Geochemical Sampling, Trenching, and Diamond Drilling Assessment Report for the 2009 Taurus Property, Mc Dame Creek Area , Liard Mining District, Northern British Columbia.

Prepared For
Hawthorne Gold Corporation
Suite 1580, One Bentall Centre
Vancouver, BC Canada
V7X 1M5

Event Number: 4469061

Mine Permit No: MX-1-655

Liard Mining Division, British Columbia

NTS Map Sheet 104P05E
BCGS Map Sheets 104P032, 104P033, 104P022 & 104P023

59 degrees 16' 28" latitude and 129 degrees 41' 22" longitude
Or 6570815N, 460706E, UTM Zone 09 NAD 83

Dates of Work: May 1st – December 31st, 2009

Ownership of Claims: Hawthorne Gold Corporation

Prepared by: Kristian Whitehead, B.Sc., GIT, Sr. Project Geologist, Hawthorne Gold Corporation

Submitted: February 9th, 2010

1.0 Introduction

The Taurus project area is approximately 6 kilometers north of the Main Mine and contains the historic Taurus-Hearn, Sable, and Plaza portals and underground workings. The project area also contains current exploration areas (such as 88 Hill, 88 Hill West, and HWY Zone). The Taurus project areas are known to host very narrow quartz-vein sets with moderate to high grade gold and low grades of gold contained within sulphide wall rock. Overall, the Taurus project area is perceived as a low grade bulk tonnage deposit with an inferred mineral resource of 1,040,886 ounces of gold at 1 gpt in 32,386,000 tonnes[1].

The proximal Table Mountain project areas contain the historic Erickson Gold Mines mine-site located adjacent to the southern shores of McDame Lake, historic underground workings at the Main Mine area along Erickson Creek, historical portals used to mine and access the Vollaug vein on top of Table Mountain and east of the Main Mine, and the Cusac and Bain Portals approximately 8 kilometers south of the Main Mine. The Table Mountain project areas are known to host narrow quartz-veins with high-grade gold. Currently, the East Bain deposit hosts a minable indicated resource of 13,708 ounces gold at 0.62 opt gold in 22,157 tons. An additional inferred resource of 4,717 ounces gold at 3.70 opt gold in 1,276 tons is suggested[2]. No other mineral resource is currently defined on the Table Mountain project area.

The intent of the 2009 exploration year was to reassess the overall scope Taurus property and to conduct exploration and test pit work on high grade areas within the previously determined 43-101 resource. The exploration season was comprised of relogging and sampling of some historical core, soil sampling, rock & chip sampling, surveying, trenching, diamond drilling, metallurgical testing and finally test pit mining which supported a 10,000 ton bulk ore sample. The intent of the 2009 program was to gather a better understanding of the deposit and further determine its potential for independent production or potential to be incorporated into production at the adjacent Table Mountain property which has a fully permitted mill.

1.1 Location

The Taurus property is located in the Liard Mining Division, Northern British Columbia, on NTS map sheet 104P05E BCGS map sheets 104P032, 104P033, 104P022 & 104P023 or at 59 degrees 16’ 28” latitude and 129 degrees 41’ 22” longitude or 6570815N, 460706E, UTM Zone 09 NAD 83 (Figure 1).

The Taurus Deposit lies within the Cassiar Gold Property which covers approximately 17,500 hectares (ha) located in the Liard Mining Division, north-central British Columbia, approximately 8 kilometers (km) east of the former town site of Cassiar, BC, 117 km north of Dease Lake, B.C., and 141 km south of Watson Lake, Yukon Territory.

Access to the property is via highway travel and chartered fix wing into the Cassiar airstrip (in the abandoned township of Cassiar, 15 kilometers northwest of Jade City).

[1] Wardrop Engineering Inc., Technical Report on the Taurus Deposit for Cusac Gold Mines Ltd., May 15, 2007

1.2 Physiography

The town of Cassiar was decommissioned after the asbestos mine in Cassiar was forced to shut down in 1992. Power for the region has historically been and will in the future need to be provided by privately owned diesel generators. Proposals for a run-of-river hydroelectric project was put forth by local groups in the area in 2008 but no final decisions have yet been made.

Access into the project area is by highway access. Chartered flight can be made into the Cassiar airstrip, located at coordinates 453738 E, 6571429 N. From the Stewart-Cassiar Highway, access into the mine site is by compact gravel road. Beyond the mine site, the remainder of the property can be accessed by hauling roads and dirt trails. ATV's and all wheel-drive vehicles are required for access to the remote areas of the property.

The Cassiar Gold Property is situated at the confluence of Quartzrock and Troutline Creeks; immediately north of McDame Creek. The latter forms a broad valley in moderate terrain with shallow lakes and swampy sections, ranging in elevation from 1000 m to 1230 m above sea level (masl). The regional topography is quite mountainous, with the peak of Mount Robertson rising to about 2000 masl approximately 3 km to the northeast. The property is covered by a moderate-to-heavy growth of jack pine, lodge pole pine, black spruce, and poplar thinning to buck brush and alpine meadows above tree line, around 1400 m.

Climate is typical of northern British Columbia and the Yukon with long, cold winters and snow at any month of the year. Daily mean temperatures at Dease Lake, 100km to the south of the property, range from -17.7°C in January to +12.6°C in July. Snowfall can be expected between October and May with a total accumulation of 227 centimeters (cm). On the property, snow can persist until late May; however, snow removal is relatively simple, allowing for year-round operation.

1.3 Property

213 mineral claims located on the Cassiar Gold property, comprising both Table Mountain and Taurus project claims with 111 claims comprising the Taurus property. The claim tenure numbers, names, expiry dates, areas, and tag numbers that comprise the Taurus property are all currently in good standing are listed in Table 1. Figure 2 is a tenure location map of the Taurus property claims.

Hawthorne controls the mineral rights to a total of 53,667 hectares (132,614 acres) with the Cassiar Gold Property. The Table Mountain project area covers contiguous mineral claims of approximately 37,123 hectares. The adjacent Taurus project area covers contiguous mineral claims of approximately 15,629 hectares. The claim group optioned from American Bonanza Gold Corp. covers 915 hectares.

1.4 Infrastructure

The Cassiar branch of Highway 37, the Stewart-Cassiar Highway, provides paved access across the property. A series of reclaimed roads and trails can be reopened to afford relatively easy access to most of the property.

General supplies and services are available in Dease Lake and Watson Lake, 117 km to the south and 141 km to the north, respectively. Charter air service is available to both Dease Lake and Watson Lake. The Cassiar airstrip is available for small charter aircraft. The nearest major centers are Whitehorse, Yukon, approximately 560 km to the west, and Smithers, B.C., almost 720 km south.

The Taurus Property is located in a district with a long mining history. The town of Cassiar housed employees of the Cassiar asbestos mine. Watson Lake was home to many employees of Canada Tungsten in the 1970's and 1980's and again recently. Dease Lake inhabitants have worked recently at Golden Bear near Telegraph Creek as well as at both Taurus and at the Cusac (formerly Erickson) Mine only a few kilometers to the south. However, there is a small population base in the area requiring that most personnel for a new mining operation would have to be brought in from elsewhere.

The town of Cassiar has been sold and only a few residents remain. Power for the region was historically and will in the future have to be provided by diesel generators, unless the B.C. Hydro grid is extended north. There are numerous creeks in the property area that have sufficient year-round flow for any exploration or mining operation. The property itself affords space for the development of tailings storage areas, waste disposal sites, heap leach pads, if required, and expanded processing facilities.

1.5 Exploration & Production History

1.5.1 1874 TO 1980

The Cassiar area was first explored by placer miners in 1874, nearly 25 years before the Klondike gold rush. These miners followed the gold up from the Pacific to McDame Creek and by 1895 had produced 2.2 million grams. Gold-quartz veins were discovered in Troutline Creek in 1934, leading to the discovery of many more veins that led to the establishment of several small gold mining operations.

The Taurus Mine was originally covered by seven claims of the Cornucopia Group staked by J.C. Simpson in 1935. Simpson carried out stripping, trenching and rock sampling until 1944. The following year, Benroy Gold Mines Ltd. optioned the property and completed more than 700 m of trenching and 1500 m of diamond drilling.

In 1949, a GSC mapping crew first encountered the Cassiar asbestos deposit on McDame Mountain. A small 500 tonnes per day (t/d) plant was built and in operation by 1952 using an access road to the Alaska Highway. The asbestos fibre produced was shipped from Whitehorse in the Yukon and all of the supplies for the mine were brought in that way. Eventually, Highway 37 was constructed between Stewart and Cassiar, which gave access to supplies from Smithers or Terrace. Fibre was shipped from Stewart with backhauls of diesel for power and heat.

Between 1960 and 1990, Cassiar provided the best infrastructure north of Stewart and west of Fort Nelson, with the exception of Whitehorse. Unfortunately, the town was sold off when government loan guarantees were not extended and the mine was forced to close.

The claims were restaked in 1959 by Couture and Copeman who hand-mined 25 t of high-grade ore from a short adit. In 1960, Cornucopia Explorations Ltd. Was incorporated to acquire the property. The following year, Cornucopia changed names to Hanna Gold Mines Ltd. and proceeded with 1,180 m of drifting and crosscutting, and 1,000 m of diamond drilling. By the end of 1963, an “indicated reserve” of 72,500 t grading 22.6 grams per tonne (g/t) gold had been outlined (Gunning, 1988). The methodology and reliability of that resource figure has not been verified, and it is likely that mineral inventory was subsequently mined out.

These resource estimates do not follow the required disclosure for reserves and resources outlined in NI 43-101. These resource estimates were not created using the standards outlined in NI 43-101; the resource estimates have been obtained from sources and are relevant. No effort has been made to refute or confirm these estimates, and they can only be described as historical estimates.

In 1964, Newconex Canadian Exploration Ltd. optioned the property and completed an additional 180 metres of drifting and crosscutting, and 210 m of drilling. In 1972, Hanna Gold Mines became Dorchester Resources Ltd. and rehabilitated and resampled the main 3600 level adit, and completed another 223 m of underground diamond drilling between 1973 and 1975. In 1978, Ashlu Gold Mines Ltd. optioned the property and completed 7.2 km of ground-based magnetometer and electromagnetic surveys. In 1979, United Hearne Resources Ltd. optioned the property and continued underground development and drilling, confirming a “reserve”.

1.5.2 1980 TO PRESENT

A 135 t/d mill was constructed at the Taurus Mine in 1980-81, treating 220,000 t of ore, averaging 5.14 Au (g/t) prior to closing in 1988. During this time the Erickson mine also maintained a similar operation. It is now owned by Hawthorne. The Plaza and Sable workings, south of the highway, were developed between 1980 and 1994 but recorded no production. During the time of the mine operated, exploration was limited to areas proximal to existing workings. This meant primarily the veins located above the Decline Fault. A few holes, however, did penetrate the decline fault and several pyrite veins were intersected. A rhyolite unit was also encountered.

After the closure of the Taurus mine, several companies explored other mineralized areas of the property that were not actively explored during the time of operations. Geochemistry, geophysics, and more than 25,000 m of drilling were completed between 1993 and 1997. Companies involved included Sable Resources Ltd., International Taurus Resources Inc., Hera Resources Inc., Cyprus, Cusac, and finally Navasota Resources in 2003.

In 1988, drilling in the 88 Hill area discovered the 1988-1 and 1988-2 vein systems. Hole 88- 5 intersected 5.99 Au (g/t) over 12.34 m; subsequently, a small open pit extracted 2,600 t grading 2.06 Au (g/t) from the 1988-2 vein. The 1994 drill program, completed by International Taurus, totaled 7,592 meters in 88 holes, predominantly on the north side of the highway, west along strike from the Taurus workings, dubbed the Taurus West zone.

Drilling, mainly NQ size, encountered a mineralized zone locally over 200 feet in width, consisting of a quartz stockwork system in a broad zone of pyritic altered basalt. An example of this mineralization is recorded in drill hole, 94-56 which intersected 1.6 Au (g/t) over 44.5 m core length. In 1995 & 1996, Cyprus conducted an extensive diamond drilling program of 12,692 m in 79 holes concentrated in the Taurus West, 88 Hill, and Taurus Mine areas. In March 1995, four holes drilled on section 1100W intersected long intervals of disseminated pyrite mineralization that included 2.47 Au (g/t) over 86 m in T95-29 in the Taurus West area. Cyprus also drilled five RC holes totaling 826m. Unfortunately, continuity between holes and poor metallurgical test recoveries resulted in lower emphasis being placed on Taurus West as a target in subsequent programs.

Both diamond core and reverse circulation (RC) percussion drills have been used on the property with Taurus International drilling an additional 48 RC holes totaling 5,333m. Variable core recoveries have resulted in some statements that RC is the preferred technique. Broughton and Masson (1996) concluded that these variances between core and RC holes in disseminated pyrite mineralization were the result of statistical variation, systematic overestimation of grade due to contamination in RC samples, and/or a more representative sample from RC due to the greater sample size. No firm conclusion can be made from their study.

