1.0 Introduction

On November 9, 2007, Hawthorne Gold Corporation and Cusac Gold Mines Ltd. ("Cusac") entered into a merger agreement whereby the two companies would continue to operate under the corporate entity of Hawthorne Gold Corporation ("Hawthorne"). Hawthorne became the owner and operator of Cusac's Table Mountain and Taurus properties that total 15,629 hectares (38,620 acres) of mineral claims. Through the merger, Hawthorne acquired an additional 915 hectares (2,261 acres) of mineral claims contiguous with the Taurus Property through option agreement with American Bonanza Gold Corporation. The entirety of this land package became known as the Cassiar Gold property. The merger was completed on April 15, 2008.

On March 25, 2008, Hawthorne announced the staking of approximately 37,123 hectares (91,733 acres) of mineral claims surrounding the Cassiar Gold Property. The newly staked claims increased the previous land package to 53,667 hectares (132,614 acres).

The Table Mountain project areas contain the historic Erickson Gold Mines mine-site located adjacent to the southern shores of McDame Lake, historic underground workings at the Main Mine area along Erickson Creek, historical portals used to mine and access the Vollaug vein on top of Table Mountain and east of the Main Mine, and the Cusac and Bain Portals approximately 8 kilometers south of the Main Mine. The Table Mountain project areas are known to host narrow quartz-veins with high-grade gold. Currently, the East Bain deposit hosts a minable indicated resource of 13,708 ounces gold at 0.62 opt gold in 22,157 tons. An additional inferred resource of 4,717 ounces gold at 3.70 opt gold in 1,276 tons is suggested[1]. No other mineral resource is currently defined on the Table Mountain project area.

The Taurus project areas is approximately 6 kilometers north of the Main Mine and contain the historic Taurus-Hearn, Sable, and Plaza portals and underground workings. The project area also contains current exploration areas (such as 88 Hill, 88 Hill West, and HWY Zone). The Taurus project areas are known to host very narrow quartz-vein sets and shear zones with moderate grade gold to high grade gold. The majority of the deposit is low grade gold contained in sulphide mineralized zones and extensional veins within wall rock. Overall, the Taurus project area is perceived as a low grade bulk tonnage deposit with an inferred mineral resource of 1,040,886 ounces of gold at 1 gpt contained within 32,386,000 tonnes[2].

The intent of the 2009 exploration year was to reassess the overall scope of the Cassiar Gold property and follow up on potential targets that could in the near term be developed to provide additional mill feed to the currently fully permitted mill on the property. Potential exploration targets included: East and West Bain, Katherine, Pete, and Sky Gap areas.

1.1 Location

The Cassiar Gold property is located in the Liard Mining Division, Northern British Columbia, NTS map sheet 104P/4E and BCGS map sheets 104P022 & 104P012. The Mine Site and staging areas are located at 59 degrees 14' 22" latitude and 129 degrees 40' 4" longitude or 6566895N, 461907E, UTM Zone 09 NAD 83 (Figure 1).

[1] Beakon Hill Consultants., Update of Technical Report on the Table Mountain Property for Hawthorne Gold Corp., June 1, 2008

[2] Wardrop Engineering Inc., Technical Report on the Taurus Deposit for Cusac Gold Mines Ltd., May 15, 2007

Geographically, the Cassiar Gold property is situated 141 km southwest of Watson Lake, Yukon Territory and 117 km north of Dease Lake along the Stewart Cassiar Highway (Hwy 37N). Access to the property is via Jade City, an unincorporated settlement along Highway 37.

Access to the property is via highway travel, and chartered fix wing into the Cassiar airstrip (in the abandoned township of Cassiar, 15 kilometers northwest of Jade City).

1.2 Physiography

The town of Cassiar was decommissioned in after the asbestos mine in Cassiar was forced to shut down in 1992. Power for the region has historically been and will in the future have to be provided by privately owned diesel generators. Proposals for a run-of-river hydroelectric project was put forth by local groups in the area in 2008 but no final decisions have yet been made.

Access into the project area is by highway access. Chartered flight can be made into the Cassiar airstrip, located at coordinates 453738 E, 6571429 N, approximately 9 kilometers NW from Table Mountain. From the Stewart-Cassiar Highway, access into the mine site is by compact gravel road. Beyond the mine site, the remainder of the property can be accessed by hauling roads and dirt trails. ATV's and all wheel-drive vehicles are required for access to remote areas.

The Cassiar Gold property extends from Long Lake in the north through to the Cottonwood and Dease River Valleys in the south. Major valley creeks within this region include Quartz Creek, McDame Creek valley and McDame Lake, Finlayson Creek, and the upper valley of Pooley Creek. Valley floors can be up to one kilometer wide with swampy areas separated by low hills with elevations between 900 and 1,000 metres. Valley slopes rise steeply to local peaks over 2,000 metres in elevation throughout the property. Although the surrounding mountainous areas are rugged, much of the area has rolling topography. The highest peak on the property is Black Fox Mountain at 2,143 metres. Erickson, Beaton and Finlayson creeks all flow into McDame Creek. Prominent topographic features also included on the property are Callison Lake, Needlepoint Mountain and Juniper Mountain.

Forest areas consist of Jackpine, Lodgepole pine, Black spruce, and Poplar. Average tree line is at 1,400 meters where buckbrush and alpine meadows are abundant. Valley bottoms comprise shallow lakes and swamps with thick, stunted growths of pine and spruce.

The climate is characterized by short, warm summers and long, cold winters. Daily mean temperatures recorded at Jade City range from –20°C in January to +15°C in July. Snowfall between October and May has an average total accumulation of 227 centimeters.

1.3 Property

106 mineral claims located on the Cassiar Gold property comprising the Table Mountain portion of the property. The claim tenure numbers, names, expiry dates, areas, and tag numbers that comprise the property are all currently in good standing are listed in Table 1. Figure 2 illustrates the Cassiar Gold property in more detail. Figures 3 and 4 illustrate the mineral claims immediately associated with the Taurus and Table Mountain project areas respectively.

Hawthorne controls the mineral rights to a total of 53,667 hectares (132,614 acres) with the Cassiar Gold Property. The Table Mountain project area covers contiguous mineral claims of approximately

37,123 hectares. The adjacent Taurus project area covers contiguous mineral claims of approximately 15,629 hectares. The claim group optioned from American Bonanza Gold Corp. covers 915 hectares.

1.4 Infrastructure

The Table Mountain Mine (Historic Erickson Gold Mine) processing facilities are located at 461437 E and 6566708 N. Figure 5 illustrates the mine area where a 270 ton-per-day gravity-floatation mill, power plant, assay lab, service facilities, offices and core library currently exist in operating condition.

Three permitted tailings facilities are located in this vicinity. Tailings Facility #1 is located proximal to the mill and TFS#2 & TFS#3 are located proximal to the office building. There are 13 portals on the Table Mountain project area and 3 portals on the Taurus project area. Numerous old surface disturbances such as access roads, trenches, open pits, underground staging areas, and diamond drill sites occur

throughout the property. Some have been reclaimed naturally and some have been reclaimed through removal of debris, re-contouring and seeding.

1.5 Exploration History

The exploration history below is an unedited extract from J. Fox, G. Kirkham, and W. Strokes, Beacon Hill Consultants, Update on Technical Report on the Table Mountain Property, June 2008, page 6-1 to 6-5.

1874. Placer gold was first discovered in the McDame area. Placer production in the district became significant with little attention was given to lode gold deposits until 1933.

1934. The first gold-bearing quartz veins found in the region was discovered in Quartzrock & Troutline Creeks (now part of the Taurus project area). As a result, the first mineral claims were staked.

1935. The Vollaug vein was discovered by John Vollaug and his partner Hans Erickson. Vollaug and Erickson also staked the Agnes and Jennie claims covering the original exposure of the Jennie vein in what is now known as the Main Mine area.

1937. Cominco completed a prospecting, trenching, and drilling program on the Vollaug vein structure. Around this time, an unknown group brought a small mill to the Jennie vein location and drove a short crosscut to the vein. No significant values were encountered and work was terminated. These early workers stopped only a few rounds short of a high-grade shoot on the Jennie vein.

1938. The McDame Lake Mining Company produced a small scale mining operation on the Jennie vein. Approximately 130 tons of ore was mined, 114 oz Au and 20 oz Ag was recovered.

1942 to 1946. A prospector named Pete Hamlin exposed auriferous quartz veins in trenches in what is known as “The Pete” in Pooley Pass.

1950. Silver Standard Mines Limited acquired and explored the western portion of the Vollaug vein. Pete Hamlin introduced the Brett brothers to the Table Mountain and Pooley Pass areas in the late 50s. The Brett’s staked several claim blocks in the area during this period.

1951. G. Davis operated a 5-ton mill on the Nora claims, south of McDame Lake. Lode production from the Cornucopia claims; 35 oz of Au and 3 oz of Ag from 25 tones of quartz ore.

1961. Troutline Creek Mining produced on the eastern portions of the Vollaug vein. Approximately 80 tons of ore were reported to have been treated in a pilot mill with a recovery of slightly below 1 opt.

1965. Glen Copper Mines Ltd was formed by the Bretts. Glen Copper Mines evolved, into Cusac Industries Ltd., to become Cusac Gold Mines Ltd. in 1995. Troutline Creek Mining conducted approximately 2000 ft of diamond drilling on the Vollaug vein (not well documented).

1973, Table Mountain Mines opened an adit and drove a decline on an ore shoot on the west end of the Vollaug vein based on results from the 1937 Cominco drilling and the Silver Standard work from the 1950s. Agnes & Jennie Mining Company (AJM) acquire Figure 1 and Figure 2 claims containing the Jennie vein. One percussion drill hole was drilled into the Jennie structure.

In 1974, David and Kristian Ross of the Agnes and Jennie Mining Company Limited, trenched and sampled the original high grade outcrop of the Jennie vein exposed on Erickson Creek.

Asamera Oil Corporation Ltd. of Calgary and Silver Standard Mines drove 1726 ft (526.08 meters) drift equivalent of 8 x 8 ft adit, drift and raise from the 57 Portal, collared at 5173 ft (1576 meters) elevation on the Hurricane 1 & 2 crown grants.

In addition to the 57 Portal, a 4 x 6 ft decline was driven on the "A" ore shoot in July, in a northeasterly direction from the 5480 ft (1670.30 meters) elevation. The decline was at -27 degrees, a total distance of 248 ft (75.59 meters), and average grade of 1.07 oz/t Au across true width of 2.2 ft (0.67 meters). Grade increased with depth to and the bottom of the decline 1.29 oz/t Au across 2.2 ft (0.67 meters).

1975. AJM drilled 140 feet (42.7 meters) percussion hole in spring, west of Erickson Creek. The percussion hole drilled 0.08 opt at 130.0 to 140.0 feet.

1976. Nu-Energy optioned Figure 1 and Figure 02 claims from AJM. Nu-Energy Development Corp. became 50% partner in the exploration of the Jennie vein. Nu Energy drilled 18 winkle holes (76-1 to 76-18) for total of 397.8 meters and defined a high-grade ore shoot within the Jennie structure.

1977. Nu-Energy conducted geophysical program of VLF EM16 & MAG, totaling 28.7 line kilometers at 30 meter stations and 60 meter line spacing.

Table Mountain Mines followed up on the Vollaug adit and decline with an adit extension and two raises. This proved up an ore shoot within the Vollaug structure but mining of the ore did not take place. In the same year, Guilford Brett of Cusac Industries Ltd. staked key claims in the area south of Table Mountain.

Nu-Energy and AJM developed a cross-cut adit, collared 235 meters N 30 degrees W of the Jennie Vein outcrop in Erickson Creek and 61 meters lower in elevation (Level 35, at 1350 meters RL). The adit cut the Jennie Vein at 191 meters and was continued to 227 meters (that is, 36 meters of drifting along the lower section of the ore shoot). 27 underground holes were drilled during February to April in 1977. Drifting to the west along the Jennie Vein started in December 1977 through to January 1978. Estimated production was 100-150 tons per day.

1978. Erickson Gold Mining Corporation (EGM) was formed. Underground workings had help establish a probable reserve in excess of 13,000 oz. of gold. A $1.5 million loan was arranged with the Royal Bank of Canada in September 1978 and construction was immediately started on a 125 ton per day gravity-float mill. Milling commenced on December 22, 1978 with the initial bank loan paid for less than ten months later. The Jennie vein eventually produced more than 62,000 oz Au from 113,000 tons of ore.

