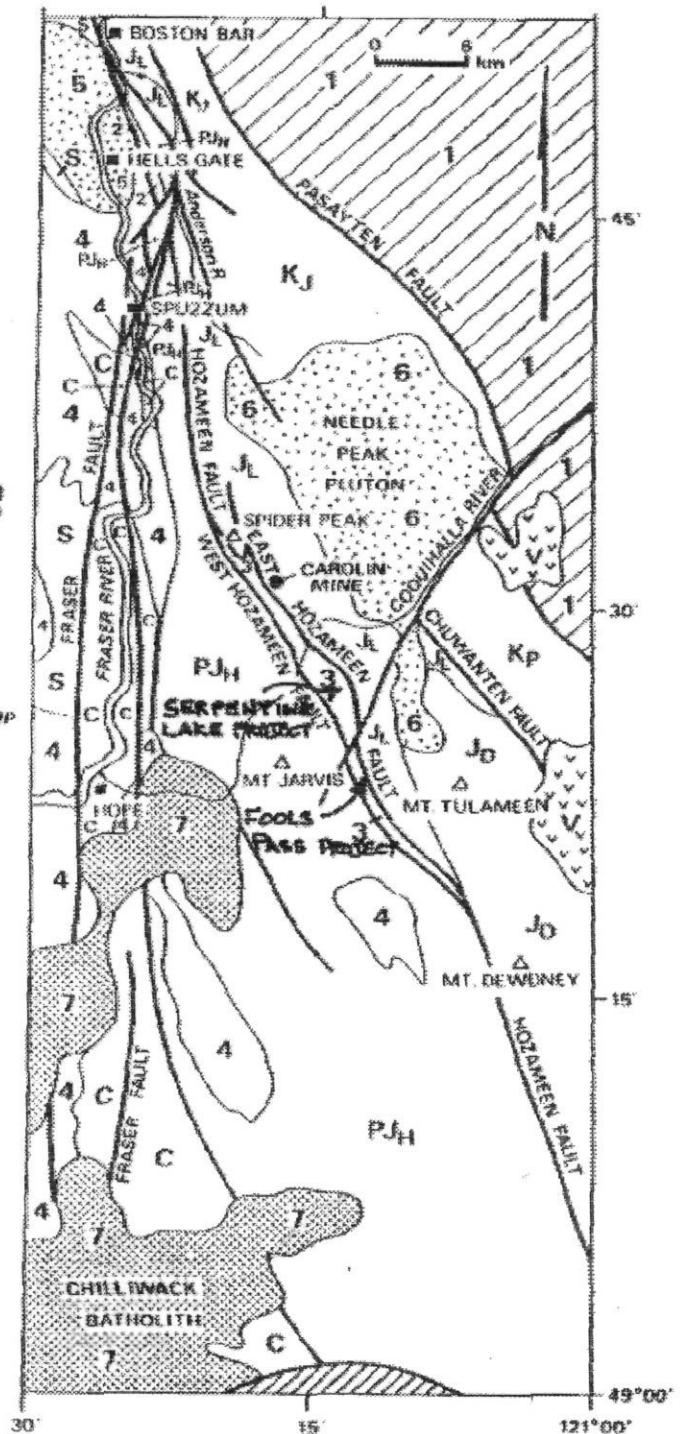

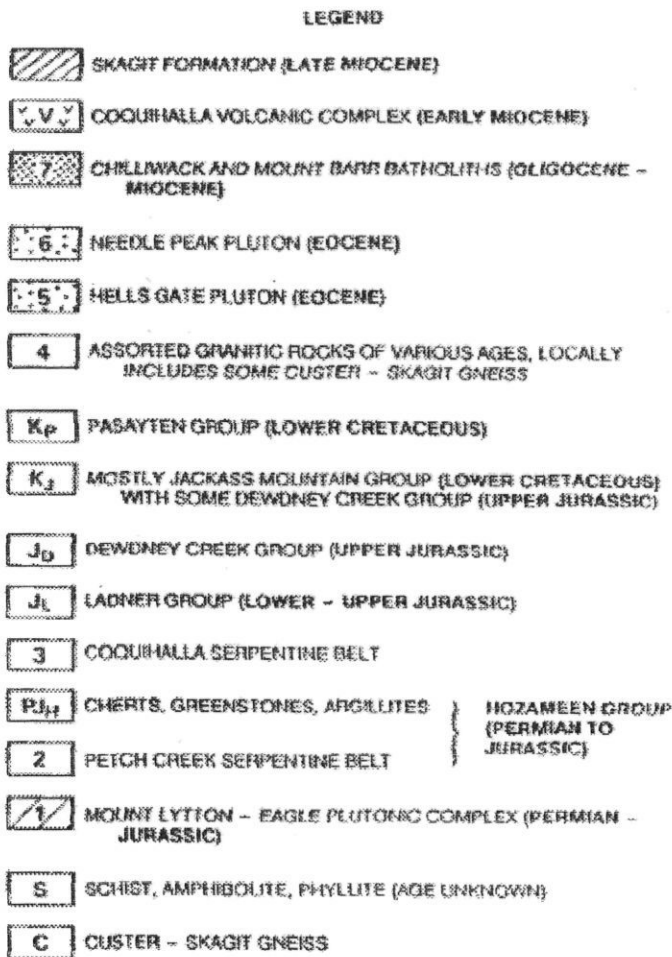

The oldest sedimentary rocks in the Pasayten Trough, the Ladner Group, contain a locally developed basal unit (e.g. conglomerate, greywacke, siltstone, and slate) that hosts the Idaho zone gold deposit (former Caroline Mines) along with a number of other former small gold producers. A series of the gold occurrences and past-producing camps occur along and immediately east of the East Hozameen fault and hosted in the Ladner sediments, which is also known as the 'Coquihalla Gold Belt'.

Some gold mineralization is hosted in greenstone volcanic such as the old Emancipation mine as well as in other rock types including a suite of small sodic felsic porphyry intrusions at Siwash Creek forks old ward mine.

There is potential for additional discoveries of precious metal mineralization along the Coquihalla gold belt. For example, the reported placer gold near Serpentine Lake may be locally derived possibly from greenstone volcanic that occur in the area, similar to the geological setting as the former Emancipation mine. As well as the reported occurrence of placer platinum in Sowaqua Creek and the reported gold-platinum workings of the old St. Patrick, this raises intriguing possibilities that the Coquihalla serpentine belt could be an exploration target for platinum-group elements.