In late 2003, Navasota Resources Limited conducted a two-phase program consisting firstly of general geological compilation with some geochemistry, as well as limited remapping and re-logging of specific core. Phase II consisted of a drill hole program made up of 13 NW holes totaling 1,974 m in length. The holes were designed to test the zones identified in post-1994 work. In general terms, these results confirmed the results reported in previous programs on the Taurus Deposit. The zones intersected in the

2003 program do not seem to match up identically with those from previous work; therefore, more work is needed to understand the nature of the zones on the property. Difficulties arising from the high nugget affect associated with the T4 mineralization may be the cause of this, and some small test pits and/or underground sampling may be needed to understand the geology better. In mid 2007, Hawthorne completed a drill hole program made up of six HQ and four NQ holes totaling 1,638.61 m in length. The objective was to improve the confidence and continuity of both the grade and structure of the 88-Hill Zone portion of the Taurus Deposit and to improve the understanding of the geological setting and controls on gold mineralization within the known gold zones on the Taurus Property. In December of 2008, Hawthorne completed a deal with American Bonanza to acquire a 100% interest in 46 claims covering the remainder of the Taurus property.

1.5.3 HISTORIC ESTIMATES

These estimates are not compliant with National Instrument 43-101 and in the context of CIM standards on mineral resources and reserves would be considered to be conceptual in nature. These resource figures are disclosed only for historical context and should not be used outside this context.

Early resource and reserve work on the Taurus Deposit focused exclusively on the Taurus Mine. From 1960, exploration and development attempted to prove up mineable ore reserves in small high-grade zones within a very small area. By the end of 1963, an “indicated reserve” of 72,500 t grading 22.6 Au (g/t) had been outlined (Gunning, 1988). Then in 1979, United Hearne Resources Ltd. optioned the property and continued underground development and drilling, confirming a “reserve” of 60,000 t grading 16.1 Au (g/t). Late in 1993, International Taurus Resources Inc. acquired the Sable ground and drilled 26 tightly spaced (10-25 m) diamond drill holes totaling 1,554 m on the east side of 88 Hill. A “potential resource” of 436,000 t in individual narrow quartz veins grading 6.99 Au (g/t) was reported by Spencer (1994).

In 1995, Cyprus entered the project to develop an open pit, high tonnage resource. Their work, which included 78 generally widely spaced diamond drill holes, confirmed that a large, low-grade resource is present. A preliminary resource calculation gave an inferred, undiluted mineral inventory of 38 (Mt) grading 1.42 Au (g/t) calculated for the 88 Hill, Taurus West, and Highway Zones. A second calculation utilized the same data but a different set of assumptions came up with a potential resource of 40.6 Mt grading 1.07 Au (g/t). Both calculations are considered to have a low degree of accuracy due to the wide drill spacing and a lack of information on the geometry and continuity, that is, the structural controls of mineralized zones. These estimates demonstrated the possible existence of potentially bulk mineable resource on the property.

Trenaman (1997) completed a resource estimate for the 88 Hill zone on behalf of International Taurus following the 1996 infill-drilling program. This calculation utilized diamond drill hole results from the 1995 Cyprus program and the 1996 International Taurus reverse circulation and diamond drill hole program. A sectional method was employed, with data plotted on sections drawn every 50 to 100 m. The “drilling indicated reserve” applies to the portion of 88 Hill area drilled on 50-metre centers. Sections run from 500W to 1000W, blocks were projected up to 25 meters east and west of the section with generally vertical north and south block boundaries.

In 1999, Cusac completed another resource calculation. Cusac defined six distinct zones using factors including geography, geology, data density, and apparent amenability to open pit mining methods. These include the 88 Hill, 88 West, Plaza, Sable, Highway Zone, and Taurus West. Cusac estimated a total

of 23.4 Mt grading at 1.06 Au (g/t) at a reported 1.0 Au (g/t) cutoff for 88 Hill, 88 West, and Highway. The database includes 130 drill holes. Gemcom Software was used to calculate a total mineral inventory. Details on the modeling procedure were not made available to the author, so no comment on the validity of the Cusac resource calculation is offered, except to say that it compares well with the Trenaman estimation for the 88 Hill area (discussed above). It should be noted that the Cusac resource estimate was made public on June 22, 1999 and was described as a "total mineral inventory".

In 2006 & 2007, Wardrop generated the first NI 43-101 compliant mineral resource estimate for the Taurus deposit. The results were presented in for Cusac, dated May 15, 2007. The Mineral Resource Estimate is summarized below in Table 2.

Table 2 2007 Taurus Inferred Mineral Resources Estimate at 0.50 Au (g/t) Cutoff

Zone Name	Tonnes (000's)	Average Grade (Au (g/t))	Contained (oz Au)
Sable	1,350	1.32	57,339
88 Hill	8,505	1.15	315,797
88 West	13,102	0.87	366,930
Highway	2,456	0.98	77,276
Taurus West	3,709	1.02	121,056
Taurus	2,348	0.99	74,489
Plaza	917	0.95	27,999
Total	**32,386**	**1.00**	**1,040,886**

Wardrop Engineering Inc., Technical Report on the Taurus Deposit for Cusac Gold Mines Ltd., May 15, 2007

2.0 Regional Soil Sampling Program

During the 2009 field season 1,177 samples were collected from 3 separate grids. Grid lines were spaced at 100 meter intervals perpendicular to a baseline. Samples were collected at 50 meter intervals along each grid line. Samples were collected from the B horizon whenever possible and packaged into kraft bags, dried, packaged into rice bags, security tagged and sent to ALS Chemex of North Vancouver via Banstra Trucking. Analysis conducted on each sample included 32 element ICP and 30 gram Au fire assay. Gold analysis completed from ALS Chemex was using a method named Au-AA23 which had a Au detection limit of 0.005 ppm. The only exception of this analysis was on samples collected from the Bam Bam Grid which used AU-ICP21 analysis with a Au detection limit of 0.001 ppm.

2.1 Bam Bam Soil Grid

The Bam Bam Grid was conducted over the NE trending Rich vein. The grid was designed to resample and expand on a historical grid which reported several anomalous gold values. The grid covers unknown age basalts and tuffs in the west and Pennsylvanian and Permian Basalts and Tuffs in the east. The baseline of this grid is oriented at a 90 degree azimuth. The grid lines varied in length due to the very steep and difficult terrain of "Snow Mountain". Access to the site was via placer mining roads with the

permission of the placer claim holders. The sampled area encompasses steep mountainous terrain in the north, active placer claims throughout the lower portion of the mountain slope, and streams and glacial till in the south.

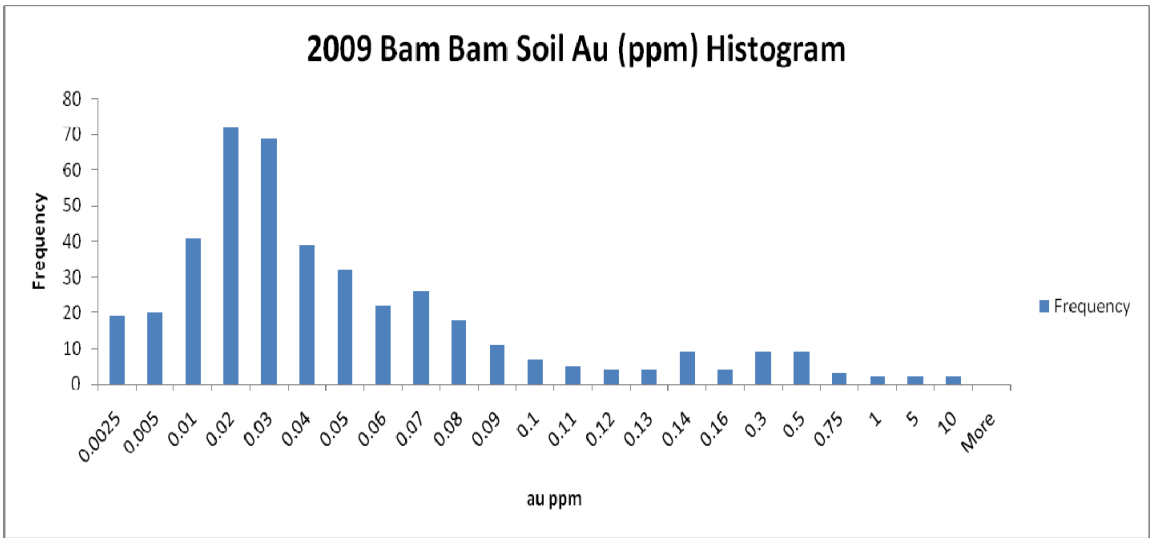

433 samples were collected between June 1st and June 9th, 2009. Many samples were not collected due to placer workings. Some samples collected may also have a strong glacial influence which was noted in the comments when samples were collected.

2.2 Results

The Bam Bam grid yielded several anomalous samples, the most significant of which occurs in the vicinity of the Rich Vein with 3 samples reporting over 0.70 ppm Au, as well as 6 samples between 0.2 and 0.70 ppm Au over a strike length of 1.20 kilometers. Most notably sample H125701 on this trend reported a grade of 5.92 ppm Au. A parallel trend can be seen approximately 250 meters SE of the Rich Vein with 2 samples over 1.40 ppm, and 2 samples 0.20 to 0.70 ppm. A strike length of 670 meters is indicated by sampling, with sample H125175 returning a value of 8.15 ppm. Historical trenching in the area is suspected to have contributed to the high values reported. The geology underlying the anomalies is of unknown age basalts and tuffs, the same lithologic units which hosts the Taurus, Sable and Plaza deposits.

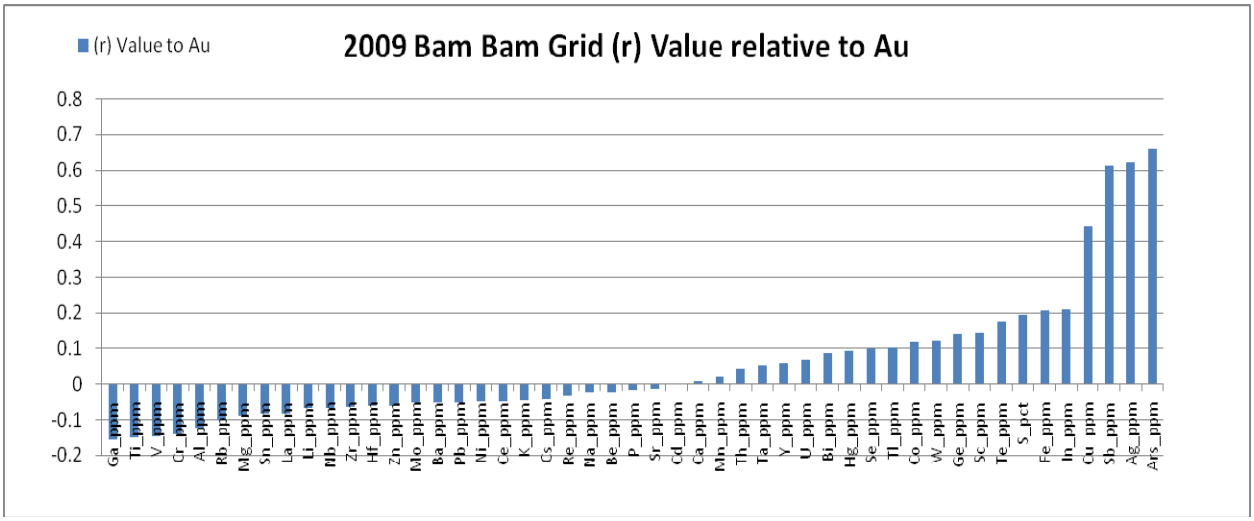

A histogram was plotted on Au values for Bam Bam demonstrates two distributions were present. This graph indicates a value of 0.08 or greater are anomalous.

Figure 3 2009 Bam Bam Soil Au (ppm) Histogram

The Pearson correlation coefficients were calculated for each element and As, Ag, Sb, and Cu all show moderate positive associate with (r) values of 0.66, 0.62, 0.61, and 0.44 respectively.

Figure 4 2009 Bam Bam Grid (r) Value relative to Au

2.3 Recommendations

The strongest anomalies, as expected, were all located on the Rich vein trend. Mapping has been completed for this area. (See Historical Below) Reopening the historical trenches in order to further understand the geology of the area is recommended, in addition to exploring the north east extension of the anomalies, and parallel trends to the south. Further filtering of the data for glacial influence should be completed as sampling in an area with placer influence may be skewing the results, although the Au anomalies are coincident with veins on surface. Sample values are most likely higher than the expected grade for the area as higher grade samples were intensely oxidized and included some glacial gravel, but the potential strike length and numerous significant anomalies on the grid make this area a priority to follow up on with trenching and possibly drilling.

2.4 Research & Historical Work

Initial mapping and sampling was completed in 1989 in the snow 89 group (Andrews, 1989). The program included mapping and the collection of 180 soil samples. The area is known for its white gold, and short strike lengths due to faulting. There is an adit into the Rich vein where gold was removed in the 1950's and milled on site. No information on ore grade from the adit is available. Attempts to find information on trenching conducted in this area have failed to produce any additional information. Overgrowth in the area indicates the trenching was conducted more than 20 years ago.