1979. Cusac Industries Ltd. conducted a program of mapping, geochemistry, geophysics, and drilling on the Pete claim. Cusac built a road into the Pete area and three holes were drilled in 1980. No significant intersections were reported. EGM drilled 15 BQ diamond holes total 1450.19 meters into the Jennie vein. All but 4 intersected, indicating westerly rake and continuity.

1980. Plaza Mining Corporation acquired the claims along the strike extension of the Vollaug vein to the east of the Table Mountain Mine property from Troutline Mines Ltd. Plaza erected a 150-ton per day mill and produced from two small open pits on the Vollaug.

Esso Resources Canada Ltd. (Esso) entered into an option agreement with ECM, Newcoast Silver Mines (Newcoast) and Table Mountain Mines, to explore portions of the McDame valley that surrounded the Min Mine. Esso conducted 35 square kilometers of mapping at 1:12,000 scale, 27 line kilometers of EM-16, 404 organic samples, 444 soil samples of B horizon, 1 heavy mineral sample, and 27 line kilometers of line cutting and picketing.

1981. EGM's exploration work in the Main Mine area during 1981-82 defined a second significant gold-bearing structure, the Maura vein. Both the Jennie and Maura veins were developed down dip by a second adit at the 1280-meter elevation (the 28 Level). A third adit was driven at an elevation of 1210 metres (the 21 Level) to develop the Maura structure at greater depth. The Devine, Bear, Goldie, and Dease veins were discovered during this development.

Plaza conducted 12544 ft (3823.42 meters) of drilling on Zone III reserves and explored for the previously untested portions of the Vollaug vein between the three known mineralized zones on the Wildcat claims.

Esso conducted a total of 3680 soil samples, 51 mill samples, 76 rock chip samples, 4.8 line kilometers of EM geophysics, 5.9 square kilometers of mapping, and 68.27 line kilometers of line cutting (10 meter intervals for the Porcupine, Davis and Lakeview Goldhill). Property work was divided into four sections; orientation program, 1979 follow-up, Main Grid and Sky Grid. Two diamond drill holes totaling 204.3 meters of BQ was drilled into the Sky vein.

1982. Surface drilling by EGM resulted in the discovery of the Alison vein in the Main Mine, located in the footwall of the Maura and Jennie zones. In December of 1982, the AJM and Nu-Energy amalgamated to form the Erickson Creek Gold Mining Co. (Erickson). To the south of Table Mountain, Cusac Industries discovered the high-grade Dino vein. Development of a crosscut, 300 feet of drift on the Hot vein and a raise to surface were completed but low grades discouraged further work.

1983. Esso collected 124 soil and 32 rock samples (20 meter stations) with trench/saw sampling at Switchback, 1.3 square kilometers of mapping, 1.56 line kilometers of picketing and 2 line kilometers of line cutting. A total of 934.4 meters of diamond drilling, four into Davis-Porcupine totaling 592.5 meters of BQ and seven into Sky Vein totaling 341.9 meters of BQ.

Plaza Mining Corporation went into receivership. Erickson acquired the Plaza assets along the remaining strike length of the Vollaug vein on Table Mountain. Erickson started the 42 level adit (Troutline Adit) at 1420-meter elevation, approximately 3 km east of the Main Mine workings to develop some of the reserves on the Vollaug structure. In the same year, Erickson also initiated work on a new adit below the Main Mine workings known as the 14 Level at 1140-meter elevation.

1984. The original mill capacity at the Erickson Mine was expanded to 300 tons per day.

1984, Cusac entered into option agreement with Erickson, whereby Erickson became operator of the Cusac claims south of Table Mountain. Over the years, further mineral rights were obtained on adjacent ground by staking, purchase, and under option agreements.

1985. Erickson discovered the Eileen vein south of the Dino vein in Cusac's Cordoba claim. Drilling resulted in the definition of an economic ore body, which was developed via the Cusac Mine decline. Total Compagnie Francaise des Petroles, a French government-affiliated energy company, acquired operating control of Erickson Gold Mining Co. in the same year and formed Total Energold.

1986. Total Energold proceeded with ore production from the Eileen. Underground mapping and drilling resulted in the discovery of the Michelle vein. At the mill at Erickson Mine was destroyed in a fire in January. A new mill was built. The mine was brought back into production in October.

1987. Prospecting was conducted west of the Eileen vein and the Katherine vein was discovered on the NuTara claim. Subsequent percussion and diamond-drilling programs were carried out to define the resource at the Katherine vein. Late in the year, an underground diamond drill program, testing east of the Eileen workings, discovered the Michelle High Grade zone (MHG). Attempts to further define the MHG from surface were ineffective. Definition drilling from underground was limited to available drill station locations as further development was halted by heavy water flows. A preliminary estimate of the potential of this zone indicated 24,337 tons at a grade of 1.019 oz/T Au*****. These results encouraged Total Energold to embark on an ambitious exploration and development program.

1988. A 2.5 km adit (the 10 Level) was collared in the fall of to investigate the MHG. At this point, reserves were depleted and production from the Cusac Mine and the Main Mine had ceased. Some production continued from the Vollaug through the end of the year.

1989. Total Energold completed 1.7 km of drift from the 10 Level adit. Work was terminated due to unexpectedly high costs and heavy ground water flows. This resulted in an integrated exploration program of trenching, mapping, geophysics, and diamond drilling in the Cusac area to explore for new resources. The Bain vein was discovered and a small mineral inventory was defined.

1990. Additional geophysics, geochemistry and diamond drilling conducted in 1990 and 1991 resulted in the definition of two significant reserve blocks on the Bain vein. West Bain contained historical estimates defined as drill-indicated probable reserves of 34,741 tons at 0.687 oz/T Au. The East Bain contained historical estimates defined as drill-indicated probable reserves of 22,120 tons at 0.565 oz/T Au*****. Surface exploration resulted in the discovery of the Christine vein and a mineralized zone on the Theresa vein in the Hunter area, 8 kilometers east of the Cusac Portal.

1991. Total Energold divest all North American mineral assets to focus on oil and gas interests. Erickson Gold assets and operations were assigned to Energold Minerals Inc. and were subsequently purchased outright by Cusac Industries Ltd., free and clear of any royalties to Energold.

1993. Cusac reopened the Bain mine and 300 ton per day milling operation at Table Mountain with the main production target being the West Bain structure. Definition drilling conducted on the West Bain zone confirmed reserve estimates. A limited surface exploration program resulted in the discovery of the Bonanza zone west of the West Bain. This zone is structurally complex and no resource has hence been defined. Cusac proceeded to initiate development of the West Bain zone. During this period the old Cusac Portal workings were reopened and examined. Remarkably, no water was encountered in the workings. The development of the 10 level had lowered the water table and drained the water that had prevented the former owners from developing the MHG.

1994. Development of the West Bain vein commenced in April.

1995 Underground mining was of the West Bain completed in July, with the crown pillar extraction occurring in August. Surface diamond drilling of the Katherine vein to the west of the Bain resulted in the definition of a small open-pit reserve. This block was subsequently mined. The Bain Gap, between the East and West Bain blocks, was tested with inconclusive results. At the Cusac decline, the Michelle High-grade vein (MHG) and the Big vein were defined and mined.

An I.P. survey, designed to test for zones similar to that being investigated at Taurus was undertaken to the north of McDame Creek. Cusac entered into a joint venture agreement with Cyprus Canada Inc. (Cyprus), whereby Cypress would become operators of Cusac's Taurus project. At the time, the Cusac's Taurus project encompassed a 40 square km group of claims in the northern portion of the property straddling the boundaries of claims held by International Taurus Resources Inc. (Taurus) and Cusac.

1996. After spending approximately $3 million, Cyprus elected to withdraw from the Taurus project. Subsequent to Cyprus' withdrawal, Cusac entered into an option agreement with Taurus regarding the same group of claims. As a result of exploration completed by Cyprus and Taurus on the Taurus/Cusac project, Taurus geologists have estimated drill-indicated and geologically drill-inferred resources of approximately 1 million ounces of gold at a grade of 1g/T gold*****. The bulk of mineralization on Cusac's portion of the project is in the inferred category. This low-grade, near surface, potentially bulk mineable resource is associated with shear zones and disseminated sulphide mineralization.

South at Table Mountain, the 10 Level development, dormant since late 1989, was restarted and was extended by 250m. Underground drilling at the Cusac Mine discovered the Lily vein, the eastern extension of the MHG. Mining of the Lily from the 1160m Level commenced in March 1996. The Lily was eventually mined between the 1130 and 1170 levels over a strike length of 150m. Underground drill testing of the ground north of the Lily resulted in the discovery of the Melissa structure. Access was driven but fault disruption of the structure rendered the vein sub-economic. A compilation of Vollaug data undertaken to re-evaluate existing reserves and drilling of selected targets. Rehabilitation of the 57 (1570) Level portal and decline was undertaken and mining began in October of 1996.

1997. Mining from the 57 Portal was completed in February of 1997 and work commenced on rehabilitation of the 49 Level drift and production commenced in April 1997. Dilution, due to poor hanging wall conditions, and erratic grade distribution combined to result in lower than anticipated recovered grades. Lowered grade and low gold prices combined to make the zone sub-economic. The mining was halted in July 1997. Between July and September of 1997, open-pit mining of an ore panel on the Vollaug vein in the Table Mountain Mine area, initially discovered by Cominco in 1937, and subsequently upgraded by drilling in 1996, was completed.

The Cusac decline was extended east between May and July of 1997 to permit drill testing of the Lily vein further to the east. This drilling yielded mineralized quartz vein with a significant result of 1.038oz/t over 0.5 metres is included in a weighted composite of 0.636 oz/t Au over 1.56 metres.

An exploration drill program was undertaken to test the area east of the Erickson Creek Fault Zone (ECFZ) near the Main Mine. Initial attempts to follow up isolated intersections from previous drilling met with mixed results. Drilling the Bear vein extension, east of the Main Mine, resulted in the partial definition of a near surface ore shoot.

At the Cusac Portal, portions of the Melissa and narrow vein sections of the Lily on the 1600 level were mined during September through November 1997.

1998. An overburden trenching and vein sampling program was conducted on the Sun Claim. The objectives were to expose the Bear Vein, intersected and partially defined by diamond drilling in 1997, and to evaluate the lateral distribution and continuity of Au grade within the structure. A portion composed of 36m strike length exposed vein material which yielded a cut composite grade of 1.155 oz/T Au over an average vein width of 0.57m. Widely spaced diamond drill hole intersections suggested that this grade might carry 15m down-dip locally. The decision was made to extract and process a portion of the vein from surface to 6-7m down dip employing an air-track and 235 Excavator. Mining of this portion of the Bear Vein took place in late 1998 and 1999.

2002. A surface diamond drill program was undertaken to confirm and possibly expand an ore panel on the East Bain Vein that was initially intersected and partially defined by diamond drilling in 1990-91. A total of 2,395 metres of drilling was completed in eleven NQ surface diamond drill holes. A technical report in 2003 by Dale A. Sketchley, M.Sc., P.Geo. reported a combined inferred/indicated uncut, undiluted mineral resource of 23,433 Tons of 1.0oz/t Au for the East Bain Vein.

2004. Discovery of the Rory vein while delineating the down dip extension of the Maura vein 400 meters down dip. The discovery hole was cut short and 36 more holes were then drilled into the Rory to define geometry. A total of 37 NQ drill holes (5522.7 meters) into the Rory Vein, 4 NQ drill holes (955.3 meters) into the Hot Vein, all totaling 41 diamond drill holes at 6478 meters combined. A probable reserve of 16000 tons grading 0.46 oz/t, containing 7360 ounces of gold was established for the Rory vein.

2005. Exploration commenced on Taurus II, the area between Table Mountain and Taurus. Six drill holes (1140.1 meters) into Backyard, eleven holes (2137.7meters) into Somerville, and one hole (181.4 meters) into Porcupine East. Soil geochemistry, eight 150 meter lines at 50 meter spacing, 12.5 meter stations, with 90 samples taken in total.