# REGIONAL GEOLOGY MAP

FIGURE 3

## **Item 4.2 PROPERTY GEOLOGY**

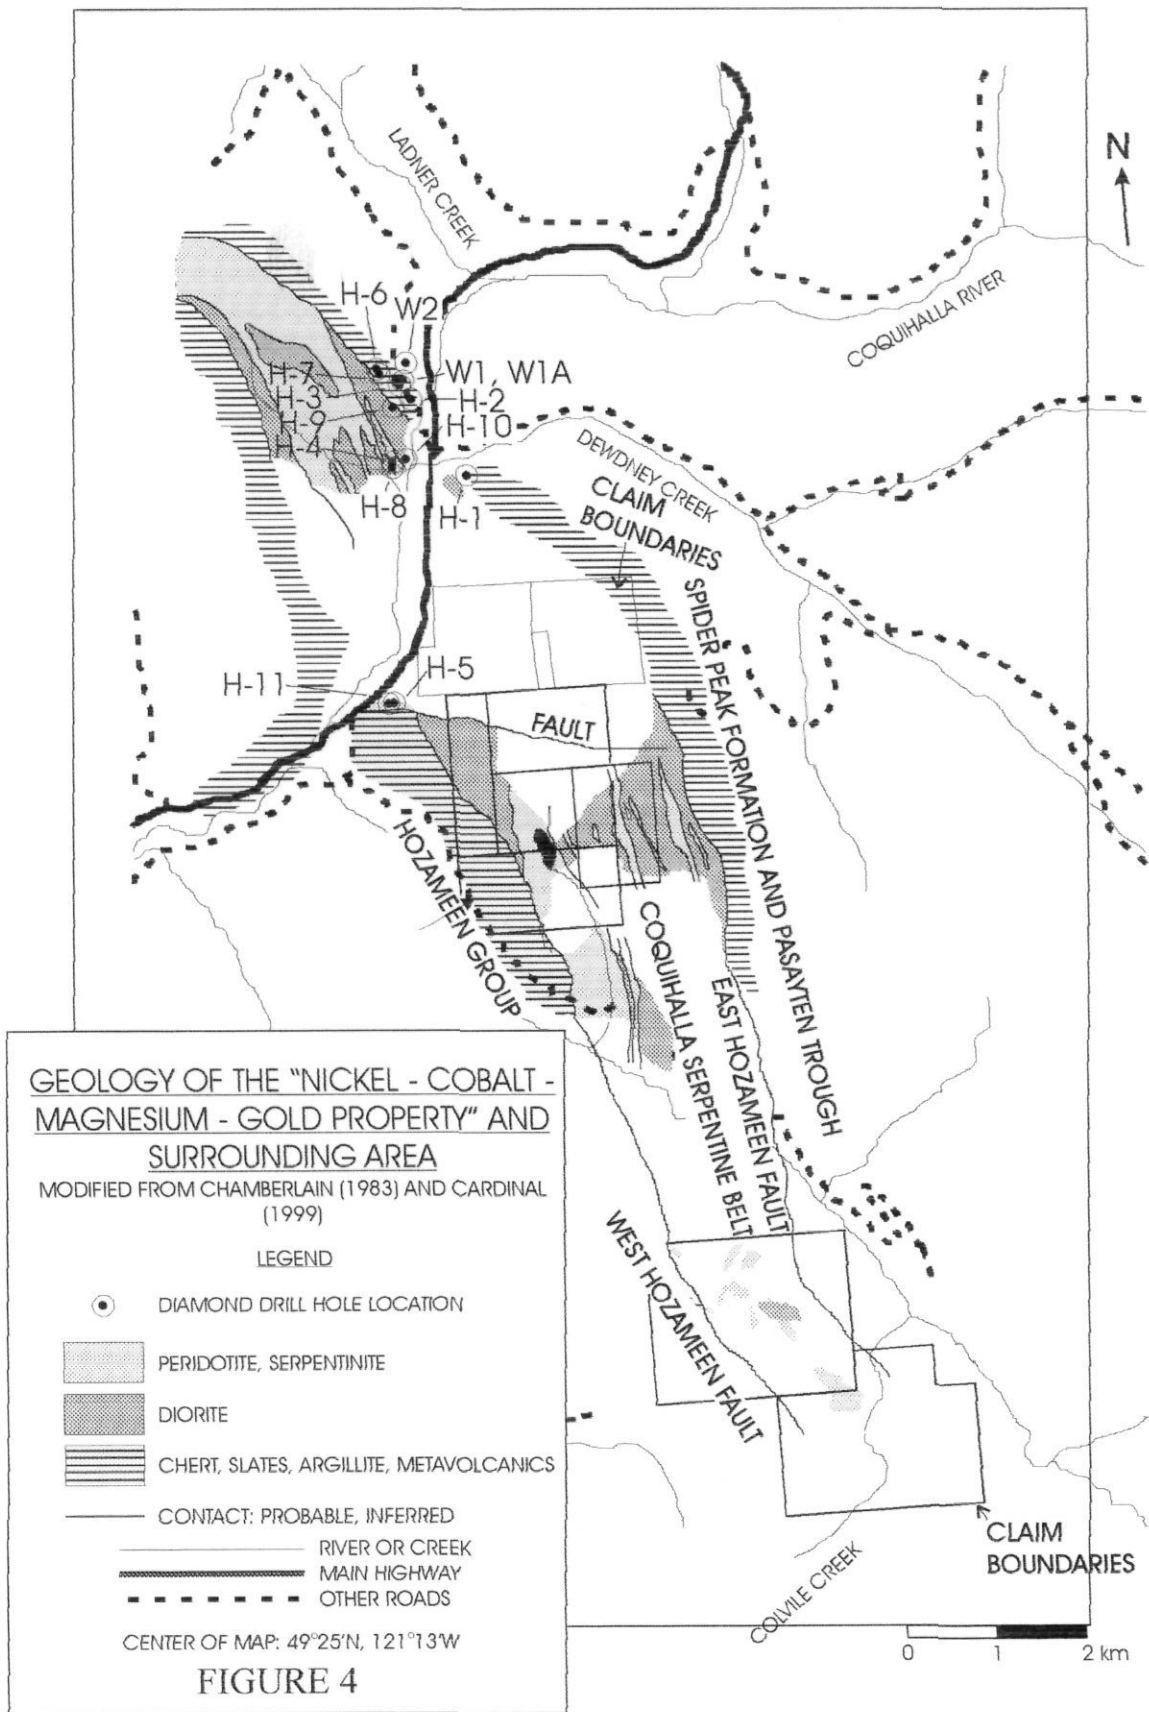

There are 3 main rock types that underlie the Serp#5 and Serp#6 mineral claims, which includes chert and cherty argillites of the Hozameen Group, serpentine, greenstone volcanics of the Spider Peak formation and, siltstone, argillite and slate of the Ladner Group formation.