2.5 Tron Soil Grid

The Tron Grid is located in Taurus and connects the historic Elan grid with the 2007 Taurus grid. Both historical grids have demonstrated anomalous Au and Ag signatures. This grid was oriented perpendicular to the lithological contact with a baseline oriented at an azimuth of 157 degrees. Access to the site is via existing roads that required no upgrading work. The terrain of the grid is flat with minor hills and swamps, and is located in a valley which has some locations of glacial till cover.

A total of 554 samples were collected in the southern portion of the grid. Consistent sampling was difficult particularly in the south of the grid due to large ponds and swamps, as well as areas with thick glacial overburden. Sampling was completed on the southern lines of the grid between June 10th and June 13th, 2009, and in the North East corner from July 24th to July 26th, 2009.

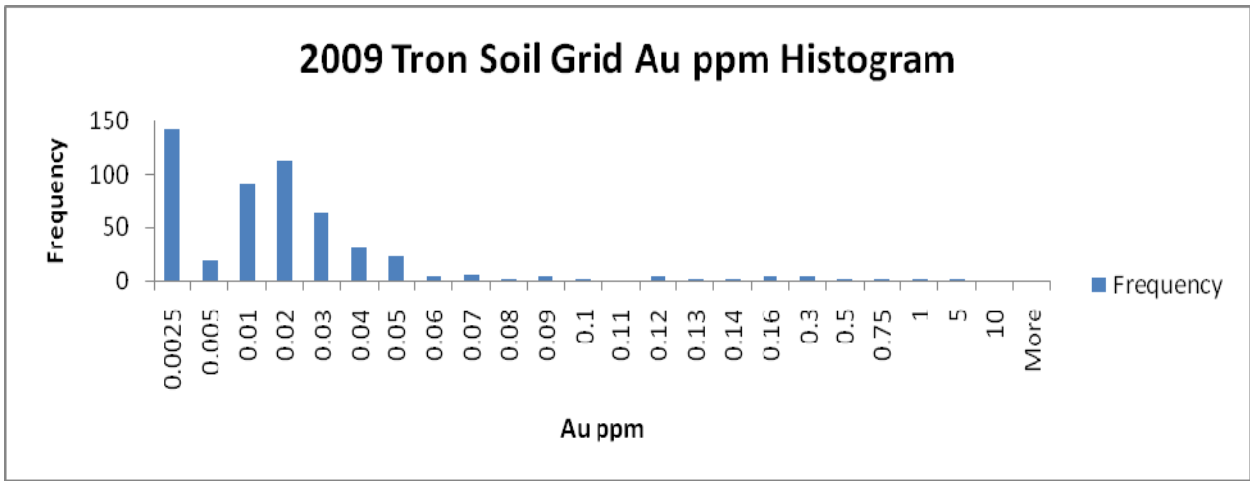

2.6 Results

The results from the southern part of the grid highlighted a few anomalous areas, the strongest of which was located in an area with known veining previously tested with drill holes 81-1-Reo, DDH81-2Reo, 81-3, and 06TII-19. The additional anomalous areas to the SW and SE of the known veining were highlighted by independent anomalous samples, and thus did not identify any trends. There were a number of anomalous samples located along the southernmost grid lines and thus additional, tighter spaced sampling in this area would be beneficial.

The northeast portion of the grid hosts the know Elan vein, which is host to a silver resource. Anomalous values in the area all follow the trend of the known vein. Anomalous results occur both along, and to the south of the Elan Vein. Anomalous gold occurrences in soil samples were all located within the portion of the grid which overlay the unknown age Basalts and Tuffs. There was no apparent correlation with data from the 2008 geophysical survey and anomalous values found on the Tron grid.

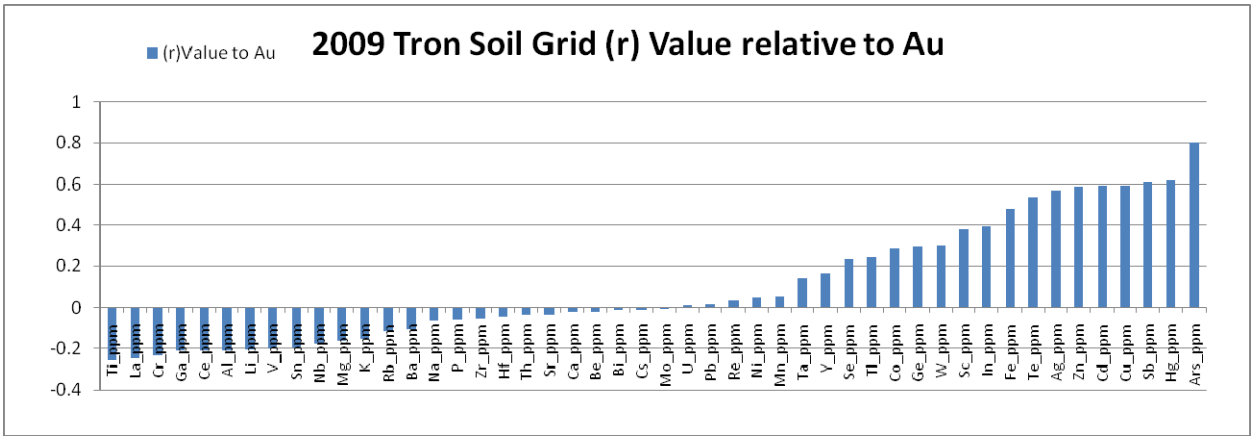

The histogram of Au values does not indicate two clear populations but extrapolation of the main distribution indicates that Au values above 0.08 ppm although weak are anomalous to background.

Figure 5 2009 Tron Soil Grid Au ppm Histogram

Pearson correlation coefficients were calculated for all 32 elements analyzed. Au values appear to positively correlate with As with an (r) value of 0.8, as well as with Hg, Sb, Cu, Cd, Zn, Ag, Te and Fe with (r) values of 0.61, 0.61, 0.59, 0.59, 0.59, 0.57, 0.54, and 0.48 respectively.

Figure 6 2009 Tron Soil Grid (r) Value relative to Au

2.7 Recommendations

Due to the poor results of the Tron grid and glacial overburden in the area no additional follow up work is currently recommended or warranted in the area.

2.8 Wings East Grid

The Wings East grid was conducted to provide additional information to support a Wing's Canyon drill program objective. The grid directly overlies a volcanic unit, the same of which hosts mineralization in the nearby Taurus and Sable deposits. The grid was extended to join to the Bam Bam grid in the hopes of identifying a mineralized trend that would correlated with the Rich Vein. The baseline was oriented at 180 degrees azimuth. The sample area was located in gently sloping forested terrain and was

accessed via the Cassiar Highway and old mine and drill roads located throughout the grid. A total of 118 samples were collected over a 3 day period between Aug 20 and 24th, 2009.

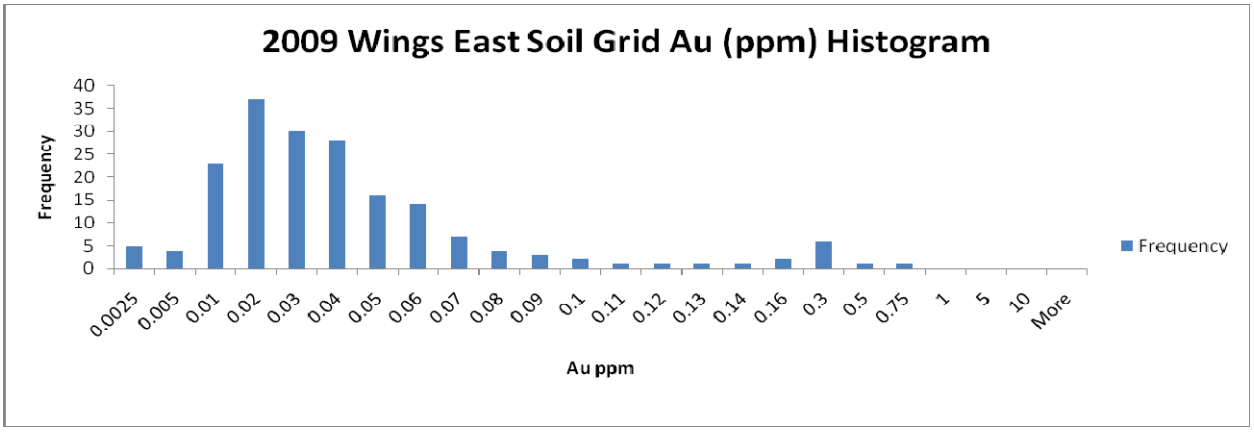

2.9 Results

The Wings East grid produced several anomalous Au values with some moderately anomalous values heavily concentrated in the north of the grid. The western edge of the grid, which abuts the canyon yielded the highest Au values. The highest value, 0.61 ppm, neighbored a cluster of Au anomalies located just east of the main canyon. Additionally, a number of anomalous samples were located along the edge of the canyon. Although the trend is not clear anomalous values appear to trend from east to west across the grid. This trend if real would potentially indicate that the Rich vein may project along strike to Wings Canyon.

The Sable and Taurus deposits appear as both magnetic and VLF highs however, the area along the edge of the canyon does not demonstrate any zones matching a similar geophysical response. The more significant geophysical anomalies on the grid are located in the eastern portion of the grid. Limited testing of these anomalies has been accomplished with drillholes T96-80, 81, 82, 83, and 84.

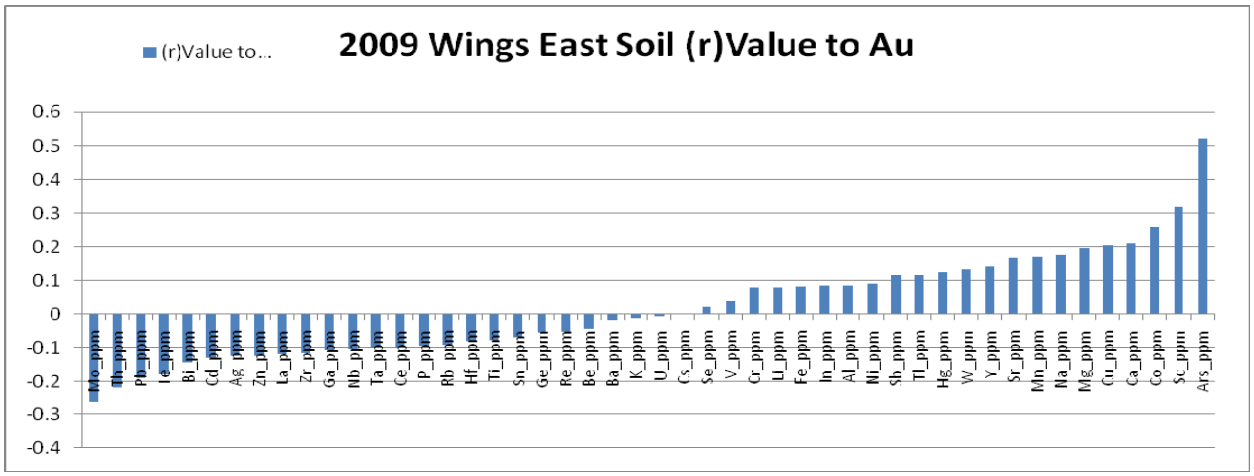

The histogram for the grid East of Wing's Canyon indicates that 0.08 ppm is a reasonable lower limit cutoff for anomalous samples.

Figure 7 2009 Wings East Soil Grid Au (ppm) Histogram

Pearson Coefficient Calculations indicated a Moderate Positive correlation with As with an (r) value of 0.52.

Figure 8 2009 Wings East Soil (r) Value relative to Au

2.10 Recommendations

Drilling was completed in 2009 within the Wings Canyon area. The East main canyon remains drill untested and thus remains prospective for future drilling. Additional sampling or trenching testing the coincident geophysical anomalies and geochemical anomalies is recommended.

3.0 Trenching Program

3.1 Scope of Work

Seven trenches were completed on the Taurus property within the Sable and 88 Hill zones. A total of 689.28 meters were mapped and 286 samples collected. These trenches exposed multiple intersections of gold anomalous samples, as well as other geologically important structures such as shear zones and permitted a more general understanding of the relationship between the shear zones and extensional veins. The 2009 trenches also served as a due diligence check on historical trenching in the area.

Table 3 2009 Trench Survey Data

Zone	Collar	Easting UTM, Nad 83	Northing UTM, Nad 83	Elevation (m)	Azimuth (degrees)	Dip (degrees)	Total Depth (m)
Sable	TR09-004	460061	6570362	1084	203	0	144.3
88 Hill	TR09-005	459757	6570471	1113	178	11	124.3
88 Hill	TR09-006	459574	6570450	1101	189	0	158.5
88 Hill	TR09-007	459657	6570468	1115	165	0	97.8
88 Hill	TR09-008	459836	6570344	1120	163	0	28.2
88 Hill	TR09-009	459834	6570331	1118	182	0	10.3

Figure 9 Plan View Trench Locations Map

3.2 TR09-004

TR09-004 was excavated in two phases the first on July 25th, the remaining portion was done on September 20th. On July 25th, both excavators, a 250 Kobelco and a Komatsu 300 excavated a total 115.64 meters. A 14 meter section that was located across an access road was left until access using the road was not needed. On September 20th the remaining 14 meters of trenching was completed finishing the trench.

