Introduction

The Sowaqua 1 mineral claim, tenure # 579003, a one cell claim, comprising 21.02 hectares, is situate approximately 14 kilometers east northeast of Hope, along Sowaqua Creek, a northwesterly flowing tributary of the Coquihalla River. The claim lies in the Cascade Mountains, along the Coquahalla Gold Belt. The Hozameen Fault, a mineralized northwest-trending serpentine belt, which extends from the Boston Bar area in the north, to well within Washington State, in the south, cuts through the center of the property. To the west of the fault, the underlying geology comprises ultramafic rocks, while to the east lies mudstone, silt stone, shale and fine clastic sedimentary rocks. The general area is well notarized for hosting gold-bearing mineralization, with the past producing Carolin Mine and Emancipation Mine lying to the north-northwest. The claim was staked on March 23, 2008, to explore for gold mineralization. Elevations over the claim ranges from 540m at the southwest corner of the tenure, to 820m at the northeast corner, and is conducive to prospecting for approximately five to six months out of the year, generally commencing in May to early June.

Location & Access

The Sowaqua 1 claim is centrally situate on coordinate 121° 13' 00.7" W Longitude, 49° 24' 36.9" N Latitude. Access to the property is gained via the Sowaqua Creek Forest Service Road, a seasonally-good two-lane gravel road, leaving BC Highway #5 at Exit 192 (Sowaqua Creek Exit), fifteen kilometers north of the BC Highway #3 intersect. The FSR meanders through the southern portion of the claim, offering relatively good access.

Summary

On August 10, 2008, prospecting was carried out on the Sowaqua 1 (579003) property, over the traverses shown on Map 2, hereto attached. Prospecting commenced from the most-western point of the noted traverse, examining the embankment along the roadway and periodically dry panning loose ditch sediments for signs of float material, while also inspecting the few outcrops encountered. A brief climb was then engaged to attain a better view of a land feature above the roadway, thence a short traverse was made immediately below the roadway, to investigate what appeared to be a few outcrops obscured from normal view when driving the road.

Conclusion

Though difficult to actually tell, even under a 10x loupe, from the dry panning there appeared to be two extremely small particles of silvery-gray metallic substance, however, the effort failed to produce any showing of gold. On several occasions over the entire traverse, specimens were chipped from parent material, and examined, but none appeared to bear geology of interest. It was felt further assessment should be extended to this property, and thus, the tenure was renewed for a successive term.

Work Evaluation & Cost Statement

-- 4.0 Man Hours Prospecting --

Labor – Larry Amey..... August 10, 2008	4.00 hours	\$ 80.00
Meal Costs		\$ 14.70
	Sub Total	\$ 94.70
Allowable Vehicle Expenses (20%)		\$ 18.94
Report Preparation		\$ 40.00
	Total	\$ 153.64

Attending Party & Qualifications:

Larry Amey -- 29 years prospecting experience

This Report has been prepared for, and on behalf of, Sarah Della Lila Amey (FMC 206187), title holder of the Sowaqua 1 (579003) mineral claim.