2006. Continued exploration on Taurus II. A soil geochemical survey was completed over 8.5 km2. 20 Au anomalous areas and an additional 30 spot highs were identified. A Lidar survey was flown over 139 km2 of the property. An ortho-photo mosaic was developed for a 34 km2 portion of the survey area. Eight (8) excavator trenches with a combined length of 530 m (0.2 ha) were completed. A total of twenty-one (21) NQ diamond drill holes with a combined depth of 3,280 m were drilled in the Taurus II Project Area. Twelve holes (1885.5 m) were drilled to test the western extension of the ORO Structure exposed in the Trench 3 Area under the Van Argillite Cap. Five holes (586.1 m) were drilled to test the Blue Zone exposed in the Trench 5 area. An additional four holes (808.8 m) were drilled to test isolated targets in the Reo, TR-6E, and Hwy areas.

2007. Cusac drills Taurus at the 88-Hill Zone. The intent was to increase the confidence level of the inferred resource and to increase the geological understanding of gold distribution throughout the area. 6 drill holes, totaling 953.12 meters of HQ core was drilled at 25 meter spacing on the Mac #3 and Hopeful #2 claims.

2008. Hawthorne Gold conducted a regional airborne geophysical survey (MAG and VLF-EM). A regional program was conducted including soil sampling (606 samples), rock sampling (391 samples), reconnaissance mapping as well as core salvaging/preservation. Additionally, 15 holes were completed for a total of 2,536.54 meters of HQ core drilled to further define the East Bain Resource.

* *It should be noted that the resources and reserves utilized within this section are historical.*

1.6 Geological Setting

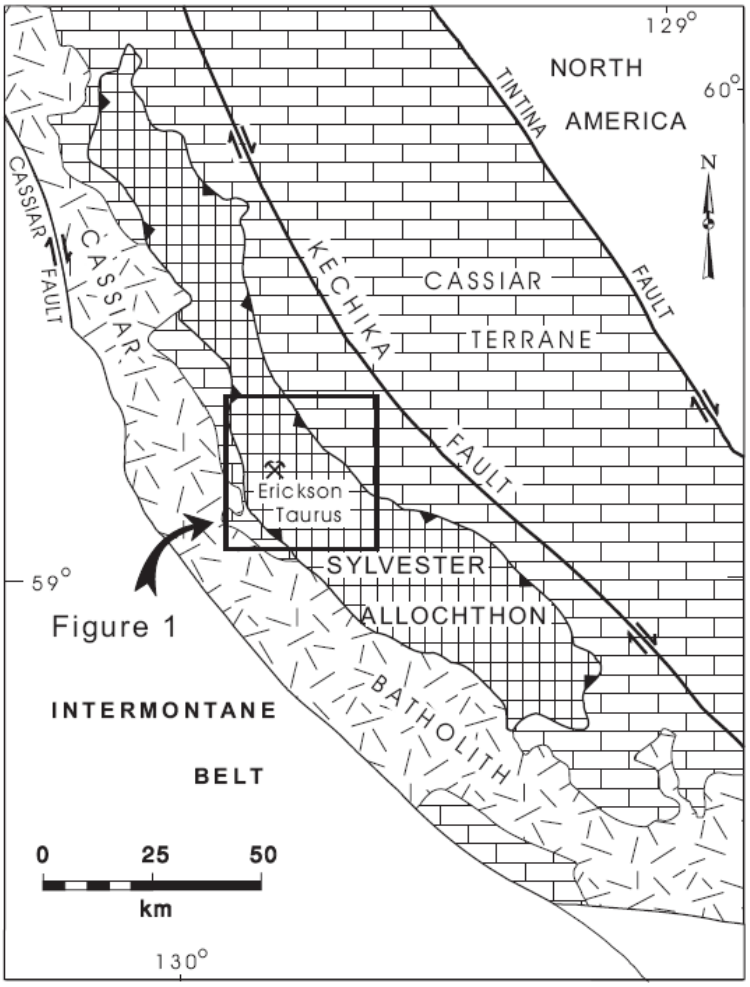

Figure 4. Location and tectonic setting of the Cassiar Gold property. From BCGS Bulletin 108: Ophiolite Related Gold Quartz Veins in the North American Cordillera, Northern Slide Mountain Terrane Cassiar Gold Camp, Chapter 7, page 73-79.

The Cassiar Gold Camp is situated in the Sylvester Allochthon of the Slide Mountain Terrane, emplaced sometime between the Late Triassic and Mid-Cretaceous onto autochthonous rocks of the Cassiar Terrane. The internal structure of the Sylvester Allochthon is characterized by many interleaved tectonic slices, bounded by subhorizontal, layer-parallel faults induced by Jurassic compressional tectonics.

Thrusting along easterly-directed thrusts occurred over regional-scale folding, resulting in the creation of three stacked, structural-lithological packages. The lowermost thrust sheet of the package is composed of sub-greenschist facies meta-andesites and cherts. The middle thrust sheet is composed of graphitic argillite with minor interbedded siltstones and sandstones. The uppermost thrust sheet consists of pyroxene porphyritic altered volcanic rocks with minor intercalated metasediments. These rocks range in age from Late Devonian to Late Triassic.

Cretaceous and Tertiary lamprophyre and diabase dikes intrude locally. The Sylvester Allochthon occupies the flat-bottomed McDame synclinorium. The synclinal geometry resulted from the formation of anticlinal stacks on either side during compression. Emplacement of the Cassiar batholith uplifted the pile, contributing to the consistent northeastward dip along its western margin.

Gold mineralization occurs in quartz vein systems within the lowermost thrust sheet proximal to the Table Mountain thrust. Auriferous poly-phase quartz veining is present where impermeable structural discontinuity is believed to have localized hydrothermal fluid flow. Ore grade veins are concentrated

along north-south trending zones of faulting, where hydrothermal centres are expressed by clusters of alteration zones, veins, and faults. Dating of sericite, associated with auriferous quartz veining, indicates an Early Cretaceous age. This postdates emplacement of the Sylvester Allochthon and pre-dates the Middle to Late Cretaceous emplacement of the Cassiar Batholith.

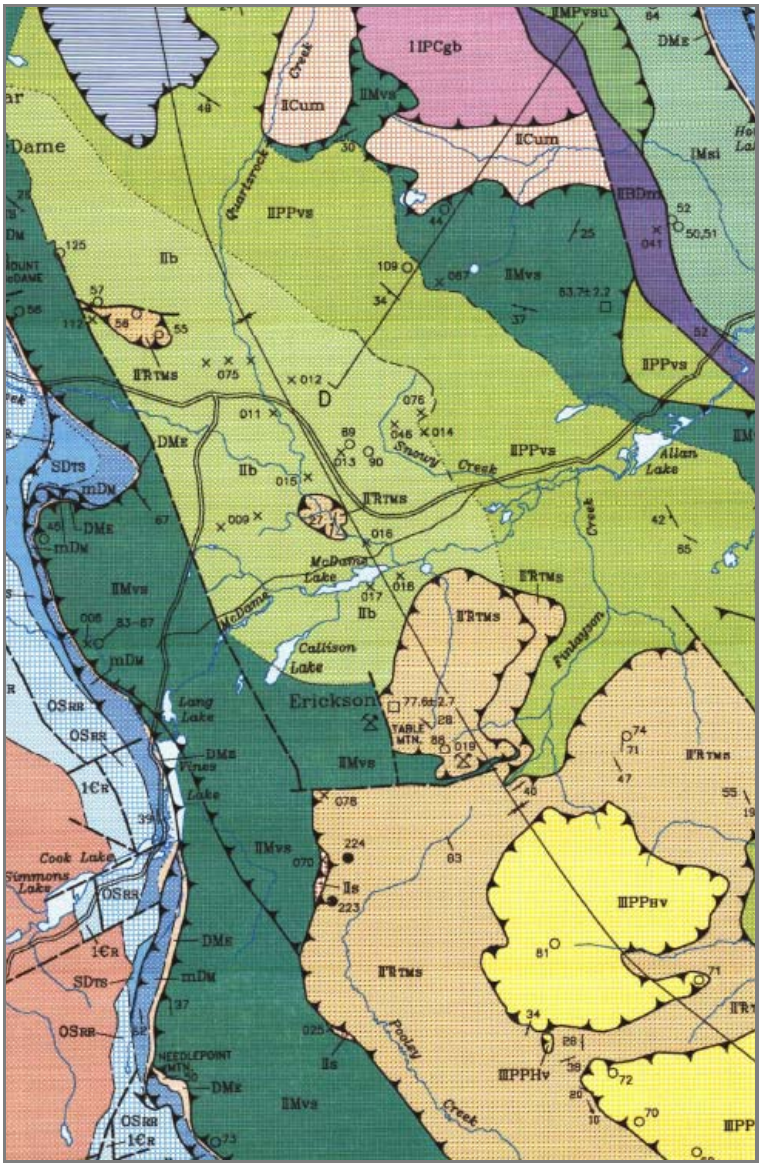

Figure 5. Regional Geology. J.L. Nelson and J.A. Bradford, 1993. BCGS Bulletin 83: Geology of the Midway - Cassiar Area, Northern British Columbia. Legend: **Kgr** Cretaceous Granite; **IIs** Unknown Age Serpentinite; **$IIIPP_{HV}$** Penssylvanian to Permian Hunter Volcanics; **$IITR_{TMS}$** Triassic Table Mountain Sediments; **IIb** Unknown Age Massiveand pillowed basalt flows, lesser tuff; $IIPP_{VS}$ Pennsylvanian to Permian Basalt flows and tuffs; and **IIM_{VS}** Mississippian Basalt, diabase, chert, argillite, calcarenite, sandstone and conglomerate.

It is believed that hydrothermal fluid flow may be attributed to hidden intrusives, and that fluid flow has been localized by early transcurrent faults and associated transtensional zones. In contrast, it is debated that the Cassiar Gold Camp exhibits similarities to Archean Lode Gold districts, where mesothermal processes are the driving factors to gold mineralization.

The Table Mountain and Taurus project areas are two current productive centers in the Cassiar Gold Camp. Both lie along a major north- northwest trending, right lateral fault system, known as the Erickson Creek Fault Zone (ECFZ). Discontinuous thrust slices of ultramafic rocks containing listwanite (generally interpreted to be metasomatized serpentinites) is believed to play a key role in quartz vein formation and gold deposition at Table Mountain. Historically, the richest gold veins were found in basalt immediately below a barren argillite cap that crops out extensively in the southern portion of the camp (Table Mountain) and locally forms thin klippen to the north (Taurus).

Veins average 1-2 meters in width with high grade veins averaging approximately 0.50 ounces per ton. The East Bain deposit is a current example of these small high grade vein systems. It contains a NI43-101 compliant indicated resource of 13,708 ounces of gold (22,157 tons at 0.62 ounce per ton gold). The Cassiar Gold property also contains low grade bulk tonnage potential, particularly to the north where a NI43-101 compliant inferred

resource of 1.04 million ounces of gold (32.4 million tonnes at an average gold grade of 1.0 gram per tonne).

2.0 Regional Soil Sampling Program

2.1 Scope of Work:

During the 2009 field season 1562 samples were collected from 3 separate grids. All grid lines were spacing 100 meters apart and oriented perpendicular to the baseline. Samples were collected at 50 meter intervals along the grid lines. Samples were collected from an average depth of 18 inches and targeted the B horizon whenever possible. Approximately 250 -500 grams of soil material was packaged into kraft soil sample bags from each sample site and subsequently dried, packaged into rice bags, security tagged and shipped to ALS Chemex of North Vancouver, BC using Banstra Trucking. Analysis conducted on each sample included a 32 element ICP and gravimetrically finished Au analysis by fire assay. Gold analysis completed using ALS Chemex's procedure known as Au-AA23 which has a detection limit of 0.005 ppm.

2.2 Pete Extension Grid

This grid was designed as an extension to the 2008 Pete grid. The grid was conducted on top of a Mississippian Basalt unit which is known to host several mineralized veins in the Table Mountain area. The southwest corner of the grid reported anomalous Au values coincident with a geophysics anomaly located in this area. The grid was extended to further delineate the geochemical anomaly and to further evaluate the geophysical anomaly by mapping. The baseline runs at a strike of 315 degrees which parallels the 2008 grid. Lines were 1 km in length with the exception of several northern lines which were shortened to accommodate the Jester grid. Terrain within the grid was mountainous with some glacial lakes. The grid contained forests in the east and alpine meadows at higher elevations in the west.

477 samples were collected from the grid during June 13th to June 20th inclusive. 6 samples were rock the remaining 471 samples were soil. There were a few sample sites omitted due to swamps in the alpine.