The trench contained 42 individual quartz veins. All of the veins with the exception of three were mapped striking ~245-260 degrees and all were recorded as dipping greater than 78 degrees. The veins were interpreted as extensional veins emanating from a shear zone striking ~290-300 degrees. Two quartz veins contained visible gold, one of which also contained arsenopyrite. The majority of the veins were visibly barren of sulfides with the exception of minor disseminated pyrite in the vein, or minor pyrite within selvages.

A total of 39 samples were channel sampled from this trench using a diamond blade rock saw. Several of the samples were found Au anomalous, with the highest assayed value being 400.00 g/t Au over 0.40 meters which was hosted within a 0.24 meter quartz vein. This sample was included in a grade width of 8.35 meters length which reported a weighted average grade of 3.41 g/t Au using a 20.00 g/t cutoff grade (21.62g/t Au uncut). Additional notable intervals include: 2.60 meters of 5.20 g/t Au, 0.60 meters of 4.50 g/t Au, 0.50 meters of 3.13 g/t Au, 0.80 meters of 4.05 g/t Au, and 0.75 meters of 3.83 g/t Au.

3.3 Recommendations

TR09-004 intersected the main Sable Shear albeit a very narrow width of it primarily represented by mineralized extensional veins some containing visual gold and a fracture striking ~ 300 degrees. The location of the mineralization matches nicely with the projected strike of the Sable Shear that being said the Shear should be followed up on by drilling it to depth to test for the vertical continuity of mineralization. Drilling will also test other mineralized zones within the trench.

3.4 TR09-005

Excavation began July 27th with a Komatsu 300 which trenched a total of 124.28 meters to a depth ranging from of 1.50 to 4.00 meters depth.

A total of 62 quartz veins were mapped throughout this trench. The vast majority of veins were similar mineralogically to those of TR09-004. Similarities also included a dominant strike orientation range of 230 to 265 degrees and a dip range of 70 to 90 degrees. Three veins were mapped at the approximate estimated strike of the known shear veins in the area recorded 316 to 348 degrees azimuth. Some of the veins were recorded as pinch and swell veins while others terminated in the floor of the trench which is a common characteristic feature of an extensional vein, or a tension gash quartz vein.

One shear zone is noted within the trench between 22.40 to 24.10 meters. The fault zone is mapped at 230 degrees and shows an offset of 18 cm's. The fault zone consists of dark red and orange gouge with inclusive T3 wall rock clasts. Directly adjacent to the shear there is a mineralized extensional vein of approximately 8 centimeters width striking 248 degrees and dipping 82 degrees. This vein contains 2 to 15% malachite and azurite with increasing concentrations located in the cross cut of the fault. The vein also contains approximately 2% disseminated tetrahedrite.

72 samples were taken from this trench, 70 of which were chip samples, 2 of which were grab samples of quartz veins. 8 samples exceeded 2.00 g/t Au with the highest grade reporting as high as 4.27 g/t Au. The shear zone contained an interval 0.72 meter wide of 1.93 g/t Au, but more interestingly this sample reported 875.00 g/t Ag. This silver assay far exceeds all of other silver values recorded in the Sable and 88 Hill zones. TR09-005 was reclaimed late in the fall.

3.5 Recommendations

Future trenching may be warranted to follow some of the narrower zones of mineralization and to add to the delineation of the possible exposed shear zone.

3.6 TR09-006

On July 26th, this trench was excavated to a depth of 2 to 4 meters over a length of approximately 158 meters with the exception of a 12.10 meter interval located mid trench so as not to disturb marked historical drill collars. A total of 52 veins were mapped with all but 7 veins mapped as having a strike between 235 to 270 degrees, with the 7 veins striking between 20 and 70 degrees. All veins mapped were recorded as dipping in a range between 70 and 90 degrees. Measurements taken were consistent with the other vein measurements in the immediate area on the property and consistent with the extensional veining mapped. Veins were predominantly 1 to 25 cm's thick with the occasional vein recorded with widths up to 40 cm's.

A total of 86 samples were collected within the trench by hammer and chisel as chip channel samples. Grades of slightly less than half the samples taken reported gold grades exceeding 1 g/t, 10 samples exceeded 3.50 g/t Au. The most anomalous samples were reported from T3 mineralization adjacent to quartz veins, and yielded values such as 14.05 g/t, 11.75 g/t, and 9.89 g/t over widths of 0.90, 0.51, and 0.90 meters respectively.

Multiple significant grade widths have been calculated within this trench, and are shown below.

From (m)	To (m)	Width (m)	Au (g/t)
18.60	20.70	2.10	1.45
31.55	44.00	12.45	2.76
39.00	44.00	5.00	4.25
60.50	66.20	5.70	2.05
99.60	101.80	2.20	5.16
104.55	106.20	1.65	9.77
112.10	116.30	4.20	2.29

Grade Widths; intervals exceeding the cutoff grade of 3.5 g/t Au are inclusive within the table.

The trench was dug at an azimuth of approximately 180 degrees so to report widths which were approximate to true width. This trench was the western most trench completed in 2009 located in the western to central area in the 88 Hill zone, Taurus.

3.7 Recommendations

Additional trenching would be warranted to follow up on anomalous zones with focus being placed on the west which will determine if the zone is continuous along strike. This would require 2 additional trenches spaced 50m apart with an approximate length of 100 meters. Drilling following the down dip extension to the mineralized zone determined on surface is warranted.

3.8 TR09-007

The TR09-007 trench was excavated on July 25th to a depth range of 0.20 meters to 1.50 meters for a total length of 97.80 meters. The completion of this trench took 2 days to map and sample.

The geology of this trench was consistent with the geology of the property, unaltered volcanic (T1), grading into carbonate altered volcanic (T2), grading into highly pyritic carbonate altered volcanic (T3) which occasionally playing host to quartz veins. 37 veins and or veinlets ranging between 1 to 0.82 meters with an average width of 20 cm's were mapped within the trench. Similar to other trenches mapped, the majority of the veins recorded a strike orientation between 235 and 270 degrees with dips greater than 70 degrees. The majority of the veins are consistent with extensional type veins found on the property, none of the veins observed were consistent with shear vein orientations located within other trenches and the test pit. Although multiple quartz veins contained pyritic boxworking only two of the quartz veins contained pyrite in concentrations exceeding 2-3%.

A total of 35 chip samples were taken within this trench. Originally, only T3 sections and quartz veins were sampled, which were then followed up by sampling program collection shoulder samples any of locations which could potentially be a part of a more significant grade width. Of the 35 samples, 15 samples exceeded 1 g/t Au and 9 samples exceeded 3.5 g/t Au, with a peak assay of 17.9 g/t Au over 95 cm. Significant grade widths can be seen in the list shown below.

From (m)	To (m)	Width (m)	Au (g/t)
35.35	36.02	0.67	5.48
39.40	40.40	1.00	5.22
50.05	51.00	0.95	17.90
54.26	55.49	1.23	10.65
63.80	64.80	1.00	5.89
69.94	74.98	5.04	2.98
82.68	84.00	1.32	3.65
85.78	87.57	1.79	5.64

Grade Widths; intervals exceeding the cutoff grade of 3.5 g/t Au are inclusive within the table.

3.9 Recommendations

This trench intersected multiple zones of T3 mineralization, and contained the projected intersection of the high grade silver vein noted within TR09-005. Due to a second phase of drilling being conducted following up on this trench in 2009 no follow up work is required.

3.10 TR09-008 & TR09-009

These trenches were excavated to follow up on a mineralized intersection within drill hole TA09-024 which intersected a projected shear zone trend. Trenching was planned to intersect the vertical projection (up dip) of the encountered mineralization within the drillhole. The projected vertical depth of the zone was approximately 20 meters beneath the surface and graded 33.4 g/t Au over 1.24 meters. TR09-008 was trenched 28.20 meters in length and TR09-009 was excavated 10.70 meters in length.

Trenching exposed a quartz vein close to the projected surface location, striking 250 degrees with a near vertical dip. The vein was exposed within both trenches which were separated by a distance of 10 meters. In TR09-008, the quartz vein was 0.40 meters in width which narrowed to a 17 cm width in TR09-009. Separate channel samples were taken from the vein and its associated mineralized alteration halo. The TR09-008 sample graded 1.25 g/t Au along 2.70 meters, TR09-009 graded 3.33 g/t Au across a 0.70 meters width. Other than the 4 samples used to determine the grade widths shown above, two other samples were taken in TR09-008 which reported 0.25 g/t Au and 0.44 g/t Au.

3.11 Recommendations

Trench results confirmed that the mineralized zone from the drill core at 20 meters depth is continuous to surface. The results on surface did however report from the trench lower grade than the drillhole

highlighting the possible variance in mineralized continuity to depth. The results also demonstrate the useful nature trenching can be for planning future drilling or surface pit delineation.

4.0 Diamond Drilling Program

4.1 Objective

The 2009 Taurus drill program was conducted with the objective of discovering new mineralized zones and defining existing bodies of mineralization. Drilling occurred in the Taurus and Wings Canyon areas. Drilling within Taurus was initially aimed at defining an area of a proposed bulk sample pit using an average of 7 meter spacing between drillholes. The tight drilling was to provide adequate information for grade of the resource and support mine planning. Two other drilling phases were conducted to tighten the drill density in prospective areas to allow for increased resource confidence and follow newly interpreted geological targets. Wings Canyon drilling was completed to assist with the understanding of structural controls on the area as well as to determine zones of potential new veins and mineralization.

4.2 General Information

Kluane Drilling Ltd., from Whitehorse, YT, mobilized one diamond drill rig on May 31st and commenced drilling on the Taurus property June 1st. There were three phases of drilling on Taurus completing a total of 3883 meters of NTW diamond drill core. The first was completed on June 5th. This drilling consisted of 8 drill holes on the potential initial pit and bulk sampling area. Drilling recommenced on Taurus July 24th and was completed on August 14th. This second phase of drilling consisted of 26 drillholes and was completed to further define the potential Taurus pit as well as test the mineralization between known mineralized zones and further explore the 88 Hill area. The third phase of drilling commenced on October 18th and was completed on November 11th. This phase included the completion of 6 exploration drillholes in Wings Canyon and 2 in the Taurus West Fault area located in the 88 Hill zone. Throughout the program old exploration roads and trails were cleared, reopened and ditched. New roads were also created where necessary in order to permit access to planned drill sites. Drill pads were constructed with minimal site disturbance and drill supporting sumps were created to contain drill return. The drill crew was demobilized out of camp on November 13; however, the drill and equipment remained on site.

4.3 Sampling Method and Approach

During the drill program each of the 42 Taurus drill holes were sampled at generally 1.0 to 1.5 meter intervals. The entire hole was sampled in each of TA09-001 to TA09-008 to determine the constraints of mineralization. From TA09-009 to TA09-034 all vein intercepts and mineralized intervals (T3 and T4 lithologies) were sampled. For TA09-035 to TA09-042 all vein intercepts and mineralized intervals were sampled and in some cases shoulder samples were collected. Sample boundaries were determined by geologists. Logging and sampling criteria was based on lithology contacts, veining and mineralization changes. The geologists marked out sample intervals and attached sample tags to the core boxes at the

beginning of each sample interval. An overall total of 2,677 samples were collected, 2435 being the actual core samples shipped to ALS Canada Ltd, of North Vancouver, BC while a total of 242 Check assays samples were sent to Eco Tech Laboratory Ltd (Alex Stewart Group) of Kamloops, BC. Drillholes TA09-035, TA09-037 and TA09-038 did not follow the above procedure but rather their 376 original core samples were completed in house with 62 samples sent to ALS Canada Ltd for check assay analysis. A further 13 selected pulp samples were obtained from the 376 in house samples and sent to Eco Tech for a second check assay analysis. Most core samples were submitted for fire assay and multi-element ICP at ALS Canada Ltd. in North Vancouver, BC. The core samples which were assayed in house were assayed exclusively for gold via gravimetrically finished fire assay.

4.4 Core Sampling Procedures and Protocols

Core samples collected throughout the drill program were carefully collected and digitally recorded. Core samples were cut in half by core cutting saws with one half remaining in the core box and on site and the other half placed in sample bags along with their corresponding sample tag. The sample bags were shipped to ALS Canada labs in North Vancouver, BC or to the onsite assay lab depending on the drill hole.

Samples hosting visible gold (VG) underwent a four fire assay analysis and the resulting four numbers were averaged to give the grade of the sample. VG was observed in drillholes TA09-001, TA09-003, TA09-005, TA09-025 and TA09-041.