The serpentine is the prominent rock type underlying approximately 1/4 of the claims and forms a continuous belt striking northwest southeast. It is well exposed in a plateau-like area on Serp#5 mineral claims where it is at least 1.5 kilometers wide. The area forms the summit of the claims at an elevation of at least thousand meters. Glaciations have produced poor drainage with marshes and ponds as well as, ridges of polished-striated bedrock.

Serpentine Rock is exposed to the northeast and in contact with the volcanic is a northwest striking, steeply dipping siltstone. The serpentine and greenstone volcanics is in fault contact marking the East Hozameen fault. At the North portion of the South Property, the West Hozameen fault can be observed and which defines the contact between serpentine and cherty argillites of the Hozameen group.

Minor disseminated pyrite and Pyrrhotite mineralization was observed with the volcanics. The serpentine is usually massive with no crystal structure and is commonly associated with disseminated magnetite.

Structurally, all rock units observed in this area strike northwest and are steeply dipping. Foliation is also concordant with northwest southeast trending faults. Several ancillary faults cut the serpentine and greenstone, paralleling the east and west Hozameen fault systems.

## **Item 5: FIELD PROCEDURES**

Author along with two geologists and a driver carried out the soil and rock sampling survey on (1 November & 23 November 2008). The author drove from Hope via Coquihalla Highway Number 5. The south end of the "Nickel-Cobalt-Magnesium-Gold Property" South Group may be reached by taking Sowaqua creek Exit 192 and by traveling south on the Sowaqua Creek logging road until the turn off at past 16 kilometers. In order to follow the logging road a 4-wheel drive vehicle was used. The property can easily be reached within an easy one and a half-hour drive from Hope. 1:20,000 topographic maps, obtained from the local forestry services were used for navigation. Hip chain, brunton compass, and GPS were used in the sampling surveys.

Much of the area was surveyed; Soil samples were collected randomly along the logging road from the upper "B" (rusty) soil horizon where possible (on geological considerations). Hand tools were used; the samples were placed in standard craft paper bags, and marked with UTM co-ordinates. At the close of the project, the samples were boxed and shipped to Acme Labs Ltd., of Vancouver, B.C., where analysis for Gold, Nickel, Cobalt, Magnesium, Chromium and Platinum. and other elements were conducted and forms a part of this report.

## **Item 6 Sampling and Geo-chemical analysis**

Details of samples collected on 1<sup>st</sup> and 23<sup>rd</sup> of November 2008 (Soil and Rock samples)

Samples collected by: Geologist Amit Kumar M.Sc.  
And Geologist Uma Shankar. M.Sc

<b>SAMPLE CODE</b>	<b>SAMPLE ID</b>	<b>UTM LOCATION</b>	<b>COLOR</b>	<b>VISIBLE PROPERTIES</b>
UA1	52225	0631511 5469687	Greenish Grey	Fine grained compact rock.
UA2	52226	0631125 5469852	Light Green	Light green colour serpentine rock with fibrous texture.
UA3	52227	0630788 5469884	Dark Grey	Fine grained compact intrusive rock with minute quartz veins.
SMR1	52228	0630765 5470815	Black	Black fine-grained compact rock with lenses of serpentine.
SMR2	52229	0630813 5471077	Grey	Grey fine-grained compact rock with reddish brown oxidized bands.
SMR3	52230	0630755 5471150	Grey	Grey fine-grained compact rock with reddish brown oxidized bands.

The geological soil and rock sampling was done on the property to find the major elements of interest in the property. A total of 19 soil samples and six rock samples were collected in the field and were later geochemically analyzed for Gold, Copper, Nickel, Cobalt, Magnesium, Chromium, Manganese, and Zinc etc

Figure 5 and 6 illustrate geochemical results for soil and rock samples as obtained from Acme Lab. of Vancouver and forms a part of this report.