2.3 Results:

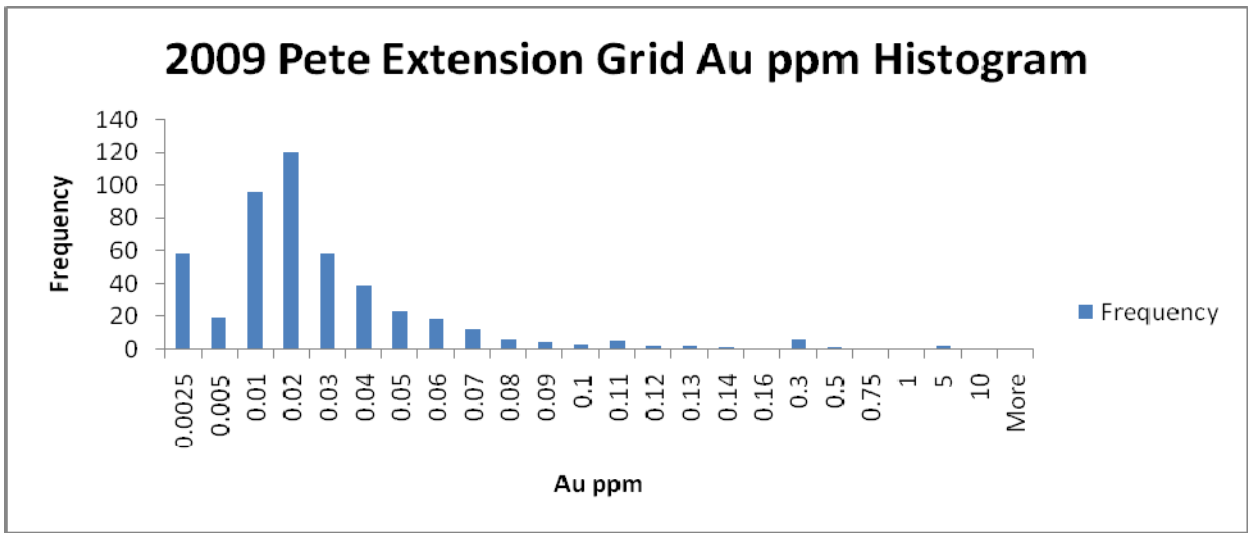

The highest grade Au anomalies on the grid at 461080 E 6556460 N yielded 2.76 ppm Au in a rock sample which displayed Taurus type mineralization sample H126469. Two other anomalous samples were reported within 150 meters distance from the sample. The strike of veining associated with mineralization was ~277 degrees. A second significant anomaly was encountered on the easternmost line of the grid, with a soil sample yielding Au 2.52 ppm. Three other significantly anomalous samples are located within a 200 meter distance from this sample.

The anomaly which was indicated in the 2008 soil sampling program at 460604 E 6557788 N coincides with the contact of the listwanite body interpreted from geophysical Mag data. One anomalous zone

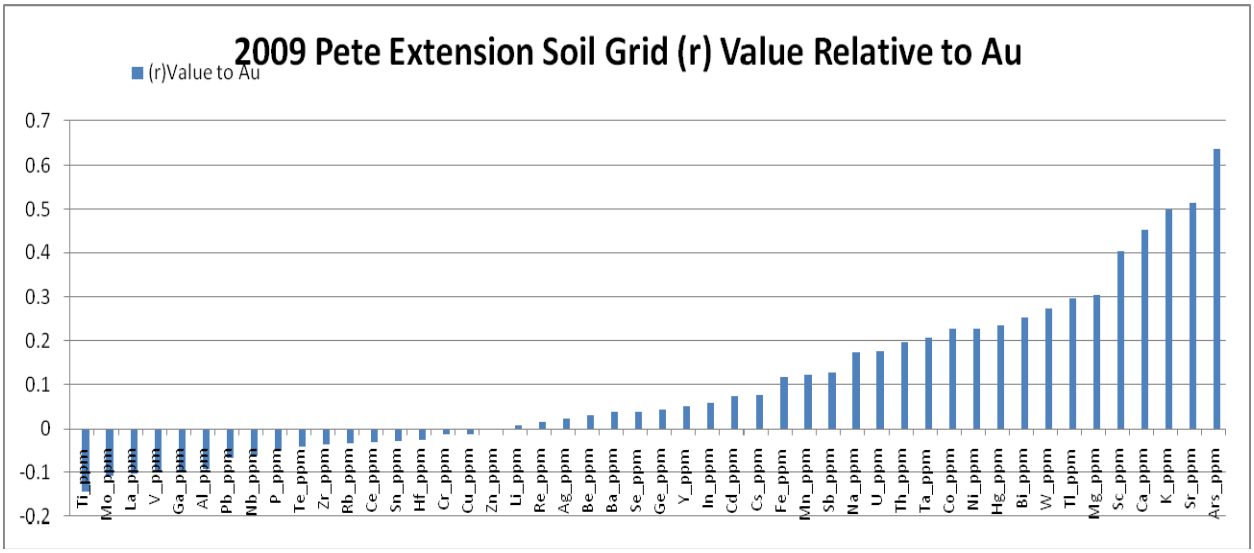

indicated by both grids is located in the NE centre of the Pete Extension grid, where a number of samples with au values ranging from 0.1–0.2 ppm were reported.

There may be a correlation between anomalous soil data and EW structures which are inferred from the magnetic geophysical data (TDR). These structures may indicate fault zones of interest, or magnetic dykes.

The Histogram for Pete Extension below indicates that Au values between 0.60 to 0.80 ppm rank weakly anomalous, while values greater than 0.80 ppm Au rank anomalous.

From the graph below Au is observed to have a weak to moderate positive correlation with the following elements as per Pearson Correlation Coefficient calculations: As, Sr, K, Ca, and Sc with (r) values of 0.63, 0.51, 0.50, 0.45, and 0.40 respectively.

2.4 Recommendations:

Additional mapping and sampling is recommended proximal to the Taurus style mineralization encountered within the Pete Extension grid. It would be prudent to extend the grid to the SE to further delineate significant anomalies which were located. The anomalous area in the centre of the NE edge of the grid warrants tighter line spacing to assist with possibly identifying a trend of mineralization.

2.5 Jester Grid

The Jester Grid, located on the east flank of Needle Point Mountain encompasses the Pin claims was designed to be an extension to a historical soil grid completed in this area which yielded significant gold anomalies. The Grid overlies Mississippian rock at the Western edge of the Sylvester allocthon which is known to host mineralization. The northern portion of the grid is proximal to the Katherine Prospect which was surfaced mined in the past. A major thrust in the Basalt unit is located just to the North East of the grid. This grid connects with the Pete and Pete Extension Grids at the East and a historic Katherine grid in the north. The grid's baseline is oriented at an azimuth of 180 degrees.

The southern portion of the grid is located on alpine meadows situated on the steep flank of Needle Point Mountain. Access to the grid was via an east-west cut line which connects the Pete road to the historical Pin grid. The northern portion of the grid was accessed directly via the Katherine-Cusac road located in hilly terrain, with occasional steep cliffs. The centre of the grid was accessed using an ATV to the southern extent of 2009 Katherine drilling then hiking into the grid. The central portion of the grid was not completed due to lack of reasonable access. The terrain was swampy, with areas of significant glacial deposition, as well as forested hill sides.

718 samples were collected in total on the Jester Grid. The southern portion of the grid was sampled between July 7th – July 11th, the northern portion was completed during July 19th -23rd, 2009.

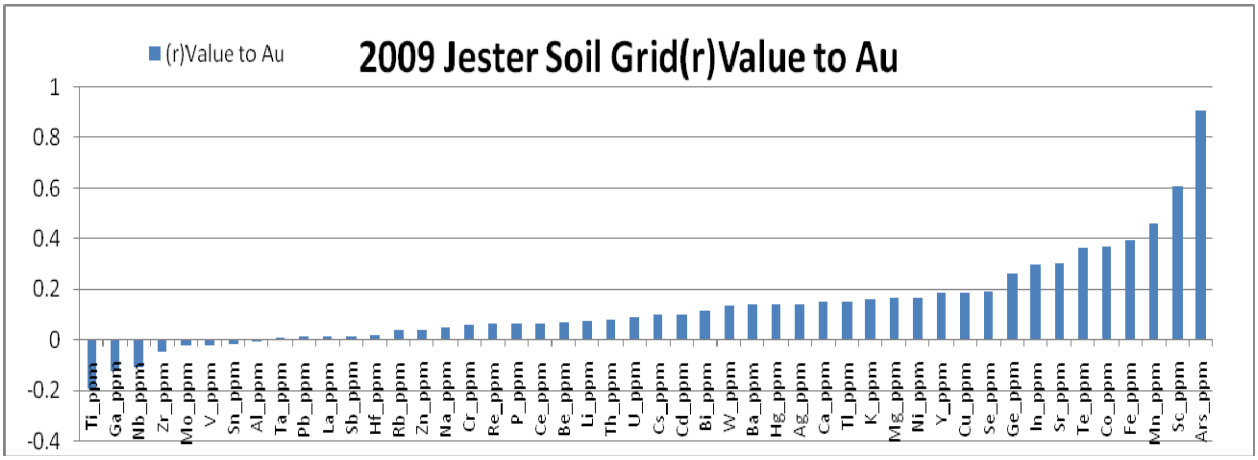

2.6 Results:

In the southern portion which overlies the Pin claims, three anomalous areas were highlighted. The first, in the area of a tarn three significantly anomalous samples highlighted the first zone: H126473 from a steep talus slope returned a gold value of 2.69 ppm, H126474 - talus with quartz-carbonate veining material reported 0.68 ppm Au, and H125967- soil sample at 0.57 ppm Au. Two additional samples with Au values above 0.50 ppm were collected in the southern portion of the grid however; occur at the edge of the soil grid.

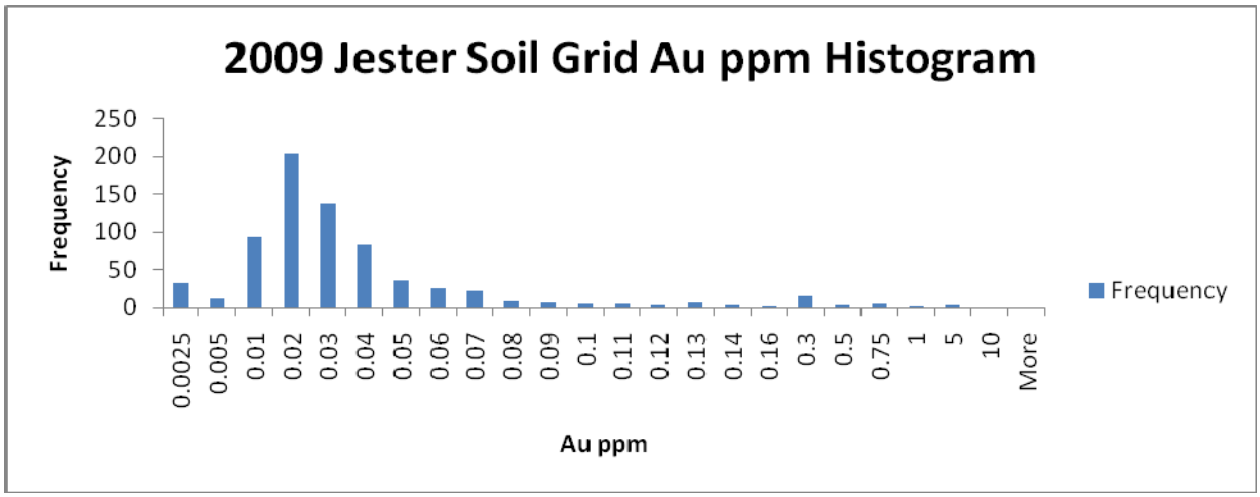

The Northern portion of the sampling area yielded a number of interesting anomalous zones. These zones are particularly attractive due to the numerous significant Au values reported from a cluster of samples. One sample from this cluster reported an Au value of 3.89 ppm (H136536).

The geophysical data was not particularly helpful difficult to interpret due to the noise and the influence of the large listwanite body in the Pete prospect. There is however a VLF-IP anomaly which coincides with Au soil anomalies in the North, but smaller scale VLF data would benefit exploration in targeting mineralization.

The histogram indicates that a value of 0.08 can be assumed, and values between 0.06 and 0.08 ppm are likely anomalous, which is consistent with the other soil grids. The Pearson Correlation Coefficient was calculated for all analyzed elements relative to gold, and the results show that As has a very strong positive correlation with gold with an (r) value of 0.9.