The detailed core sampling procedures and protocols followed by Hawthorne Gold Corporation were as follows:

1. Drilling blocks were reviewed at the end of each drill shift to ensure depths were correct and in appropriate locations. Both Imperial and Metric hole depths were recorded on the blocks by Kluane Drilling.
2. The drill hole number, box number and starting and ending interval for the box was written in black felt marker on the top left-hand corner and bottom right corner of each box in large, clear letters for photographing.
3. The core was geoteched recording core recoveries, rock-quotient-density measurements (RQD), fracture sets, and all other relevant geotechnical data.
4. Core was then logged core by lithology, alteration, mineralization, veining, and structure.
5. Sample intervals were marked using china markers and sample tags. Core samples were taken generally every 1 to 1.5 m in length, although some were a minimum of 0.10 meters. Sample lengths were somewhat dependant on lithological breaks and geological discretion.
6. Core cut lines were marked using a china marker and submitted to the photograph room for photographing.
7. Core was photographed with all tags, markers, etc. in place before splitting.
8. Core was split using a diamond bladed core saw in determined sample intervals.
9. Sample numbers were written on sample bag, all samples were double bagged with the sample tag placed between the two bags.

10. Labeling of the end of each box was done with drill hole number, box number and the contained core interval using a 1”x 4” buttersoft tag or Dymo aluminum tape writer.
11. Each ‘rice sack’ was consecutively numbered and sealed with a randomly numbered security tag.
12. The first ‘rice sack’ in the shipment is to contain the Sample Submission Form copy #1. One hole per sample submittal sheet was used to in order to retain more control of shipping, lab reporting and assay results. If the hole exceeded 250 meters the hole required two sample submittal forms. The ‘rice sacks’ are to be transported from camp to ALS Chemex via Banstra Trucking.

Note: For drill holes TA09-035, TA09-037 and TA09-038 the above procedure from 11 to 14 was not followed. These samples were instead packaged and sent to the in house assay lab.

4.5 Core Sample Analysis – ALS Chemex

1. Individual core samples submitted for analysis to the ALS Canada Lab weighed between one to five kilograms based on core sample lengths that were generally between 1 to 1.5 meters in length, and cut in half.

2. The entire sample was fine crushed to ≥70% passing 2mm (-10 mesh)

3. The sample was riffle split and crushed to 250 grams

4. The 250 gram sample was pulverized to ≥85% passing 75 microns (-200 mesh)

5. A 30 gram representative pulp was collected leaving behind a 220 gram pulp/reject to be stored.

6. The pulp sample was analyzed for gold using (Au-GRA21) and ICP (ME-ICP41) which tested 35 elements.

4.6 Core Sample Analysis – Hawthorne on Site Assay Lab

1. Individual core samples submitted for analysis to the Hawthorne in house assay lab weighed between one to five kilograms based on core sample lengths that were generally between 1 and 1.5 meters in length, which were then cut in half.

2. Samples are then dried and crushed to -1/4” using a Rino jaw crusher

3. The entire sample was riffle split and recombined at least three times to 250 grams.

4. The 250 gram sample was then pulverised to a very fine powder and sent for assay

5. The crusher and sample riffle were cleaned with compressed air between each sample and the pulveriser was cleaned with silica sand and compressed air between each sample.

4.7 Preparation Duplicate (PD) and Check Assay (CA) Samples

The Preparation Duplicate and Check Assays were completed every 10 samples. For TA09-001 to TA09-008 the Preparation Duplicate and Check Assays were inserted every 10th sample starting at 10 and 11. For example 1000010, 1000011, 1000020, 1000021. Sample site number 9 contained the original core material and sample site 10 and 11 were empty bags with the appropriate sample tag within it. For TA09-009 to TA09-042 the Preparation Duplicate and Check Assays were inserted every 10th sample starting at site number 9. This site contained the original core material and then the lab created an A and B sample for the Preparation Duplicate and Check Assay. There were no empty bags with a sample tag designating these sample sites shipped from site. The sample numbers would read 100009 as the original sample, 100009A as the Preparation Duplicate, and 100009B as the Check Assay.

The QA/QC Check Assay portion was completed for every 10 samples. ALS Chemex split the sample and a 250 gram crushed sample was sent to EcoTech Labs for analysis.

1. ALS Chemex crush core and split sample into 3, 250 gram samples and remaining reject was stored at ALS Chemex to be later shipped to camp location for more permanent storage.

2. Two of the three samples followed the above procedure at ALS with the third crushed sample being sent to Eco Tech for gold analysis.

3. The first two samples analyzed as above were reported in the database as the original (9) and the Preparation Duplicate (9A).

4. The third received from Eco Tech for similar analysis, defined as the Check Assay reported to the database as sample (9B).

For in house lab samples procedures were followed that were similar to above.

1. The in house lab crushed core and split the sample into 3, 250 gram samples with the remaining reject to be stored on site.

2. Two of the three samples followed the above in house procedure and the third was sent to ALS for check assay gold analysis.

3. The first two samples analyzed as above were reported in the database as the original (9) and the Preparation Duplicate (9A).

4. The third received from ALS for similar analysis, defined as the Check Assay reported to the database as sample (9B).

4.8 Sample Preparation using 4FA

1. 4FA analysis was conducted on a 250 gram split of crushed sample using a riffle splitter.

2. The 250 gram sample was pulverized to >85% passing 75 microns (-200 mesh).

3. Four 30 gram representative pulps split from 250 gram pulp.

4. The four representative pulps were then individually fire assayed using (Au-GRA21) and ICP (ME-ICP41) the gold results were averaged to determine the gold assay for the sample and stored in the database as an averaged value.

4.9 Quality Assurance/ Quality Control

Standards and Blanks

Standards were inserted every 25th sample starting at 25. For example 1000025, 1000050, 1000075, 1000100.

Blanks were inserted every 25th sample starting at 1. For example 1000001, 1000026, 1000051, 1000076.

Standards remaining from the 2008 drill program at Frasergold and Table Mountain were used in 2009. The exception to this was a Very High standard which was introduced for the 2009 drill program to address higher grade assays anticipated for the Table Mountain property. The sample standards consisted of the following grades.

CDN-CGS-11 (Low) 0.73± 0.068g/t Au

CDN-GS-2C (Medium) 2.06± 0.15g/t Au

CDN-GS-3D (High) 3.41± 0.25g/t Au

CDN-GS-10C (Very High) 9.71± 0.65g/t Au

CDN-BL-4 (Blank) <0.01g/t Au

The value of the Standard was written on the sample tag by the geologist and then the correct bag of standard material was inserted into a sample bag by the core cutter. No value of the Standard was indicated to the labs in the process.

4.10 DIAMOND DRILLING PROGRAM – INTERPRETATION OF RESULTS, CONCLUSIONS AND RECOMENDATIONS

4.11 Results

The Taurus drill program demonstrated that mineralization extends between previously known mineralized zones. The close spaced drilling of the bulk pit area demonstrated that the shear veins and mineralized zones can be tracked to depth. It also showed that there is potential for new low grade zones in Wings Canyon and mineralization continues long strike of Taurus West Fault.

4.12 Conclusion and Recommendations

Due to the success of drilling the main area of Taurus continued infill drilling at 25m spacing and definition drilling at 12 to 15 meter spacing is recommended. Drilling should continue to focus around the perimeter of the main zone and all delineated shear zones found through the 2009 trenching and field work. Additionally, follow up on the Taurus soil grids from the 2009 season (Bam Bam and Tron) are recommended. Further follow up on Wings Canyon would be prudent given the results of the first phase of drilling within this area and should include trenching to the west of the main canyon.

A thirty-four (34) drill hole program was designed to add resources and geological confidence to the Sable (24) and 88 Hill (10) zones and to explore the continuity of the shear veins to the northwest and southeast. Six (6) holes were completed to explore the Wings Canyon area while two (2) others were done west of 88 Hill to test the continuity of the mineralization in the Taurus west shear zone.

5.0 Taurus, Sable Shear Bulk Test Pit

5.1 Objective

The purpose of this 10 000 tonne bulk test pit was to determine if the high grade shear zones and veins common to the Taurus property could be made economic through a mixture of open pit and high grade mining methods as well as to conduct metallurgical test work on the potential ore. An additional goal of this study was to determine the economic potential of blending Taurus or with high grade ore from the Table Mountain current resource from the Bain vein in an effort to prolong current mine life estimates.

5.2 Scope of work for 10,000 Tonne Bulk Test Pit

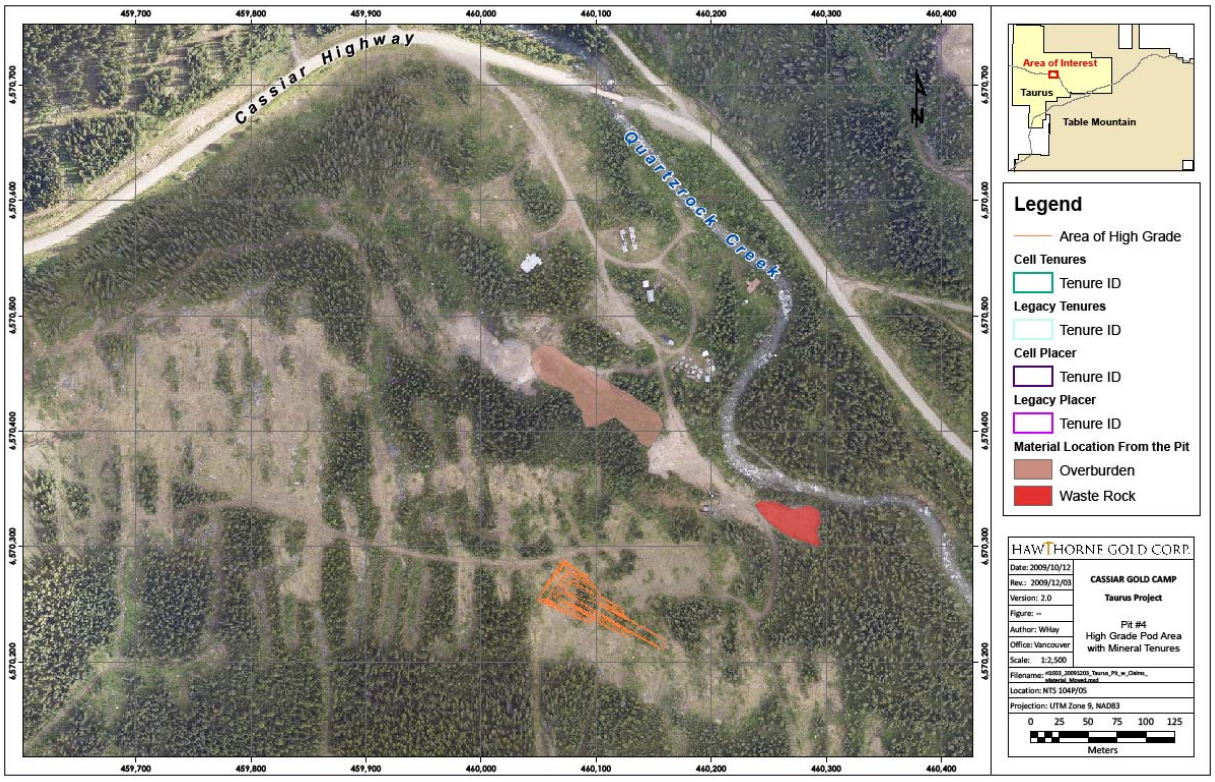

A 10,000 tonne bulk test pit was permitted for the Sable zone which was delineated by historic drilling and the first phase of the 2009 drill holes. A total of 498 truckloads of ore averaging 11 tonnes per truck were blasted and removed from the bulk sample site and brought to the mill, for a total of 5,478 tonnes. 4522 tonnes of test material remain to be mined and sampled in the future. An average head grade of 3.2 g/t Au ore was reported from the in-house lab.

5.3 Overburden, Stripping and Removal

Stripping of overburden took place over the course of 28 days, and was conducted by Klappan River Services, Iyon Ketchika Contracting, Iskut First Nations, Dease River Development Corp, and Taiga Ventures. The area was stripped was larger than the originally proposed pit (shown in Figure 1), and provided the opportunity to understand the surface of the ore body to a greater extent and allowed

some flexibility in the mine plan. An added value to extra stripped area was that a more thorough sampling program could take place to prepare for follow up work or pit expansion if required. The equipment used to strip the proposed area included a D8 Caterpillar, two excavators and three 12 tonne dump trucks. The D8 was used to strip the overburden to a level where one of the excavators could follow up and scrape the remaining overburden from the rough surface of the bedrock. One of the excavators was then used to load the 12 tonne ore trucks, which transported the overburden approximately 300 meters away from the test pit site to a single overburden waste pile. The location used to store the overburden was specifically permitted and stored separate from the hardrock waste. The placer claims overburden was removed from were listed as 617143 and 575519. A total of 3250 loads of overburden were hauled, totaling of 35,750 tonnes calculated using an average of 11 tons per load. Figure 10 shows where the overburden was placed on the Taurus property.