## METHODS AND SPECIFICATIONS FOR ANALYTICAL PACKAGE GROUP 1E & 1EX – ICP & ICP-MS ANALYSIS – 4-ACID DIGESTION

### Analytical Process

### Comments

#### Sample Preparation

All samples are dried at 60°C. Soil and sediment are sieved to -80 mesh (-180 µm). Moss-mats are disaggregated then sieved to yield -80 mesh sediment. Vegetation is pulverized or ashed (475°C). Rock and drill core is jaw crushed to 70% passing 10 mesh (2 mm), a 250 g riffle split is then pulverized to 85% passing 200 mesh (75 µm) in a mild-steel ring-and-puck mill. Pulp splits of 0.25 g are weighed into Teflon test tubes.

#### Sample Digestion

A 10 mL aliquot of the acid solution (2:2:1:1 H<sub>2</sub>O-HF-HClO<sub>4</sub>-HNO<sub>3</sub>) is added, heated until fuming on a hot plate and taken to dryness. A 4 mL aliquot of 50% HCl is added to the residue and heated using a mixing hot block. After cooling the solutions are transferred to polypropylene test-tubes and made to a 10 mL volume with 5% HCl.

#### Sample Analysis

**Group 1E:** solutions aspirated into a Spectro Ciros Vision or Varian 735 ICP emission spectrometer are analysed for 35 elements: Ag, Al, As, Au, Ba, Be, Bi, Ca, Cd, Co, Cr, Cu, Fe, K, La, Mg, Mn, Mo, Na, Nb, Ni, P, Pb, Sb, Sc, Sn, Sr, Th, Ti, U, V, W, Y, Zn and Zr.

**Group 1EX:** solutions aspirated into a Perkin Elmer Elan 6000 or 9000 ICP mass spectrometer are analysed for 41 elements: Ag, Al, As, Au, Ba, Be, Bi, Ca, Cd, Ce, Co, Cr, Cu, Fe, Hf, K, La, Li, Mg, Mn, Mo, Na, Nb, Ni, P, Pb, Rb, S, Sb, Sc, Sn, Sr, Ta, Th, Ti, U, V, W, Y, Zn and Zr.

#### Quality Control and Data Verification

QA/QC protocol incorporates a sample-prep blank (G-1) as the first sample in the job which is carried through all stages of preparation to analysis. An Analytical Batch comprises 36 client samples and incorporates a pulp duplicate to monitor analytical precision, a -10 mesh rejects duplicate to monitor sub-sampling variation (drill core only), a reagent blank to measure background and aliquots of Certified or in-house Reference Material like STD DST6, Oreas 24P or Oreas 45P. Data undergoes a final verification by a British Columbia Certified Assayer who then validates results before it is released to the client.