A moderate positive correlation with Sc and Mn with (r) values of 0.61, and 0.46 respectively.

2.7 Recommendations:

The northern portion of the Jester grid yielded very promising results, with a number of anomalies indicated by clusters of relatively high Au values. This anomaly may be indicative of an extension of the Katherine vein. Follow up mapping is recommended in this area with trenching and possibly drilling to follow. The Southern portion of the grid also yielded results however, the steep terrain and accessibility makes this area less feasible as an exploration target.

2.8 Historical:

75 soil samples were collected in 1985 in the Pin claims (Smit, 1986), which the southern portion of the Jester Grid lies.

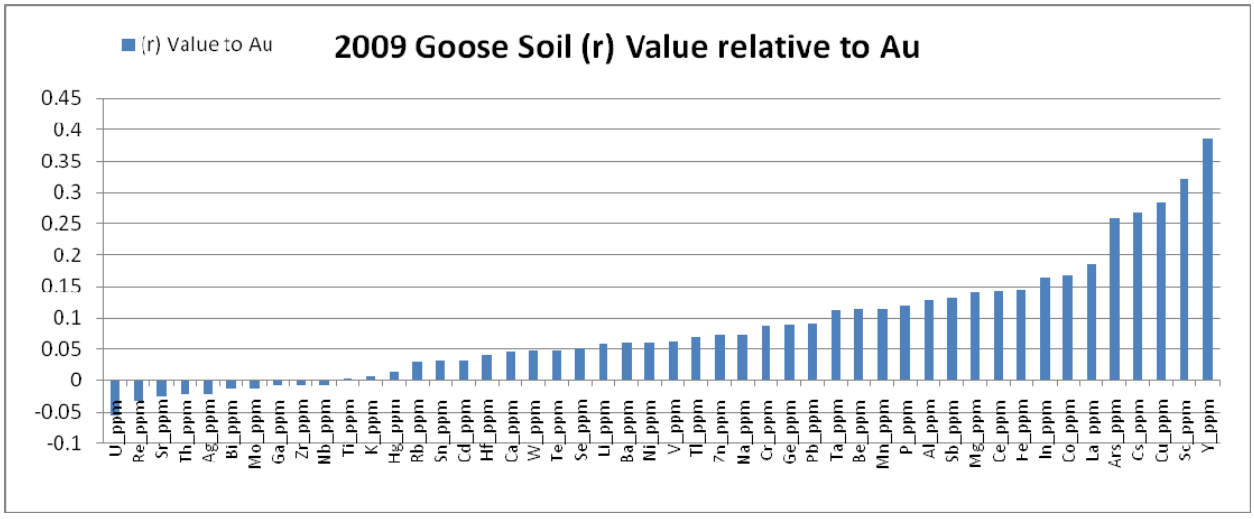

2.9 Goose Grid

The Goose grid is located northeast of the 2008 Pete Grid. This grid was conducted across a geophysics anomaly, and overlies the Table Mountain sedimentary unit. The baseline is oriented at an 80 degree azimuth. The area was accessed from the south by the Pete road and in the north by Ross road. The grid is almost entirely swamp, with some alpine meadows in the North. 367 samples were collected between July 12th and 18th. Sampling was not completed in areas where significant argillite cover was interpreted.

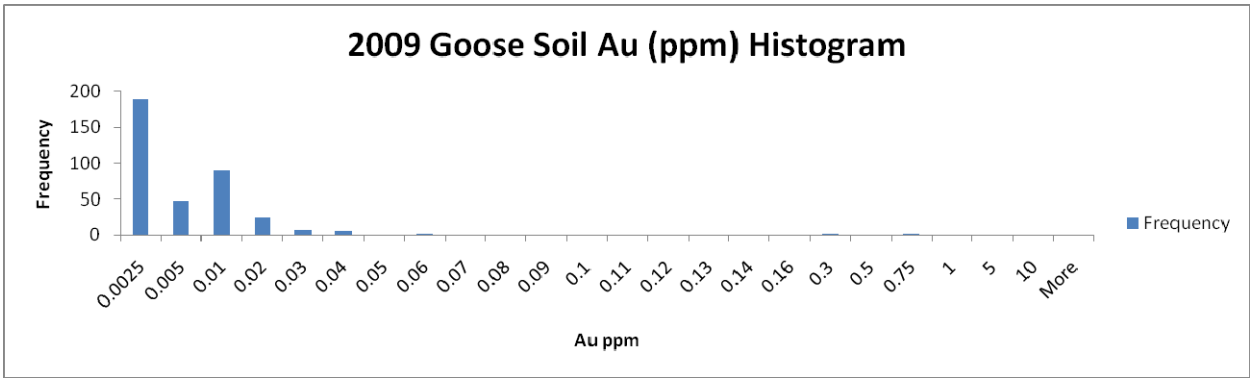

2.10 Results:

The majority of the grid is covered by an argillite cap. Results from samples collected did not show any evidence that analysis of soil samples could see below the unit. The only indicated anomalous values were found in the SE corner of the grid, close to the contact with the volcanic unit. The reason the grid was conducted was due to the results from a study on geochemical sampling in areas with argillite cover (Ball, 1991) more specifically, near the Michelle High Grade Vein. This study was conducted in an area where it was known that sulphide veins were related to a gold bearing system in the volcanic unit below which came to surface. The study concluded that anomalous metal concentrations could be identified, but they could not be spatially related to known outcroppings, another study of the same type was recommended by the author of the 2008 assessment report for the property.

Mag geophysical data in the area indicates a large magnetic body below the grid which is likely listwanite. The Mag data also shows significant linear features striking at 80 degrees, and 120 degrees. Unfortunately, the anomalous samples from the Goose grid were too sparse to allow for correlation to the geophysical data.

The Goose Grid Histogram shows only one distinct population which tapers out at 0.04 ppm, anything above this value can be considered anomalous. Au displays a weakly positive correlation with Y and Sc with (r) values of 0.39, and 0.32 respectively.

2.11 Recommendations:

Sampling over areas with significant argillite cover proved fruitless and thus not recommended.

3.0 Trenching Program

3.1 Scope of Work:

A modest trenching program comprised of three individual trenches accessed via existing roads or excavator constructed narrow trails to get to the trench sites. Trenching on the property was conducted between the dates of June 3rd to July 10th, 2009. The trenching crew was composed of three geologists and one excavator operator. Trenching was intended to follow up on geophysical, geochemical and testing for extensions to known veins. Trenches were stripped approximately 2 meters wide and subsequently washed to expose the bedrock. Trench samples were collected in sample intervals of no greater than 1.5 meters with occasional grab samples taken at particular locations to test for isolated mineralization. Sampling of the bedrock was conducted by channel sampling a 10 cm width using a diamond saw blade allowing accurate sample representation. Samples were collected exclusively in prospective zones interpreted as T3 or T4 mineralization and individually photographed. In addition to the sampling, a thorough mapping of the trenches was conducted which was subsequently reviewed, digitally logged and stored within the corporate Datashed database located in Vancouver. Finally, survey points were collected at various locations along the trench including the start point of the trench which was marked using a 6 foot high tripod which was labeled with an aluminum buttersoft tag.

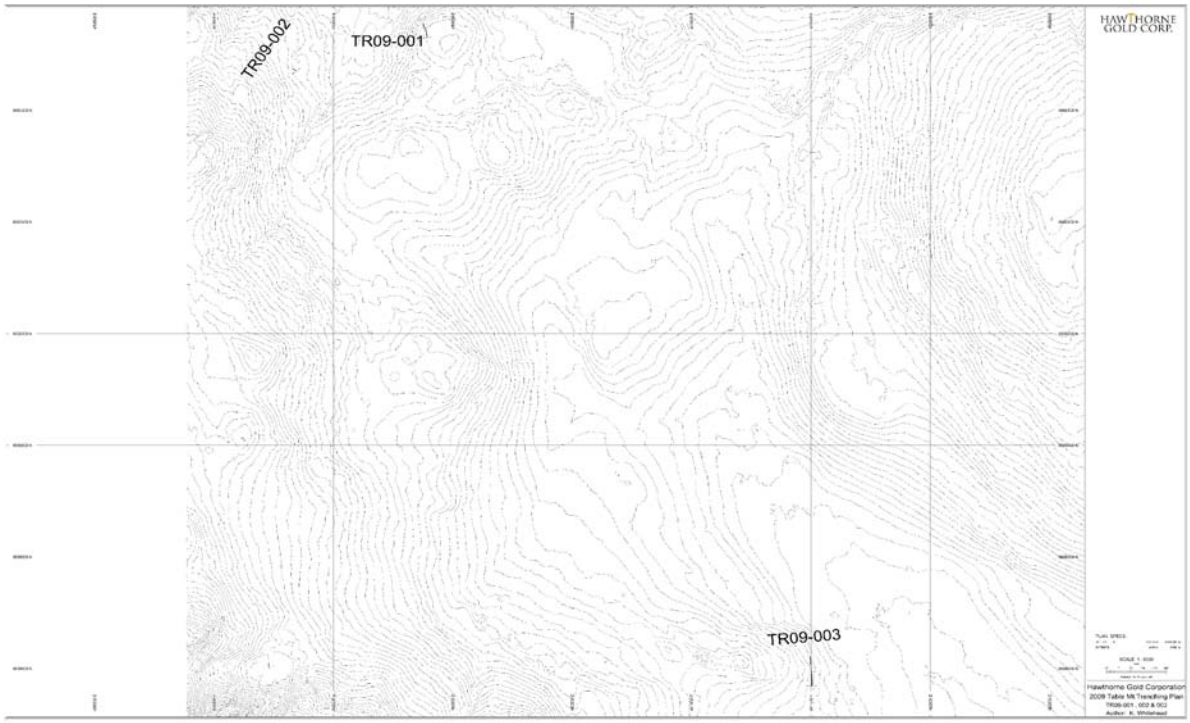

A total of 57 samples were collected over a total length of 195.55 meters from the three trenches. Transportation and equipment used to support the trenching program included: 1 – 250 Kobelco Excavator, one pickup truck provided by Klippan River Services and 1 Toyota pickup truck provided for by Hawthorne Gold. Samples were sent to ALS Chemex of North Vancouver, BC and were shipped via ground transport using Banstra Trucking. Samples were analyzed for gold and multi-elements via Au gravimetric finish and ICPms. Pulps and reject material was returned to site where it is stored in a metal secant shipping container across from the mill's assay lab.

Table 3

2009 Trench Survey Data

Zone	Collar	Easting UTM, Nad 83	Northing UTM, Nad 83	Elevation (m)	Azimuth (corrected)	Dip (degrees)	Total Depth (m)
Katherine	TR09-001	459876.00	6560889.00	1270	180	0	67.80
New Area	TR09-002	459328.00	6560685.00	1255	124	-8	19.80
Pete	TR09-003	461496.70	6558050.14	1184	175	0	127.80

Figure 14: 2009 Plan View Trench Locations Map

3.2 TR09-001

This trench was proposed to follow up on strong Au soil geochem anomalies of 2281-7300ppb. The location of the soil grid is in close proximity to the Katherine Vein which was historically open pit mined along a strike length of 150m. The Katherine Vein was at an orientation of 060 degrees and steeply dipping to the north, which was used to determine the orientation of the trench.

Access to the trench was via a historical road which was cleared using a D8R Cat. The following day, a 250 Kobelco excavator was used to dig the trench with an average depth of overburden of approximately 2 meters. The start point of this trench was surveyed by Underhill Surveying, and the length and variations of the trench trend was surveyed using a handheld compass. The trench orientation roughly north/south and varied very slightly due to ground conditions. Due to the timing of when this trench was cut, melt water and groundwater was constantly flowing into the trench, so logging of the trench contained sporadic 'overburden' thus sampling only took place in the portions of the trench that warranted and accessible.

The rock type noted throughout the trench is a pyroxene porphyry basalt (5Ca), with varying degrees of weak to moderate chlorite alteration throughout with minor episodic silicification. The unit is massive, blocky, dark green to black, fine grained, with 10-15% pyroxene phenocrysts. Locally the unit contains hairline fractures with black siliceous infill, making up less than 5% of the unit. Trace disseminated pyrite is noted within the unit locally.

Jointing through the unit is noted at 338/77, 003/85, and 039/90. Nine veins through the unit were measured at 137/17, 039/85, 282/70, 028/45, 202/75 and four between 250-265/80-85. Over 3.50 meters 5 quartz veins make up a total combined width of 0.57 meters and the 3.50 meters reports a 0.21 g/t Au cumulative grade width with a individual sample containing 0.449 g/t Au within the width. Two of these veins were observed to contain pyrite in trace amounts along their selvages.