Figure 10 *A map of the Taurus property with two polygons depicting the stripped overburden pile as well as the waste rock pile in reference to the pit outline.*

5.4 Recommendation

It is recommended that the pit access road be properly engineered and constructed with rip rap and gravel to withstand the weight of the future mining equipment. If this pit is deemed economic and is taken to the next stage of a small mining permit of 75,000 tonnes per year, then an alternate route of a shallower grade would need to be constructed so to support the haul trucks in all weather conditions.

5.5 Geological Mapping

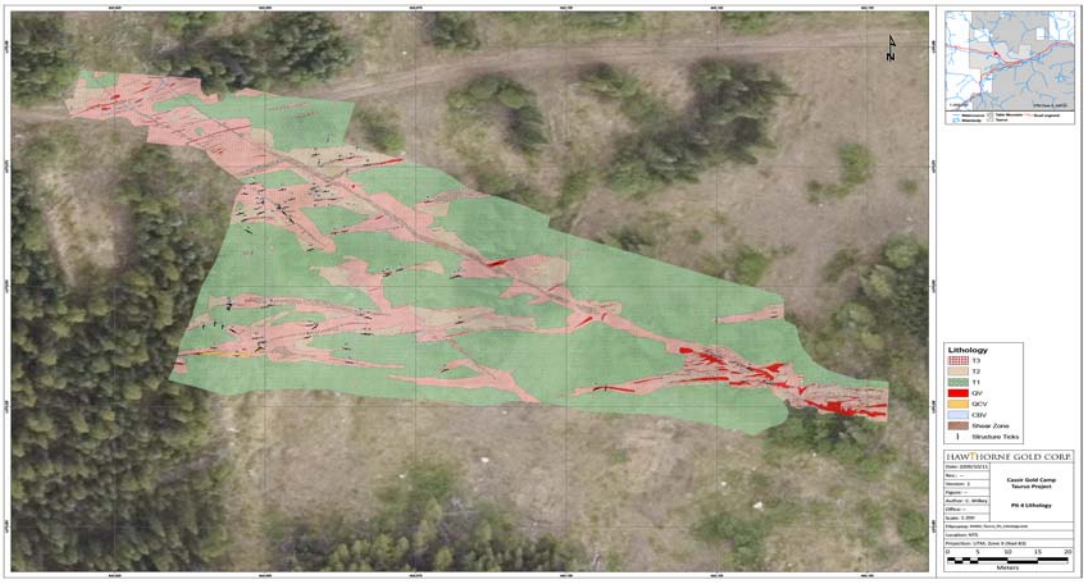

After the equipment cleared off as much overburden as possible, the remaining overburden was pressure washed for mapping purposes. Water was pumped from Quartz Creek to a large sump topographically higher than the pit, using a rented lift bean pump. The water was then pumped from the sump into the pit using a Wajax to wash off the remnant soil and rocks (overburden) so that the bedrock could be mapped. As the pit was being washed, it was mapped and channel sampled. Originally, the pit was surveyed using a compass and soft chain (measuring tape) and sectioned off into 5x5 meter grids. Mylar sheets were made into 5x5 meter grids using a 1:5,000 scale and labeled using a northing and easting grid based on a pit 0N, 0E which was located in the north-western most corner of the pit. It should be noted that the North label was not recorded as true north true north but rather offset by 22 degrees. The final map produced was rotated by the 22 degrees described so as to represent the geology on the map in a true north reference.

The geology exposed in the pit is as described in the majority of the Taurus area, in that it is all of similar rock type but varied in the variety and intensity of alteration and quartz veining and hosts a rather long shear zone. The main bedrock lithologic unit of the Taurus property is entirely of mafic basalt. This basalt is partitioned into T1, T2 based on the alteration of the unit. The T3 unit is essentially a T2 unit with ~ 3-5 % pyrite mineralization. The most commonly observed alteration is a chlorite/epidote altered green volcanic unit (T1) which historically has been proven to be devoid of Au mineralization. The T2 alteration is a carbonate alteration that is generally intense and sometimes contains disseminated fine grained pyrite <5%. This unit is of a light grey color which on surface weathers a rusty red color due to the pyrite content. The T2 generally runs between 0.1-0.5 g/t Au and marks the shoulder of mineralization proximal to the T3 units. The T3 unit is carbonate altered and carries 5-40% pyrite mineralization which is generally coarse grained euhedral pyritohedron crystals ranging from 2-20 mm sized. Gold hosted within the basalt is present as both refractory and free gold. The lithologic units appear to be controlled by their proximity to both the shear and extensional quartz veins, in that the T3 is directly adjacent to the quartz veins, and grades outwards towards the 'unaltered' green T1 unit. The extensional and shear veins can carry sulphides which include: pyrite, tetrahedrite, and chalcopyrite, and less commonly malachite, azurite, bornite and occasional free gold. Although the alteration of the volcanics grades outward from the quartz and quartz carbonate veins, the contact between T3→T2 and T2→T1) is generally sharp and easily visually discernable.

5x5 meter grids were mapped making sure that the contacts and veins that intersected the grid lines were carried over to the adjacent grids. The maps were constructed based on the units T1, T2, and T3, and noted quartz veins >10cm in thickness. Shear veins (and zones) were noted separately, as were quartz and carbonate veins. Veins and structures were measured with only the dips were recorded on a spreadsheet. Strikes were only accurately represented on the plan map (This was to ensure no conflicting data). Due to the original time schedule allotted to the pit mapping proved insufficient thus the mapping process was streamlined to focus mapping in detail the mineable zones of 1.50 meters width or greater.

After the drilling and blasting of the originally mapped area had commenced, the NW and SE corners of the exposed pit were expanded, stripped, washed, mapped and sampled. These areas were not under time constraints so were completed in greater detail. The completed geological map can be seen in Figure 6. The bulk sample is primarily of shear material extracted from the main Sable Shear which is the most prominent feature striking at ~298 degrees and has been exposed for over 120 meters of length. A small portion of material was obtained from a less prominent adjacent shear zone trending 260 degrees as well as minor sections of extensional veining immediately adjacent to the Sable Shear. The Sable Shear zone varies between 10's of centimeters in the northwestern limit of its exposure and dilates to several meters width in the southeastern limit of its exposure. The Sable Shear dilates and contracts along its strike. The dilational zones mark locations of significant crustal displacement and typically spawn extensional veins. There appears to be a rhythm to the dilational zones however additional exposure would be required to confirm this observation. The grades throughout the Sable Shear zone are consistent, and generally exceed 4-5 g/t Au. This zone also contains an abundance of extensional veins and minor shear zones that both contain free gold, and are anomalous when not bearing gold, and these structures are at orientations of ~265 and 085 degrees. The second minor shear zone intersects with the main shear zone and stops at that intersection. Extending away from the main shear zone, the veining is more carbonate rich than any of the other veining, and there are few to no extensional quartz veins associated with this shear zone. The grades in this zone are lower on average than the main zone, although are still anomalous and generally graded over 2.0 g/t Au. This shear zone likely was a prominent extensional vein that ended up having shearing occurring along the same plane of weakness. Structurally, all of these veins are very steeply dipping, dipping between 75-90 degrees both to the north and to the south randomly.

Figure 11 *Geologic map of the Taurus Pit with structure, after stripping, pre blasting.*

When a map sheet was completed, it was subsequently scanned and digitized using ArcMap. All the individual map sheets were then finally stitched together to complete one large compilation map shown in Figure 6.

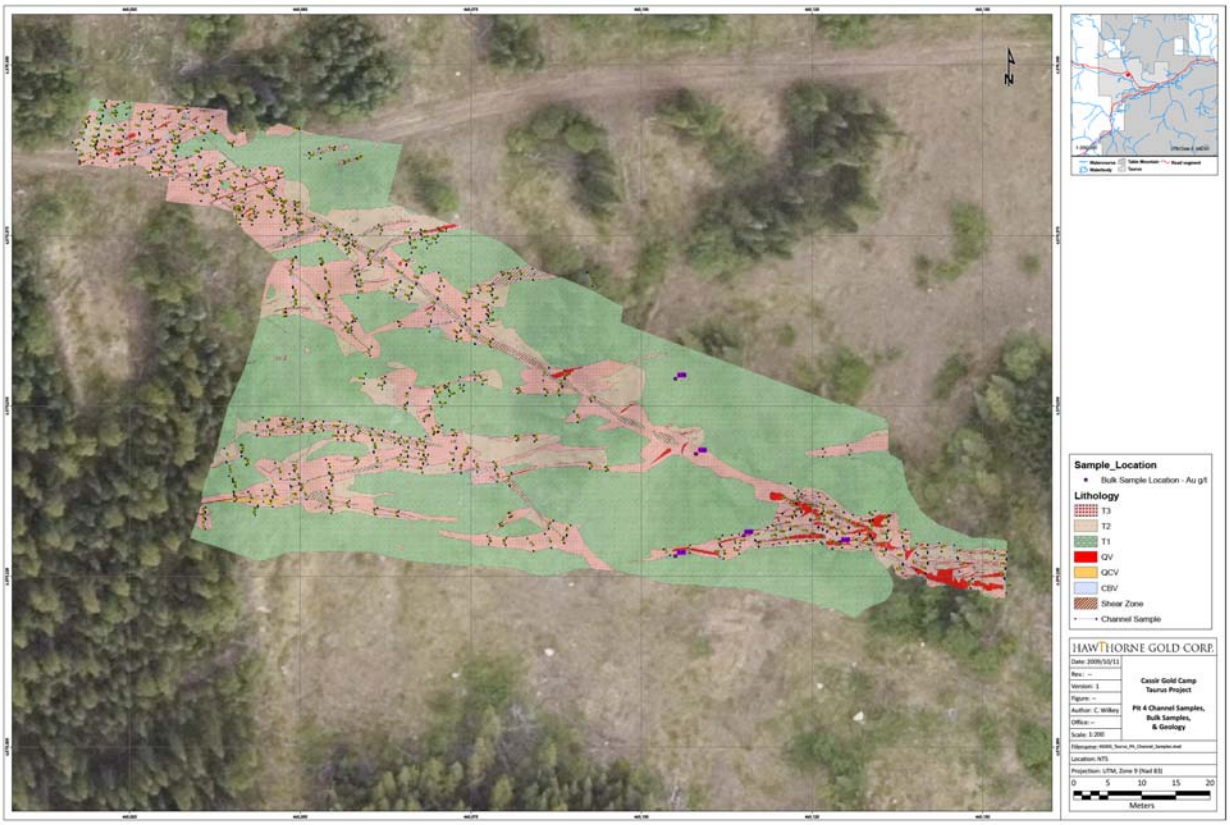

5.6 Recommendation

Additional stripping along the strike of the Sable Shear zone extending the current map to the southeast is warranted. Additional stripping will support future ore delineation and support definition drilling planning as well as add to the geological understanding of the Bulk Sample Pit area.

5.7 Channel Sampling

Initially samples were taken across all units, contacts, and veins. Samples were taken perpendicular to the strikes of these units and veins. Protocol was later changed to sample only mineralized zones of T3 or veins. Samples were taken roughly every 2 - 5 meters along strike of the mineralized zones, and 2-3 meters along strike of the Sable Shear zone. Sample density and locations of surface channel samples are shown in Figure 7. Samples were surveyed in with soft chain from the borders of the grids, and channeled using a diamond toothed rock saw. These samples were bagged and tagged and sent to Chemex.

Figure 12 *Location map of surface channel samples overlain on geology within the Taurus Pit.*

There were a total of 137 channel samples taken within the original pit outline, and an additional 290 channel samples taken from the NW and SE extensions as well as higher density within the pit. Also, 5 bulk samples were taken within the shear zone. Figure 3 shows the channel and bulk sample locations, with all assay results reported. The results of all of the channel samples can be seen in Appendix J.

5.8 Channel Sampling Analysis

Recommendations: It was determined that a 5 meter spacing between channel samples along strike was too large. It is recommended that future sampling should be conducted at a 2-3 meter spacing to determine a more accurate estimate of ore grade.

5.9 Percussion Drilling, Blasting, and Sampling

Drilling and Blasting was conducted by McCaws Drilling and Blasting Ltd of Terrace utilizing a G-D Hydra-Trac 300 percussion drill. There were a total of 15 blasts, but for mapping purposes, 0-16 blasted areas are outlined as shown in Figure 4. Two blast areas labeled Blast 0 and 11 on Figure 8 were not actually blasted, but excavated freely due to the high level of surface oxidization. Blast 2 and Blast 4 were intended as waste blasts; however they exposed sections of ore material that was subsequently shipped to the mill. Prior to blasting the ore-waste contacts were spray painted onto outcrop a blast hole grid was laid out with typically a 6 foot spacing between drill holes and 3 feet away from any contacts to control back breakage.