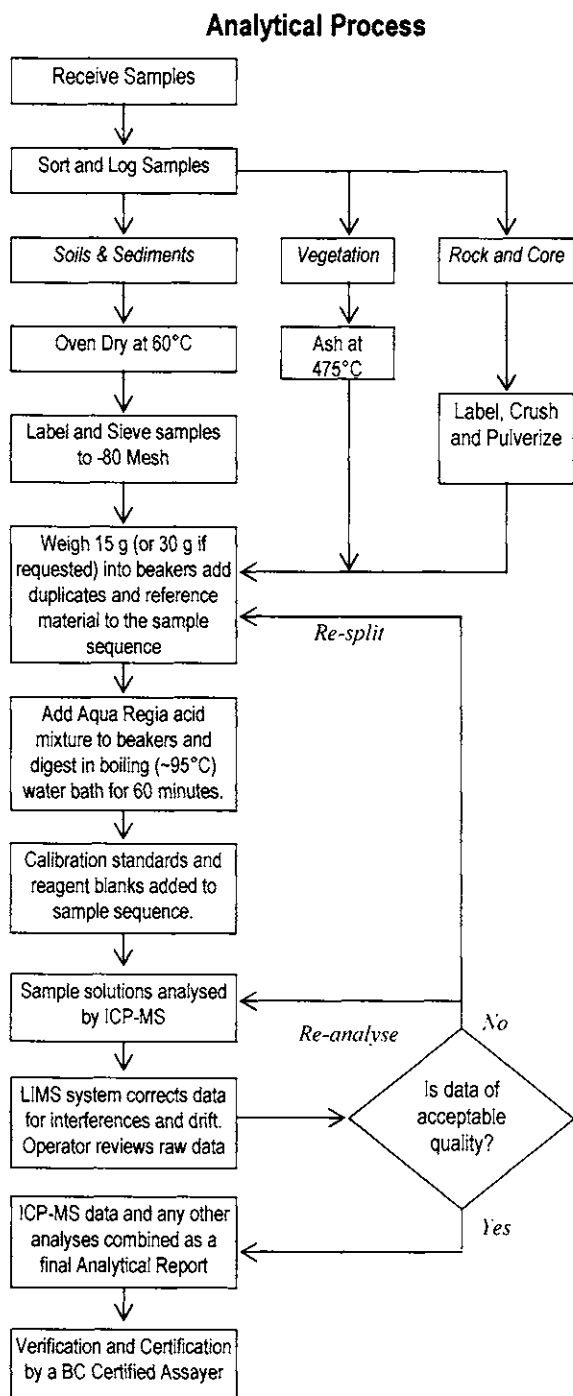

## GROUP 1E AND 1EX - ICP ANALYSIS – 4-ACID DIGESTION

	Group 1E Detection	Group 1EX Detection	Upper Limit
Ag	0.5 ppm	0.1 ppm	200 ppm

Ta*	-	0.1 ppm	2000 ppm
Th	2 ppm	0.1 ppm	4000 ppm
Ti	0.01 %	0.001 %	10 %
U	20 ppm	0.1 ppm	4000 ppm
V	2 ppm	1 ppm	10000 ppm
W*	4 ppm	0.1 ppm	200 ppm
Y	2 ppm	0.1 ppm	2000 ppm
Zn	2 ppm	1 ppm	10000 ppm
Zr*	2 ppm	0.1 ppm	2000 ppm

\*The digestion is only for some Cr and Ba minerals and some oxides of Al, Hf, Mn, Sn, Ta, Zr.

^Volatilization during fuming may result in some loss of As, Sb, and Au.

## METHODS AND SPECIFICATIONS FOR ANALYTICAL PACKAGE GROUP 3A - AU BY WET EXTRACTION

### Comments

#### Sample Preparation

All samples are dried at 60°C. Soil and sediment are sieved to -80 mesh (-180 µm). Moss-mats are disaggregated then sieved to yield -80 mesh sediment. Vegetation is pulverized or ashed (475°C). Rock and drill core is jaw crushed to 70% passing 10 mesh (2 mm), a 250 g riffle split is then pulverized to 85% passing 200 mesh (75 µm) in a mild-steel ring-and-puck mill. Pulp splits of 15 and 30 g splits are weighed into beakers.

#### Sample Digestion

A modified Aqua Regia solution of equal parts concentrated ACS grade HCl and HNO<sub>3</sub> and de-mineralised H<sub>2</sub>O is added to each sample to leach for one hour in a hot water bath (>95°C). After cooling the solution is made up to final volume with 5% HCl. Sample weight to solution volume is 1 g per 20 mL.

#### Sample Analysis

Solutions are aspirated into a Perkin Elmer Elan 6000 or 9000 ICP mass spectrometer for the determination of Au.

#### Quality Control and Data Verification

QA/QC protocol incorporates a sample-prep blank (G-1) as the first sample in the job which is carried through all stages of preparation to analysis. An Analytical Batch comprises 36 client samples and incorporates a pulp duplicate to monitor analytical precision, a -10 mesh rejects duplicate to monitor sub-sampling variation (drill core only), a reagent blank to measure background and aliquots of Certified or in-house Reference Material like STD DS7 or Rocklabs STD OxD57. Data undergoes a final verification by a British Columbia Certified Assayer who then validates results before it is released to the client.

**GROUP 3A AU BY WET DIGESTION**

Element	Detection Limits	Upper Limits
Au	0.5 ppb	10 ppm
Pt	2 ppb	10ppm
Pd	10 ppb	10 ppm

## **Item 7: CONCLUSION**

The geological soil and rock sampling was done on the property to find the major elements in the property. A total of 19 soil samples and six rock samples are geochemically analyzed for Gold, Copper, Nickel, Cobalt, Magnesium, Chromium, Manganese, and Zinc etc

Geochemical results of soil samples shows Gold values up to 107.90ppb, Copper values up to 44.4ppm, Zinc values up to 115ppm, Nickel values up to 1098ppm, Cobalt values up to 60.80ppm, Manganese values up to 1634ppm, Chromium values up to 1330ppm, and Magnesium values up to 9.32%