The trench contains a total of 7 chip samples and 1 individual grab sample. The chip samples were taken along the orientation of the trench, intersecting veins and the pyritic wall rocks surrounding the vein sections. The grab sample was taken along a small quartz vein that was located in the wall of the trench, but not continuous through the floor.

Sample	mFrom	mTo	Sample Type	Au Assay Value (g/t)	Comments
H126501	2.40	3.50	COMP	0.002	Silicified volcanics, with minor white quartz veins and one rusty quartz vein.
H126502	26.70	26.72	GRAB	0.003	This is a grab sample of a very oxidized (orange and black) quartz vein that has a true thickness of 2cm.
H126503	54.95	55.16	COMP	0.449	Quartz vein with trace disseminated pyrite within it.
H126504	55.16	56.35	COMP	0.198	Sampled the wall rocks between the quartz veins, but the interval does contain minor thin quartz veins within it.
H126505	56.35	56.52	COMP	0.067	A sample of the quartz vein.
H126506	56.52	58.45	COMP	0.026	The wall rocks between the veins, with 2 minor thin quartz veins within.
H126507	58.45	58.59	COMP	0.004	A sample of a quartz vein.
H126508	58.59	59.40	COMP	0.425	The wall rocks outside of the last observed vein before the end of the trench.

3.3 Recommendation

Due to relatively low grade gold values within the few small quartz veins that were sampled no further follow up exploration is warranted.

3.4 TR09-002

Trenching in the area was proposed based on a VLF anomaly not previously explored. The trench was oriented at a strike of 300 degrees so as to be perpendicular to the SSW tabular anomalous structural anomaly. Access to this location utilized a historic road with the final 150 meters of access created with the 250 Kobelco excavator. Historical trenches in the area were noted along the historic road with varying azimuths averaging a 300 degrees strike azimuth. One of the trenches exposed some heavily oxidized and altered volcanics however; none of the trenches exposed the targeted quartz vein material.

The trench was initially dug to a depth intersecting bedrock averaging 1.5 meters depth along a strike length of 19.8 meters. The trench was dug to a depth of 2 meters thereafter until further progress was restricted due to water infilling issues as a result of spring melt. The trench was delayed until better weather conditions amenable to trenching occurred with the intention of it being finished later in the summer. The trench was not revisited in the 2009 year and has not been reclaimed.

The geology encountered within this trench was a relatively unweathered massive and blocky basalt (5Ca). Rock is intensely chloritised and weakly carbonate altered, giving rise to the dark green to black color of the unit. Minor nodules and stringers of black non-magnetic infill mineral is noted which appeared to be commonly associated with trace disseminations of pyrite making up approximately 0.1% of the rock. The unit is very fine grained and mafic rich. The surface of this unit is highly oxidized with the rock almost being completely reduced to soil.

The unit is commonly jointed with structures at 241/82, 256/53, 253/62, and less commonly at 352/84. No quartz veins were exposed, and no significant quartz float material was observed within the overburden material.

A total of three chip samples were taken within the trench. One of the chip samples was taken within the oxidized unit within the volcanics the other two samples were taken as shoulder samples to the oxidized sample.

Sample	mFrom	mTo	Type	Au Assay Value (g/t)	Comments
H126509	10.30	11.30	Comp	0.03	Unaltered volcanics surrounding a high iron oxide zone.
H126510	11.30	12.65	Comp	0.78	Oxidized orange volcanics, very weathered and rotten, almost completely decomposed rocks.
H126511	12.65	13.65	Comp	0.03	Unaltered volcanics surrounding a high iron oxide zone.

3.5 Recommendation

Due to the trench not being completed the current recommendation is to continue as previously planned and complete the trench. It is also recommended that the historical trench in the immediate area be retrenched and sampled so that the geological information and assay values from it can be added to the database as there is no current historical information on this trench in the corporate database.

3.6 TR09-003

The Pete Trench was proposed to find the vein extension to the Cabin Vein. The trench was placed between the listwanite and the volcanics and trenched at 340 degrees azimuth.

Historically, the Cabin Vein, was discovered within listwanite, has an orientation of 088/83, and can be traced for 45 meters along strike. No significant assay values resulted from historical drilling through this vein, however the Pete vein which is in very close proximity to the Cabin Vein reported gold values ranging between 3-6 g/t Au.

Access to the trench location was via a well maintained 4x4 road, which reached to within 50 meters of the trench. On June 7th, the road was cleared of snow and 100 meters of the trench was pre-stripped to assist with drainage. The trench was returned to on July 7th and completed on the same day. Upon attempting to reach bedrock it was determined the depth of overburden which exceeded 5 meters was too much to trench in a safe manner and further trenching this area was suspended. The trench location was subsequently moved further up strike which was topographically higher than the Cabin Vein, where a suitable depth to bedrock was found. The newly located trench was trenched for a total length of 124.80 meters trending roughly north-south. The depth to the bedrock varied and ranged between 10 centimeters to several meters. Bedrock was exposed throughout the entire length of the trench. The bedrock was washed using a small Honda pump and high pressure hose so that mapping could be conducted. Samples intervals were subsequently marked out and channel sampled using a portable diamond blade rock saw.

The trench exposed listwanite from 0 to 92.50 meters with the remaining in volcanics. The listwanite lithology varied with occasional fuchsite silica alteration halos surrounding locations with single quartz veins, or clusters of quartz veinlets.

The listwanite exhibited the typical carbonate alteration observed throughout the property where listwanite is proximal to hydrothermal fluid infiltration. Generally, the unit contained orange carbonate veinlets sporadically throughout. When in contact with the quartz carbonate veins, the listwanite consisted of 10-40% fuchsite and was silicified. Where the unit is more distal from the veins, talc alteration was more prevalent. At this location, the unit is commonly foliated at approximately 307/70.

The volcanics are composed of an intensely chloritised basalt (5Ca), similar to the volcanics mapped throughout the property. The unit is massive, fine to very fine grained and very dark green in color. Veins are common in this unit which are composed both of quartz and or carbonate. Several veins were

mineralized with occurrences of pyrite, chalcopyrite, and tetrahedrite as well as a single occurrence of bornite.

Multiple veins and sets of veining cut through both of the rock units with common strike orientations of 230-260 and or 050-080 depending on dip. Dip was continuously recorded as steep (80-90 degrees) but varied direction either south or north.

Sample	From (m)	To (m)	Sample Type	Au Assay Value (g/t)	Comments

H126556	121.10	122.50	COMP	0.025	Altered wall rocks within the vein zone
H126557	119.00	121.10	COMP	0.025	Quartz dominant vein zone, 2.5m along strike from H126555.
H126558	121.10	122.50	COMP	0.025	Altered wall rocks 2.5m along strike from H126556.

3.7 Recommendation

While there were two significant veined intervals within the listwanite proximal to the contact with the volcanics gold grades reported low. Additional trenching may be warranted with continued targeting along the listwanite-volcanic contact with emphasis exploration in areas demonstrating intense fracturing or faulting.

4.0 Diamond Drilling Program

4.1 OBJECTIVE

The 2009 Table Mountain drill program was conducted with the objective to discover new mineralized veins and bodies to provide as mill feed for on property's fully permitted mill. Drilling was aimed at targeting geophysical delineated targets, mapped local structures as well as to further define the limits of mineralization along the West Bain vein. 2009 drilling was completed in the Katherine, East Bain, Sky Gap and West Bain zones on the property.

4.2 GENERAL INFORMATION

Kluane Drilling Ltd., from Whitehorse, YT, mobilized a single diamond drill rig on May 31st and commenced drilling on the Table Mountain property June 5th. A total of two phases of drilling were

completed on Table Mountain in 2009. The first phase was targeted more distant exploration targets which commenced on June 5th and was completed on July 23rd. Drilling consisted of 11 holes located on the Katherine, East Bain and Sky Gap zones. The second phase of drilling commenced on Table Mountain August 15th and was completed on October 17th. This phase of drilling was intended to explore and define the West Bain vein as well as the immediately surrounding area. Throughout the 2009 drill program old exploration roads where utilized where possible as well as former trails which were cleared, reopened, ditched. Where historical roads did not exist new roads were planned, flagged out and created in order to permit access to planned drill sites. Drill pads were constructed with minimal site disturbance complete with sumps to control drill cuttings return on all drill pads. Drilling was completed on November 12th with the drill crew demobilizing out of camp on November 13. The drill and equipment was left on site stored near the mill and landing locations.

The 2009 drill program consisted of 41 drill holes totaling 7258.82 meters of NTW and 279.50 meters of BTW diamond drill core. BTW core was drilled in TM09-008 from 333.15 to 499.87m and from 330.71 to 443.48m in TM09-009.

4.3 SAMPLING METHOD AND APPROACH

During the drill program each of the 41 Table Mountain drill holes were sampled in 1.00 to 1.50 meter intervals. All vein intercepts with mineralized intervals or prospective core was sampled in holes TM09-001 to TM09-041. Sample boundaries were determined by the logging geologist while logging the core using lithologic boundaries, veining and mineralization changes as determinants. The geologists marked out the sample intervals using lumber crayons and stapled the sample tags to the core boxes at the beginning of each sample interval. The total core samples submitted totaled 2931 and an additional 207 Check Assay Samples for a grand total of 3,138. All core samples were submitted for fire assay and multi-element ICP at ALS Chemex of North Vancouver, BC with check assays subsequently sent to Eco Tech Laboratory Ltd. (Alex Stewart Group) of Kamloops, BC.

4.4 Core Sampling Procedures and Protocols

All drill core was geoteched, geologically logged, digitally recorded and sent for storage in the Vancouver office. Core samples were split into halves using diamond bladed core saws. One half of the core was stored on site in labeled core boxes stockpiled directly behind the logging shack. The remaining half core was placed in sample bags with a corresponding sample tag. The sample bags were placed into rice bags which were safety tag sealed for security purposes and shipped to ALS Chemex labs in North Vancouver, BC using Banstra Trucking.

Samples which were observed to host visible gold (VG) underwent their own unique assay process. The process saw each sample undergo four separate 30 gram fire assays. The four individual gold grades were then averaged to yield the grade of the sample. Visual gold was observed in drill holes TM09-014, TM09-021, TM09-022, TM09-034, TM09-036, TM09-038 and TM09-041.

The detailed core sampling procedures and protocols followed by Hawthorne Gold Corporation were as follows:

1. Drilling blocks were reviewed at each drill shift to ensure depths were correct and in appropriate locations. Both Imperial and Metric hole depths were recorded on the blocks by Kluane Drilling.
2. The drill hole number, box number and starting and ending interval for the box was written in black felt marker on the top left-hand corner and bottom right corner of each box in large, clear letters for photographing.
3. The core was geoteched recording core recoveries, rock-quotient-density measurements (RQD), fracture sets, and all other relevant geotechnical data.
4. Core was then logged core by lithology, alteration, mineralization, veining, and structure.
5. Sample intervals were marked using china markers and sample tags. Core samples were taken generally every 1 to 1.5 m in length with a minimum of 0.10 meters. Sample lengths will be somewhat dependant on lithological breaks and geological discretion.
6. Core cut lines were marked using a china marker and submitted to the photograph room for photographing.
7. Core was photographed with all tags, markers, etc. in place before splitting.
8. Core was split using a diamond bladed core saw in determined sample intervals.
9. Sample numbers were written on sample bag, all samples were double bagged with the sample tag placed between the two bags.
10. Labeling of each box was done with drill hole number, box number and the contained core interval using a 1”x 4” buttersoft tag or Dymo aluminum tape writer.
11. Each ‘rice sack’ was consecutively numbered and sealed with a randomly numbered security tag.
12. The first ‘rice sack’ in the shipment is to contain the Sample Submission Form copy #1. One hole per sample submittal sheet was used to in order to retain more control of shipping, lab reporting and assay results. If the hole exceeded 250 meters the hole required two sample submittal forms. The ‘rice sacks’ are to be transported from camp to ALS Chemex via Banstra Trucking.

4.5 Core Sample Analysis

1. Individual core samples submitted for analysis to the ALS Canada Lab weighed between one to five kilograms based on core sample lengths generally between 1 to 1.5 meters in length, which were cut in half.