Figure 13 *Map of the Taurus pit, depicting the 16 'blast' areas.*

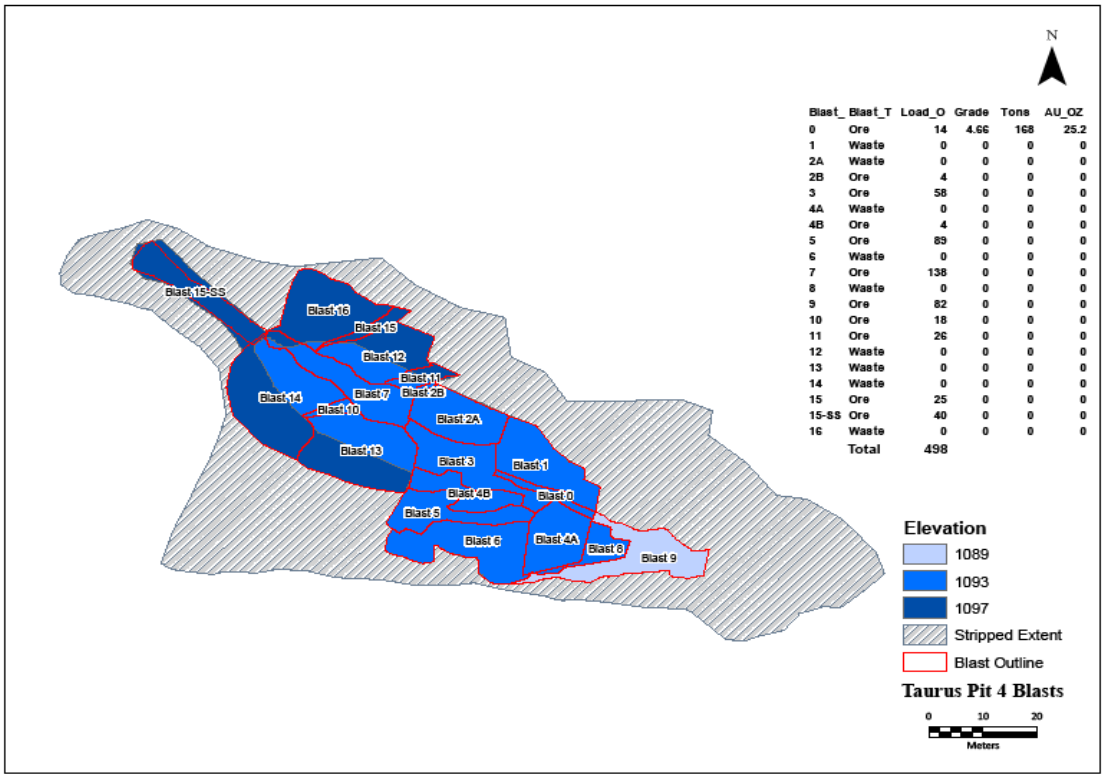

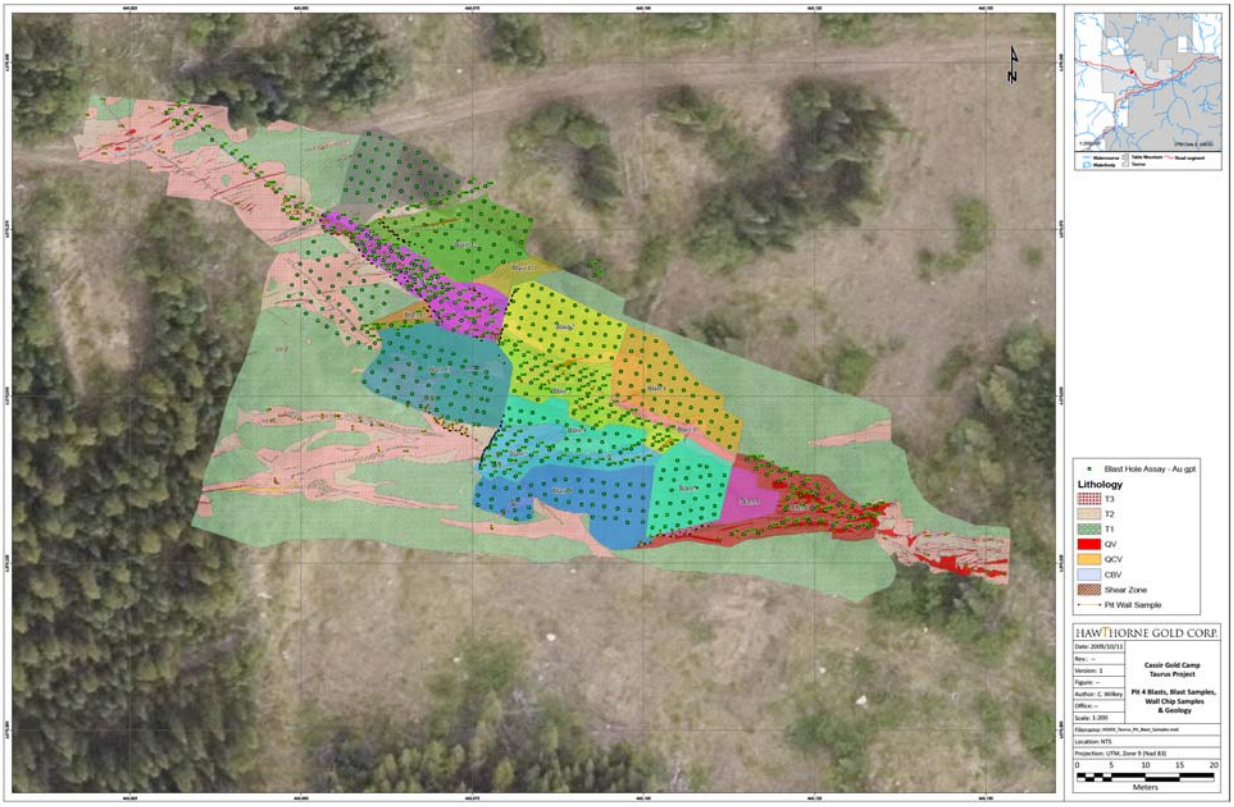

Figure 14 *Map of the Taurus pit, depicting the blast areas, with the drillhole sample locations.*

The Bulk Test pit is located of an area which has 12 meter topographic change decreasing from West to East along strike. Three benches of 4 meters depth and 4 meters width were designed and partially completed. The entire Bulk Test pit was not mined due to weather conditions.

RC drill percussion chips from drillholes located within ore were collected by a geologist or a trained assistant and assayed by Hawthorne Gold's in-house lab to assist in determining average grade of the individual blast areas. When individual drill holes were drilled in excess of 4 meters deep two samples were taken. The first sample was taken from 0 – 4 meters the second taken from 4 meters to end of hole. The assay results of the RC drill percussion chip samples can be found within Appendix K, and a compilation of the grades within each of the sampled blasts can be found in Table 10 below.

Table 10 *Average grades of Blast Areas based on RC Percussion chip samples*

Blast Number	Average Grade (g/t Au)	Comments
3	4.01	58 loads from this blast area went to the mill
4	3.02	One drill hole in waste blast (4 loads)
5	1.29	89 loads from this blast area went to the mill
7	2.83	138 loads from this blast area went to the mill
9	3.42	82 loads from this blast area went to the mill
10	4.78	18 loads from this blast area went to the mill
14	0.25	0 loads from this blast area went to the mill
15	0.86	65 loads from this blast area went to the mill
Total Weighted Average:		**3.04 g/t Au**

5.10 Recommendations

The sample collection method proved in adequate for representing the grade of the ore drilled. It is recommended that a better collection procedure be produced to allow for a more accurate representation of the ore zones drilled.

5.11 Pit Wall Mapping and Sampling

Blasts that exposed mineralized zones along pit walls were mapped and sampled to support future mining and modeling. Chip samples were taken across the exposed width of the mineralized zones. A total of 143 samples were taken, assay results can be found in Appendix L.

5.12 Muck Sampling

Following each blast, the waste or ore mucks would be loaded into the hauling trucks and shipped to a storage location directly behind the mill. Three 12 tonne dump trucks were employed for this portion of the project. Following each ore blast, the loads of ore were taken to the mill located on the Table Mountain Property. Each load was dumped independent of another, with one random muck sample taken from each truck load. The process was to take 10 small random handfuls of material from various locations from each load, put them into a poly ore sample bag and deliver the sample bag to the 'in house' assay lab for analysis. Each truck load was allocated to its respective ore blast location allowing for a calculation of average grade per ore blast area. The assay values reported from the in-house lab can be seen in Appendix M. Table 11 below gives the average grade allocated to each blast.

Table 11 *Average grades of Blast Areas based on Ore Truck Muck samples*

Blast #	Average Grade of Muck Samples (g/t Au)	Average Grade of Drill Chips (g/t Au)	Comments
0	8.9	N/A	Not Blasted, free dug with excavator
2	4.05	N/A	
3	3.87	4.01	
4	3.02	3.02	Only one drill hole in this blast area was sampled
5	2.88	1.29	
7	3.37	2.83	
9	3.89	3.42	
10	3.06	4.78	
11	2.08	N/A	Not Blasted, free dug with excavator
15	1.26	0.86	
Total Weighted Average of Muck Samples:			**3.2 g/t Au**

Waste was removed approximately 200 meters from the pit and stored on top of the historical waste pile from the Sable workings. A total of 1103 truckloads of waste were removed from the pit for a combined weight total of 12 136 tons. The 2009 Bulk Sample pit production yielded a 2.2:1 waste rock to ore ratio. 5478 tonnes of ore was removed from the Taurus Sable Shear zone Bulk Test pit with an overall grade based on 498 muck samples of 3.2 g/t Au.

New waste pile location(s) will be required to complete the remaining bulk sampling work.

6.0 Surveying

Underhill Geomatics Ltd. surveyed area constraints of the pit prior to stripping. All other survey work was conducted by a Hawthorne employed surveyor which surveyed; drill hole locations, blasting areas, mapping locations, pit surface points and channel sample locations.

7.0 Metallurgical Test Work

Metallurgical testing from material obtained from the drillholes within or proximal to Sable zone bulk test pit area was initiated to determine the solution to certain impediments to making a profitable flotation concentrate. The metallurgical work was partially completed within the 2009 season and is expected to be completed in 2010.

In addition to metallurgical testing a collection of environmental data and testing of sample for ARD and ML characteristics was also carried out to be used for application for a small mines permit.

The SGS results from the 2009 metallurgical test work are included in this report within Appendix H.

8.0 Environmental Work

The purpose of this work was to conduct a study on the Acid Rock Drainage/Metal Leaching for the bulk sample Notice of Work and support De-watering of the Sable portal for exploration access through monitoring and initial environmental baseline data collection program. Due to water quality and quantity data typically requiring a minimum of one year of data to support permitting both programs were initiated in early 2009 to ensure a timely completion of the study.

8.1 Acid Rock Drainage and Environmental Baseline Work Objectives

The first objective was to complete an initial Acid Rock Drainage and Metal Leaching (ARD/ML) that would satisfy the Ministry of Energy, Mines and Petroleum Resources (MEMPR) requirement for the approval of an Exploration Notice of Work for a 10,000 bulk sample. Lorax Environmental of Vancouver, BC was contracted for this work and supported by ALS Laboratories of Burnaby, BC and SGS Laboratories of Richmond, BC for the analysis conducted. Attached is the final report produced by Lorax Environmental.

The second goal was to gather water quality information obtained water within in the Sable portal prior to de-watering and during de-watering to confirm that the water is suitable for direct discharge to the environment. The Sable portal was de-watered to allow underground access for geological exploration mapping. Attached are the water quality analytical results.

The final objective of the program was to commence the gathering of environmental data that requires the longest time period to satisfy scientific scrutiny during the application phase and to monitor the site during the exploration activities. This program was initiated in the spring of 2009 and was ongoing throughout 2009. Expenditures for this assessment report are only those expenditures that occurred during 2009 and are documented in the table below.

Table 12 Summary of Environmental Expenses

SUMMARY OF ENVIRONMENTAL EXPENSES		
Contractor	**Description**	**Amount**
Lorax Environmental	Bulk Sample geochemical	$ 21,472.51
	Exploration Area geochemical	$ 63,242.17
SGS Canada Inc	Laboratory - Geochemical and Metallurgical	$ 32,341.42
ALS Laboratory Group	Laboratory Water Analysis	$ 8,232.64
	Laboratory Water Analysis	$ 6,640.21
Dillon Consulting Ltd.	Water Monitoring	$ 12,122.28
	Environmental Baseline Data collection	$ 76,654.86
	Soil Baseline monitoring	$ 5,566.02
	Aquatic Baseline monitoring	$ 16,033.55
	TOTAL	$ 242,305.66

8.2 Water Quality and Quantity

Dillon Consulting of Vancouver were awarded the water monitoring study. Monitoring work was initiated in the spring and continued with regular sampling throughout 2009. Stream flow meters were installed with data loggers to continuously record the flows at four locations. A total of six water sampling stations were established to collect the water samples. These sites include both upstream, downstream and sites on the mineral claims. A map showing the sample locations is provided. Another six sample sites were established to gather baseline data to cover potential future tailings pond impact on the receiving environment.

Only raw data was collected this year, no interpretation or report has been completed within the time accounted for within this report.