Geochemical results of rock samples shows the Gold values up to 3.4ppb, Copper values up to 58.8ppm, Zinc values up to 101ppm, Nickel values up to 2373ppm, Cobalt values up to 97.20ppm, Manganese values up to 1805ppm, Chromium values up to 1681ppm, and Magnesium values up to 22.23%

The Geochemical results of the Nickel-Cobalt- Magnesium-Gold Property indicates that this area is a good prospect of Gold, Copper, Nickel, Cobalt, Magnesium, Chromium, Manganese, Zinc etc. Future surveys in the area should be orientated toward heavy metal sampling and detail examination of the serpentine and associated diorite intrusive including the greenstone Volcanics and fault contact structures.

## **Item 8: COST STATEMENT OF EXPLORATION**

Costs of Exploration on the south group claims of Nickel-Cobalt-Magnesium-Gold Property.

Cash in lieu Spent on property from Feb 8 <sup>th</sup> to Oct 13 <sup>th</sup>	\$ 3,002.92
Geologist fee (for 1 <sup>st</sup> November & 23 <sup>rd</sup> November) @\$35/hr	\$ 2,835.00
Transport, vehicle rentals and Gas expenses	\$ 556.08
Expenditure on food supplies and Utilities	<u>\$ 424.00</u>
Total Expenditure (already Incurred)	<u>\$ 6,817.92</u>

## **Item 9: Statement of Authors Qualifications**

I, Ram Vallabh, of 603 East 30<sup>th</sup> Avenue, Vancouver, British Columbia, Canada V5V 2V7, hereby certify that:

1. I am a graduate and post graduate from, University of Lucknow, India, B.Sc. in 1952, L.L.B. in 1955, and M.Sc. in 1957, both B.Sc. and M.Sc. Degrees are in Geology.
2. I am the registered owner of mineral claims held under Almo Capital Corp.
3. I had practiced geology for more than forty years in Canada.
4. This report is based on assessment, government, and private reports listed in the references, and personal field examination.
5. I am a qualified person.
6. The assessment report has been prepared in conformity of Canadian mining industry practice.

Dated at Vancouver: February 27, 2009

www.acmelab.com

**Client:** **Almo Capital Corp.**  
 603 E. 30th Ave  
 Vancouver BC V5V 2V7 Canada

Submitted By: Ram Vallabh  
 Receiving Lab: Canada-Vancouver  
 Received: January 23, 2009  
 Report Date: February 09, 2009  
 Page: 1 of 2

**CERTIFICATE OF ANALYSIS**

**VAN09000204.1**

**CLIENT JOB INFORMATION**

Project: II North and South  
 Shipment ID:  
 P.O. Number  
 Number of Samples: 24

**SAMPLE DISPOSAL**

RTRN-PLP Return  
 RTRN-RJT Return

**SAMPLE PREPARATION AND ANALYTICAL PROCEDURES**

Method Code	Number of Samples	Code Description	Test Wgt (g)	Report Status
Soil Pulverize	24	Soil Pulverize		
GEO6	24	Group 3A Au (15 gm) + Group 1EX	15	Completed

**ADDITIONAL COMMENTS**

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: **Almo Capital Corp.**  
 603 E. 30th Ave  
 Vancouver BC V5V 2V7  
 Canada

CC:

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. \*\*\* asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

Submitted By: Ram Vallabh  
Receiving Lab: Canada-Vancouver  
Received: January 23, 2009  
Report Date: February 19, 2009  
Page: 1 of 2

**CERTIFICATE OF ANALYSIS**

**VAN09000205.1**

**CLIENT JOB INFORMATION**

Project: II North and South  
Shipment ID:  
P.O. Number  
Number of Samples: 10

**SAMPLE PREPARATION AND ANALYTICAL PROCEDURES**

Method Code	Number of Samples	Code Description	Test Wgt (g)	Report Status
R150	10	Crush, split and pulverize rock to 200 mesh		
GEO6	10	Group 3A Au ignited (15 gm) + Group 1EX	15	Completed

**SAMPLE DISPOSAL**

RTRN-PLP Return  
RTRN-RJT Return

**ADDITIONAL COMMENTS**

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: **Almo Capital Corp.**  
603 E. 30th Ave  
Vancouver BC V5V 2V7  
Canada