2. The entire sample was fine crushed to ≥70% passing 2mm (-10 mesh)

3. The sample was riffle split and crushed to 250 grams

4. The 250 gram sample was pulverized to ≥85% passing 75 microns (-200 mesh)

5. A 30 gram representative pulp was collected leaving behind a 220 gram pulp/reject to be stored.

6. The pulp sample was analyzed for gold using (Au-GRA21) and ICP (ME-ICP41) which tested 35 elements.

4.6 Preparation Duplicate (PD) and Check Assay (CA) Samples

The Preparation Duplicate and Check Assays were completed every 10 samples. For TM09-001 to TM09-006 the Preparation Duplicate and Check Assays were inserted every 10th sample starting at 10 and 11, example 1000010, 1000011, 1000020, 1000021. Samples ending in number 9 contained the original core material while samples ending in 10 and 11 were empty bags with the appropriate sample tag within it. For TM09-007 to TM09-041 the Preparation Duplicate and Check Assays were inserted every 10th sample starting at samples ending in number 9. Samples ending in number 9 contained the original core material the lab would then create a sample A and B for the Preparation Duplicate and Check Assay. No empty bags were submitted with a sample tag designating these samples to be taken when this procedure was invoked. The sample numbers as a result of this procedure would read 100009 as the original sample, 100009A as the Preparation Duplicate, and 100009B as the Check Assay.

Check Assays were completed by Eco Tech Labs of Kamloops, BC and was conducted a rifle split 250 gram crushed sample prepared by ALS Chemex of North Vancouver, BC.

The procedure was as follows:

1. ALS Chemex crush core and split sample into 3, 250 gram samples and remaining reject was stored at ALS Chemex to be later shipped to camp location for more permanent storage.
2. Two of the three samples followed the above procedure at ALS with the third crushed sample being sent to Eco Tech for gold analysis.
3. The first two samples analyzed as above were reported in the database as the original (9) and the Preparation Duplicate (9A).
4. The third received from Eco Tech for similar analysis, defined as the Check Assay reported to the database as sample (9B).

4.7 Sample Preparation using 4FA

1. 4FA analysis was conducted on a 250 gram split of crushed sample using a riffle splitter.
2. The 250 gram sample was pulverized to >85% passing 75 microns (-200 mesh).
3. Four 30 gram representative pulps split from 250 gram pulp.
4. The four representative pulps were then individually fire assayed using (Au-GRA21) and ICP (ME-ICP41) the gold results were averaged to determine the gold assay for the sample and stored in the database as an averaged value.

4.8 Standards and Blanks

Standards were inserted every 25th sample starting on numbers ending on number 25, (example 1000025, 1000050, 1000075, 1000100).

Blanks were inserted every 25th sample starting on numbers ending on the number 1, (example 1000001, 1000026, 1000051, 1000076).

Standards remaining from the 2008 drill program at Frasergold and Table Mountain were used in 2009. The exception to this was a Very High standard which was introduced for the 2009 drill program to address higher grade assays anticipated for the Table Mountain property. The sample standards consisted of the following grades.

CDN-CGS-11 (Low)	0.73± 0.068g/t Au
CDN-GS-2C (Medium)	2.06± 0.15g/t Au
CDN-GS-3D (High)	3.41± 0.25g/t Au
CDN-GS-10C (Very High)	9.71± 0.65g/t Au
CDN-BL-4 (Blank)	<0.01g/t Au

The value of the Standard was written on the sample tag by the geologist and then the correct bag of standard material was inserted into a sample bag by the core cutter. No value of the Standard was indicated to the labs in the process.

DIAMOND DRILLING PROGRAM – INTERPRETATION OF RESULTS AND CONCLUSIONS AND RECOMENDATIONS

4.9 Results

The results of the Table Mountain drill program demonstrated that the West Bain mineralized continues to the west as well as potential continue to exist up and down dip of the current workings. Results have indicated the West Bain has the potential to host high grade dilational pockets along its strike. Drilling also demonstrates grades down dip notably decreased and targeting mineralization past particular depths becomes increasingly difficult. The initial eleven drill holes were targeted veins and zones at depth, most of these drill holes were poorly mineralized with the exception of the Katherine and Sky Gap areas. Drillholes within the Katherine zone hosted large, weakly mineralized veins which were clay altered. Sky Gap TM09-011 reported a 50 meter interval of low grade mineralization located in the upper portion of the drillhole.

West Bain was historically tracked by following a carbonate altered lamprophyre dyke. The dyke was encountered in all of the West Bain drillholes demonstrating its usefulness in tracking the West Bain. Gold mineralization was found to be of the highest grades in areas of vein dilation, small shear zones and or in extensional veins proximal to the West Bain vein. Mineralized zones were observed to quickly

change over short distances away from the West Bain vein. The drilling down dip of the West Bain vein reported mineralization and grades decreases at depth; however, the vein width appears to increase or dilate at depth.

5.0 Conclusions

Based on a single successful drillhole as well as other historical soil grid results the Sky Gap zone continues to demonstrate potential thus additional work including soil sampling, trenching and drilling is recommended. The Sky Gap continues to hold the potential to contain both a low and or high grade resource. A soil grid was planned for the 2008 program but was never completed (Maverick grid). In the 2008 Technical Report on the Table Mountain Property it was recommended that a broad fence drilling be completed in this area to distinguish between the Table Mountain thrust contact and the listwanite contact with the metabasite. This would also determine vectors for gold mineralization in the area. Follow up should be completed on TM09-011.

Further drilling on Table Mountain should be completed to add tonnage and grade in areas such as Bonanza and Katherine, zones west of the Bain, and in surface prospects such as Vollaug, and Sky Gap.

West Bain should be drilled between the well defined areas of TM09-021, and TM09-025 to TM09-041 and the well mineralized vein in TM09-014. This should be done to locate the West Bain vein to the west of TM09-025. When planning these drillholes the faults were intersected in TM09-025 and to the east of TM09-014 which should be taken into future drill planning consideration. Due to the target area being located within a swamp it would be required to be drilled during periods when the ground is frozen. ICP results from the West Bain vein, the vein located up dip of the West Bain and the vein found in TM09-014 should be compared to determine possible relationships. One deep hole is recommended targeting the West Bain zone to follow up on TM09-032 where a large vein intersection was encountered. The deeper hole would be targeting similarities analogous to the Main Mine which demonstrated mineralization at depth.

Historic veins that were previously uneconomic or abandoned should be re-examined for their new economic potential. This includes veins such as the Dino and Big located within the Cusac area. These veins have been shown to be high grade and still host mineralization and would require little work to determine their potential.

East Bain could be further defined to the east starting with where definition drilling left off in 2008. Further drilling would be prudent down dip of the East Bain deposit which could be achieved by underground drilling.

The Pete area has little exploration work completed on it to date. It was recommended in the 2008 Technical Report on the Table Mountain Property that broad fence drilling be completed to define the listwanite-metabasalt contact and to determine vectors for gold mineralization. Follow up may also be warranted on soil sample and trenching anomalies

The argillite-listwanite-metabasalt contact in Beaton Creek (Vollaug) remains under explored to date. A small drill program was recommended in 2008 with 3 drill holes proposed for the 2008 program. Widely

spaced and deep drillholes in the area will determine the depth to the listwanite and will therefore help to better understand the orientation and mineralization of the Vollaug vein to depth.

It is recommended that standards containing anomalous values of other metals should be removed and replaced by standards such CDN-GS-P8 (0.78 g/t Au) and CDN-GS-2F (2.16 g/t Au) which do not contain other anomalous grade elements.

Table 7 below lists the 41 drill holes survey data completed during the 2009 program.

5.1 Recommendations:

Based in this year's work, a $2.6 million dollar exploration program is recommended for 2010 below:

1. A $100,000 dollar sampling program on the Sky/Gap, Prosser, Theresa/Hunter, and Main Mine West areas encompassing maps 01, 19, 27, 12, 13, 8, and 19 respectively in the NTS 104p/5 map index.
2. A $50,000 dollar trenching program over the Sky/GAP area, Prosser, and Main Mine West, and Vollaug area overlaying geochemical high signatures resulting on current compilation work.
3. A $1.5 million dollar near-mine-surface diamond drilling program to assess the remaining potential in the Michelle High Grade, Dino vein, Big vein, Main Mine East Zone, and abandoned open pit systems that were not completed to depth due to limited surface mining methods.
4. A $500,000 dollar exploration drill program in the Prosser, Pete, and Sky/Gap area in the late summer-early fall.

6.0 Statement of Expenditures

I, Kristian L. Whitehead, an employee of Hawthorne Gold Corporation, Suite 1580 – 505 Burrard Street, Box 72, Vancouver, BC, Canada, V7X 1M5, do solemnly declare that field reconnaissance, soil sampling, rock and chip sampling, surveying, airborne geophysics, diamond drilling, and logistical support costs for undertakings carried out on the aforementioned claims (see Table 1) between the dates of May XX & December 23, 2009 were as follows:

Type of Work	Diamond Drilling Program - Kluane Drilling Contract	
Dates	June 5th - July 23rd & August 15th - October 17th	
Calendar Days Worked		113
Man days		565
Meters Drilled		7535.27
Average cost per meter		89.50
Subtotal		$674,406.67
Drilling Supplies		$79,430.10
Core Boxes		$20,225.70
Heavy Equipment		$37,190.00
Work Costs Total		$811,252.47
Food & Accommodation (per day)		$50.00
Food & Accommodation Total		$28,250.00
Drilling Direct Costs Total		**$839,502.47**

Type of Work	Core Logging & Processing Program	
Dates	June 5th - July 23rd & August 15th - October 17th	
Number of Personnel		13
Personnel Names	Kristian Whitehead, Senior Project Geologist	
	Mallory Dalsin, Geologist	
	Stephanie Nicholls, Geologist	
	Ehsan Salmabadi, Geologist	
	Edward Dashwood, Geologist	
	Ross Easterbrook, Part time drill Geologist	
	David Cox, Part time drill Geologist	
	Kelley Wynne, Part time drill Geologist	
	Darcy Kowalski, Geotechnician	
	Matthew Huszar, Geotechnician	
	Devin Tompkins, Part time Core Cutter	
	Bryan Falbridge, Part time Core Cutter	
	Michelle Labelle, Core Cutter	

Calendar Days Worked	113
Man Days	375
Food & Accommodation (per day)	$50.00
Average Cost per man day	$300.00
Total Cost per man day	$112,500.00
Cost of logging materials and supplies	$15,325.00
Core Racks	$22,579.74
Cost of assaying	$96,848.03
Direct Geological Drilling Support cost	**$247,253.61**
Total Drilling Cost	**$1,086,756.08**

Breakdown of Expenditures

Type of Work	Trenching	
Dates	June 3rd to July 10th	
Calendar Days Worked		8
Man days		8
250 Kobelco Excavator hours		49
Average cost per man day		$300.00
Total cost for man days		$2,400.00
D8R Caterpillar hours		8
D8R Caterpillar rate per hour		$180.00
Total D8R Caterpillar cost		$1,440.00
250 Kobelco Excavator cost per hour		$140.00
Total 250 Kobelco Excavator cost		$6,860.00
Total Direct Equipment Cost		**$10,700.00**

Dates	Mapping and Sampling, Geological Support for Trenching Program	
Number of Personnel	June 3rd to July 10th	
Personnel Names		13
	Ehsan Salmabadi, Geologist	
	Edward Dashwood, Geologist	
	Nick Bazowski, Geologist	

Calendar Days Worked	9
Man Days	19
Food & Accommodation (per day)	$50.00
Total Food & Accommodation cost	$950.00
Average Wage Cost per man	$242.00
Total Wage Cost	$4,598.00

Assay Cost of 57 samples collected	$1,582.76
Cost of shipping	$159.60
Reporting costs	$1,860.00
Supplies	$925.00
Direct Geological Trenching Support cost	$5,477.36
Total Drilling Cost	$16,177.36

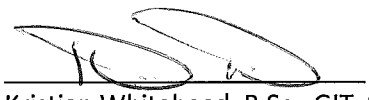

Soil Sampling & Regional Mapping Program

Man Days	97
Food & Accommodation (per day)	$50.00
Total Food & Accommodation cost	$4,850.00
Average Wage Cost per man	$242.00
Total Wage Cost	$23,474.00
Total Soil Samples taken:	1545
Total Rock Samples taken:	23
Total Shipping Cost:	$548.09
Totally Assay Cost(From ALS spreadsheet):	$37,840.79
Kraft Bags:	$386.25
Ore Bags:	$44.38
Rice Bags:	$10.00
Gas:	$400.00
Total Regional Program Cost	$67,553.51
Grand Total Cost for 2009 Season Work	**$1,170,486.95**

I make this solemn declaration conscientiously believing it to be true and knowing that it is of the same force and effect as if made under oath and by virtue of the Canada Evidence Act.

Declared before me at Vancouver in the Province of British Columbia this 12th day of January, year 2010.

Respectfully Submitted,

Kristian Whitehead, B.Sc., GIT, Senior Project Geologist

7.0 Statement of Qualifications

I, Kristian L. Whitehead, resident of North Vancouver, British Columbia, do certify that:

1. I graduated from the University of Victoria in May 2004 with a B.Sc. in Earth and Ocean Sciences;

2. From November 2006, I have been registered as a Geologist In Training, G.I.T., with the Association of Professional Engineers and Geosciences of British Columbia (Reg. No. 143538);

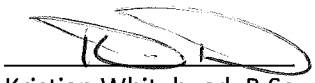

3. From 2003 to present, I have been actively engaged in mineral exploration in British Columbia and the Yukon Territory;

4. I am presently employed with the Hawthorne Gold Corporation as Senior Project Geologist;

5. I have personally participated in the logistical support, fieldwork and analysis of data for the filed undertakings herein.

6. I presently hold options in Hawthorne Gold Corporation prior to and during the disclosure of this report.

Respectfully Submitted,

Kristian Whitehead, B.Sc., GIT, Senior Project Geologist

CERTIFICATE VA09058208

Project: H1002

P.O. No.: HGC 279

This report is for 111 Soil samples submitted to our lab in Vancouver, BC, Canada on 16-JUN-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

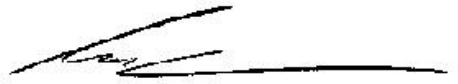

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
SCR-41	Screen to -180um and save both

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION
ME-MS41	51 anal. aqua regia ICPMS

To: **HAWTHORNE GOLD CORP.**
ATTN: ANGEL LEE

CERTIFICATE VA09063630

Project: H1002

P.O. No.:

This report is for 5 Rock samples submitted to our lab in Vancouver, BC, Canada on 19-JUN-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

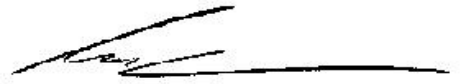

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-21	Sample logging - ClientBarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

CERTIFICATE VA09073357

Project: H1002

P.O. No.: HGC 368

This report is for 97 Soil samples submitted to our lab in Vancouver, BC, Canada on 14-JUL-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
SCR-41	Screen to -180um and save both
LOG-23	Pulp Login - Rcvd with Barcode

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
ME-MS41	51 anal. aqua regia ICPMS

CERTIFICATE VA09074773

Project: H1002

P.O. No.: HGC-0388

This report is for 136 Soil samples submitted to our lab in Vancouver, BC, Canada on 17-JUL-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
SCR-41	Screen to -180um and save both
LOG-23	Pulp Login - Rcvd with Barcode

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
ME-MS41	51 anal. aqua regia ICPMS	

To: **HAWTHORNE GOLD CORP.**
ATTN: ANGEL LEE

CERTIFICATE VA09083644

Project: H1002

P.O. No.: HGC 0483

This report is for 17 Soil samples submitted to our lab in Vancouver, BC, Canada on 6-AUG-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
SCR-41	Screen to -180um and save both
LOG-23	Pulp Login - Rcvd with Barcode

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA23	Au 30g FA-AA finish	AAS
ME-MS41	51 anal. aqua regia ICPMS

Project: H1002

P.O. No.: HGC 0413

This report is for 3 Rock samples submitted to our lab in Vancouver, BC, Canada on 27-JUL-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-21	Sample logging - ClientBarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09058205

Project: H1002

P.O. No.:

This report is for 54 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 16-JUN-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

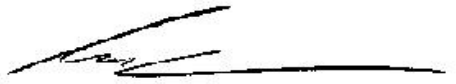

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09058206

Project: H1002

P.O. No.:

This report is for 33 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 19-JUN-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09063406

Project: H1002

P.O. No.: HGC 279

This report is for 31 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 16-JUN-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09064977

Project: H1002

P.O. No.: HGC 295

This report is for 38 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 26-JUN-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09064978

Project: H1002

P.O. No.: HGC 299

This report is for 99 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 23-JUN-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

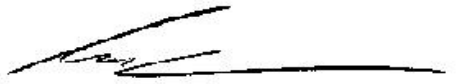

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES
ME-OG46	Ore Grade Elements - AquaRegia	ICP-AES
Cu-OG46	Ore Grade Cu - Aqua Regia	VARIABLE

CERTIFICATE VA09065429

Project: H1002

P.O. No.: HGC 306

This report is for 54 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 26-JUN-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09067792

Project: H1002

P.O. No.:

This report is for 61 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 30-JUN-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES
ME-OG46	Ore Grade Elements - AquaRegia	ICP-AES
Cu-OG46	Ore Grade Cu - Aqua Regia	VARIABLE

CERTIFICATE VA09067793

Project: H1002

P.O. No.:

This report is for 33 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 30-JUN-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

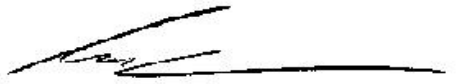

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09071090

Project: H1002

P.O. No.: HGC-0335

This report is for 59 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 13-JUL-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09072250

Project: H1002

P.O. No.: PO 325

This report is for 61 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 10-JUL-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

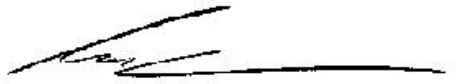

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES
ME-OG46	Ore Grade Elements - AquaRegia	ICP-AES
Cu-OG46	Ore Grade Cu - Aqua Regia	VARIABLE

CERTIFICATE VA09073358

Project: H1002

P.O. No.: HGC 368

This report is for 121 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 14-JUL-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES
ME-OG46	Ore Grade Elements - AquaRegia	ICP-AES
Cu-OG46	Ore Grade Cu - Aqua Regia	VARIABLE

CERTIFICATE VA09077134

Project: H1002

P.O. No.: HGC 0413

This report is for 72 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 27-JUL-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09080195

Project: H1002

P.O. No.: HGC 460

This report is for 63 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 4-AUG-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09083647

Project: H1002

P.O. No.: HGC 0483

This report is for 92 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 6-AUG-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES
ME-OG46	Ore Grade Elements - AquaRegia	ICP-AES
Cu-OG46	Ore Grade Cu - Aqua Regia	VARIABLE

CERTIFICATE VA09093528

Project: H1002

P.O. No.: HGC0472

This report is for 35 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 31-AUG-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09093529

Project: H1002

P.O. No.: HGC0472

This report is for 95 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 31-AUG-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
CRU-QC	Crushing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES
ME-OG46	Ore Grade Elements - AquaRegia	ICP-AES
Cu-OG46	Ore Grade Cu - Aqua Regia	VARIABLE

CERTIFICATE VA09095455

Project: H1002

P.O. No.: HGC 0472

This report is for 33 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 1-SEP-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09095456

Project: H1002

P.O. No.: HGC 0472

This report is for 101 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 1-SEP-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

To: **HAWTHORNE GOLD CORP.**

CERTIFICATE VA09097221

Project: H1002

P.O. No.: HGC 0472

This report is for 44 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 8-SEP-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09097222

Project: H1002

P.O. No.: HGC 0472

This report is for 52 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 8-SEP-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09098578

Project: H1002

P.O. No.: HGC 0472

This report is for 148 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 9-SEP-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES
ME-OG46	Ore Grade Elements - AquaRegia	ICP-AES
Cu-OG46	Ore Grade Cu - Aqua Regia	VARIABLE

CERTIFICATE VA09098582

Project: H1002

P.O. No.: HGC0472

This report is for 35 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 9-SEP-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

P.O. No.: HGC0472

This report is for 20 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 16-SEP-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

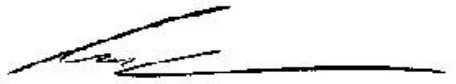

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
SPL-21q	Split sample - quadruplicate
PUL-31d	Pulverize Split - duplicate
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES
Au-AVG	Average gold result

CERTIFICATE VA09101393

Project: H1002

P.O. No.: HGC0472

This report is for 36 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 16-SEP-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09104128

Project: H1002

P.O. No.: HGC

This report is for 34 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 18-SEP-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09104129

Project: H1002

P.O. No.: HGC

This report is for 87 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 18-SEP-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES
ME-OG46	Ore Grade Elements - AquaRegia	ICP-AES
Cu-OG46	Ore Grade Cu - Aqua Regia	VARIABLE

CERTIFICATE VA09104180

Project: H1002

P.O. No.: HGC

This report is for 80 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 18-SEP-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09106918

Project: H1002

P.O. No.: HGC 0472

This report is for 58 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 28-SEP-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES
ME-OG46	Ore Grade Elements - AquaRegia	ICP-AES
Cu-OG46	Ore Grade Cu - Aqua Regia	VARIABLE

CERTIFICATE VA09109509

Project: H1002

P.O. No.: HGC 0472

This report is for 36 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 5-OCT-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09110080

Project: H1002

P.O. No.: HGC 0472

This report is for 76 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 5-OCT-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09111207

Project: H1002

P.O. No.: HGC 0472

This report is for 127 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 7-OCT-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES
ME-OG46	Ore Grade Elements - AquaRegia	ICP-AES
Cu-OG46	Ore Grade Cu - Aqua Regia	VARIABLE

CERTIFICATE VA09113588

Project: H1002

P.O. No.: HGC

This report is for 60 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 13-OCT-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09113589

Project: H1002

P.O. No.: HGC

This report is for 55 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 13-OCT-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09114688

Project: H1002

P.O. No.: HGC

This report is for 124 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 15-OCT-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES
ME-OG46	Ore Grade Elements - AquaRegia	ICP-AES
Cu-OG46	Ore Grade Cu - Aqua Regia	VARIABLE

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

To: **HAWTHORNE GOLD CORP.**
ATTN: WILLIAM HAY
SUITE 1580 ONE BENTAL CENTRE

CERTIFICATE VA09116125

Project: H1002

P.O. No.: HGC

This report is for 65 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 19-OCT-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09116471

Project: H1002

P.O. No.: HGC 0472

This report is for 35 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 21-OCT-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09116910

Project: H1002

P.O. No.: HGC

This report is for 72 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 19-OCT-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09117577

Project: H1002

P.O. No.: HGC 0472

This report is for 67 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 21-OCT-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09117578

Project: H1002

P.O. No.: HGC

This report is for 63 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 21-OCT-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES
Ag-OG46	Ore Grade Ag - Aqua Regia	VARIABLE
ME-OG46	Ore Grade Elements - AquaRegia	ICP-AES
Cu-OG46	Ore Grade Cu - Aqua Regia	VARIABLE

CERTIFICATE VA09118077

Project: H1002

P.O. No.: HGC 0472

This report is for 103 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 23-OCT-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES
Ag-OG46	Ore Grade Ag - Aqua Regia	VARIABLE
ME-OG46	Ore Grade Elements - AquaRegia	ICP-AES
Cu-OG46	Ore Grade Cu - Aqua Regia	VARIABLE

CERTIFICATE VA09119961

Project: H1002

P.O. No.: HGC 0472

This report is for 46 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 23-OCT-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09119962

Project: H1002

P.O. No.: HGC 0472

This report is for 4 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 23-OCT-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
SPL-21q	Split sample - quadruplicate
PUL-31d	Pulverize Split - duplicate
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES
Au-AVG	Average gold result

CERTIFICATE VA09121166

Project: H1002

P.O. No.: HGC0472

This report is for 61 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 28-OCT-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES
ME-OG46	Ore Grade Elements - AquaRegia	ICP-AES
Cu-OG46	Ore Grade Cu - Aqua Regia	VARIABLE

CERTIFICATE VA09121834

Project: H1002

P.O. No.: HGC0472

This report is for 55 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 28-OCT-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09121835

Project: H1002

P.O. No.: HGC0472

This report is for 4 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 28-OCT-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
SPL-21q	Split sample - quadruplicate
PUL-31d	Pulverize Split - duplicate
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES
Ag-OG46	Ore Grade Ag - Aqua Regia	VARIABLE
ME-OG46	Ore Grade Elements - AquaRegia	ICP-AES
Au-AVG	Average gold result