8.3 Aquatic Resources Effects Assessment

Dillon Consulting were awarded Aquatic Resources Effects Baseline study on the upstream Troutline and Quartzrock creeks extending through to the confluence with the McDame Creek.

Only raw data was collected this year, no interpretation or report has been completed within the time accounted for within this report.

8.4 Hydrology

The local study area (LSA) and the regional study area (RSA) were planned to comprise the various local water sheds and the regional 200 km radius area respectively. A number of hydrometric monitoring stations were established to complement the stations already installed and monitored to support the Columbia Yukon project.

Only raw data was collected this year, no interpretation or report has been completed within the time accounted for within this report.

8.5 Acid Rock Drainage and Metal Leaching (ARD/ML)

The Lorax report completed for the bulking sampling application was used as the basis for the more in depth study required for the potential future small mine application. A large geochemical program was initiated including the construction of field waste rock/ore test bins.

Only raw data was collected this year, no interpretation or report has been completed within the time accounted for within this report.

9.0 Other Work

Field crews partook in several days of core salvaging and reclogging of the core library, both at Table Mountain and at Taurus. Compilation work was completed on site for data pertaining to the property geology due to the fact that all datasets were originally stored at the mine office. Mine portal rehabilitation for access to faces for mapping was carried out extensively during the months of July and

August, but these assessment dollars are incorporated into a later assessment report and so will not be reported herein.

10.0 Conclusion and Recommendations

The 2009 exploration program was successful in providing Hawthorne the data required to support a detailed geological model for the mineralization at found at the Sable zone, 88 Hill zone as well as other adjacent zones at Taurus. Due The shear zones and extensional veining being the main target for the property a two step relatively tight drill spacing is warranted. The first phase of drilling would be targeting the shear zones to establish trends and determine mineralization at depth. This drilling would require drill spacing along strike of 25 meters and approximately 30 – 50 meters density down dip. A second phase definition drilling program would require a density of ~ 12.5 meters along strike and 15 meters down dip.

It is recommended that an initial 3500 meters of drilling be conducted with the Sable, 88 Hill, Highway, and Taurus West zones. An estimated total cost of $550,000.00 would be required for drilling. An additional $50,000.00 dollars is recommended to conduct additional follow up trenching and soil sampling on the property.

11.0 Statement of Expenditures

I, Kristian L. Whitehead, an employee of Hawthorne Gold Corporation, Suite 1580 – 505 Burrard Street, Box 72, Vancouver, BC, Canada, V7X 1M5, do solemnly declare that field reconnaissance, soil sampling, rock and chip sampling, surveying, trenching, bulk sampling, diamond drilling, and logistical support costs for undertakings carried out on the aforementioned claims (see Table 1) between the dates of May 1 & December 31, 2009 were as follows:

Type of Work	**Diamond Drilling Program - Kluane Drilling Contract**	
Dates	June 5th - July 23rd & August 15th - October 17th	
Calendar Days Worked		54
Man days		270
Meters Drilled		3883
Average cost per meter		$90.00
Subtotal		$349,470.00
Drilling Supplies		$38,918.54
Core Boxes		$10,419.30
Heavy Equipment		$23,310.00
Food & Accommodation (per day)		$50.00
Food & Accommodation Total		$13,500.00
Drilling Direct Costs Total		$435,617.84

Type of Work	**Core Logging & Processing Program**
Dates	May 25th - June 4th, July 24 - August 14, October 18 - November 17th 54 days drilling, 64 days prep, sampling, logging
Personnel Names	Kristian Whitehead, Senior Project Geologist

	Mallory Dalsin, Geologist	
	Stephanie Nicholls, Geologist	
	Alicia Carpenter, Part time drill Geologist	
	Yuliana Proenza, Part time drill Geologist	
	Ehsan Salmabadi, Geologist	
	Edward Dashwood, Geologist	
	Ross Easterbrook, Part time drill Geologist	
	David Cox, Part time drill Geologist	
	Kelley Wynne, Part time drill Geologist	
	Darcy Kowalski, Geotechnician	
	Matthew Huszar, Geotechnician	
	Devin Tompkins, Part time Core Cutter	
	Bryan Falbridge, Part time Core Cutter	
	Michelle Labelle, Core Cutter	
Calendar Days Worked		64
Man Days		210
Food & Accommodation (per day)		$50.00
Average Cost per man day		$300.00
Total Cost per man day		$63,000.00
Cost of logging materials and supplies		$7,512.16
Core Racks		$10,625.76
Cost of assaying		$124,149.19
Total Core Logging and Processing Cost		$205,287.11
Total Drilling Cost		$640,904.95

Type of Work	**Trenching**	
Dates	June 3rd to July 10th	
Calendar Days Worked		8
Man days		8
250 Kobelco Excavator hours		49
Average cost per man day		$300.00
Total cost for man days		$2,400.00
D8R Caterpillar hours		8
D8R Caterpillar rate per hour		$180.00
Total D8R Caterpillar cost		$1,440.00
250 Kobelco Excavator cost per hour		$140.00
Total 250 Kobelco Excavator cost		$6,860.00
Total Direct Equipment Cost		**$10,700.00**

	Mapping and Sampling, Geological Support for Trenching Program	
Dates	June 3rd to July 10th	
Personnel Names	Ehsan Salmabadi, Geologist	
	Edward Dashwood, Geologist	

Nick Bazowski, Geologist

Calendar Days Worked	9
Man Days	19
Food & Accommodation (per day)	$50.00
Total Food & Accommodation cost	$950.00
Average Wage Cost per man	$242.00
Total Wage Cost	$4,598.00
Assay Cost of 57 samples collected	$1,582.76
Cost of shipping	$159.60
Reporting costs	$1,860.00
Supplies	$925.00
Direct Geological Trenching Support cost	**$10,075.36**
Total Trenching Cost	**$20,775.36**

Soil Sampling & Regional Mapping Program

June 3rd to September 29th

Man Days	97
Food & Accommodation (per day)	$50.00
Total Food & Accommodation cost	$4,850.00
Average Wage Cost per man	$242.00
Total Wage Cost	$23,474.00
Total Soil Samples taken:	1545
Total Rock Samples taken:	23
Total Shipping Cost:	$548.09
Totally Assay Cost(From ALS spreadsheet):	$37,840.79
Kraft Bags:	$386.25
Ore Bags:	$44.38
Rice Bags:	$10.00
Gas:	$400.00
Total Regional Program Cost	**$67,553.51**

Metallurgical Test Work Program

SGS Canada Inc.	May 1st to September 15th
Report Study & Analysis	**$25,442.81**

Bulk Test Pit Sampling Program

Type of Work:	**Overburden, Stripping and Removal**
Dates:	August 10th to September 6th
Personnel Names:	Kevin Etzertza, Elvis Fjellner, Byron Lindstrom, Herbert Henyu
Klappan River Services	
250 Kobelco Excavator hours:	30

250 Kobelco Excavator rate/hr:	$140
Grader hours:	16
Grader rate/hour:	$130
Iyon Ketchika Contracting	
Link Belt Excavator hours:	270
Link Belt Excavator rate/hour:	$170
Dease River Development Corp	
12 tonne Dump Truck hours:	81.5
12 tonne Dump Truck rate/hour:	$100
D8r Caterpillar hours:	185
D8r Caterpillar rate/hour:	$180
Taiga Ventures	
Excavator hours:	17
Excavator rate/hour:	$230
Etzertza Contracting	
12 tonne Dump Truck hours:	317
12 tonne Dump Truck rate/hour:	$100
Fuel (+ truck):	$24 338.06
Calendar Days Worked:	28
Man Days:	112
Room and Board/day:	$52
Room and Board Total:	$5,824
Work Cost Total:	$153,578.06

Type of Work:	**Ore/Waste Removal**
Dates:	September 6th to October 17th
Personnel Names:	Kevin Etzertza, Elvis Fjellner, Byron Lindstrom, Herbert Henyu
Klappan River Services	
250 Kobelco Excavator hours:	3
250 Kobelco Excavator rate/hr:	$140

12 tonne Dump Truck hours:	193
12 tonne Dump Truck rate/hour:	$100
Fuel (+ truck):	$27,403.18
Calendar Days Worked:	28
Man Days:	112
Room and Board/day:	$52
Room and Board Total:	$5,824
Work Cost Total:	$155,563.18

Type of Work:	**Mapping and Sampling**
Dates:	August 17th to October 17th
Personnel Names:	Nick Bazowski, Ehsan Salmabadi, Ross Easterbrook, Edd Dashwood, David Cox, Kelly Wynne, Matt Haszar, Devon Thompkins, Brian Fairbridge
Calendar Days Worked:	60
Man Days:	200
Average cost/man day:	$255.25
Room and Board/day:	$52
Bean Pump Equipment Rental:	$2,500
Room and Board Total:	$10 400
Work Cost Total:	93,675.00

Type of Work:	**Channel Sampling**
Dates:	August 17th to October 2nd
# of Samples to Chemex:	137
# of Samples to In House Lab:	290
Average cost per sample (Chemex):	$47.12
Average cost per sample (In House):	$15.09
Work Cost Total:	$10,831.54

Type of Work:	**Drilling and Blasting (+Labor)**
Dates:	September 6th to October 17th
Personnel Names:	Dustin Nole, Wayne of McCaw Drilling and Blasting Ltd.
Calendar Days Worked:	35 & 50
Man Days:	35 & 37
Average cost/man day:	$200 & $670
Drill cost/hour:	$165
Drill hours:	215.5
Powder Truck hours:	35
Powder Truck cost/hour:	$220

Room and Board/day:		$52
Room and Board Total:		$4,420
Work Cost Total:		$75,047.50

Type of Work:	**Blasting**	
Dates:	September 6th to October 17th	
# of Blasts:		15
Cost of Explosive:		**$31,756.35**

Type of Work:	**Percussion Drill Chip Sampling**	
Dates:	August 17th to October 2nd	
# of Samples:		244
Average cost per sample (In House):		$15.09
Work Cost Total:		**$3,681.96**

Type of Work:	**Pit Wall Chip Sampling**	
Dates:	August 17th to October 2nd	
# of Samples:		143
Average cost per sample (In House):		$15.09
Work Cost Total:		**$2,157.87**

Type of Work:	**Muck Sampling + Labor**	
Dates:	September 18th to October 16th	
Personnel Names:	Margaret Fajellner	
Calendar Days Worked:		17
Man Days:		17
Average cost/man day:		$200
# of Samples:		498
Average cost per sample (In House):		$15.09
Work Cost Total:		**$10,914.82**

Type of Work:	**Surveying**	
Dates:	September 15th to October 30th	
Personnel Names:	Underhill Geomatics Ltd., Richard Thompson, Bryce	
Calendar Days Worked:		40
Man Days:		40
Average cost/man day:		$400
Room and Board/day:		$52
Room and Board Total:		**$2,080**
Work Cost Total:		**$18,915.00**

Bulk Test Pit Sampling Program Sub Totals

Type of Work	Work Cost
Overburden, Stripping and Removal	$153,578.06
Ore/Waste Removal	$155,563.18
Mapping and Sampling	$53,675.00
Channel Sampling	$10,831.54
Drilling and Blasting	$75,047.50
Blasting (Explosives)	$31,756.35

Soil Baseline monitoring	$5,566.02
Aquatic Baseline monitoring	$16,033.55
TOTAL	$242,305.66

Grand Total 2009 Expenditures	$1,541,651.50

I make this solemn declaration conscientiously believing it to be true and knowing that it is of the same force and effect as if made under oath and by virtue of the Canada Evidence Act.

Declared before me at Vancouver in the Province of British Columbia this 2nd day of February, year 2010.

Respectfully Submitted,

Kristian L. Whitehead, B.Sc., ~~P.Geo~~ GIT.

12.0 Statement of Qualifications

I, Kristian L. Whitehead, resident of North Vancouver, British Columbia, do certify that:

1. I graduated from the University of Victoria in May 2004 with a B.Sc. in Earth and Ocean Sciences;

2. From November 2006, I have been registered as a Geologist In Training, G.I.T., with the Association of Professional Engineers and Geosciences of British Columbia (Reg. No. 143538);

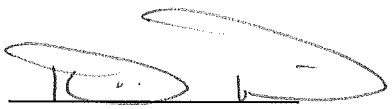

3. From 2003 to present, I have been actively engaged in mineral exploration in British Columbia and the Yukon Territory;

4. I am presently employed with the Hawthorne Gold Corporation as Senior Project Geologist;

5. I have personally participated in the logistical support, fieldwork and analysis of data for the filed undertakings herein.

6. I presently hold options in Hawthorne Gold Corporation prior to and during the disclosure of this report.

Respectfully Submitted,

Kristian L. Whitehead, B.Sc., ~~P.Geo~~ GIT.

CERTIFICATE VA09056958

Project: H1003

P.O. No.: HGC 290

This report is for 7 Rock samples submitted to our lab in Vancouver, BC, Canada on 12-JUN-2009.

The following have access to data associated with this certificate:

JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY	ANGEL LEE

SAMPLE PREPARATION

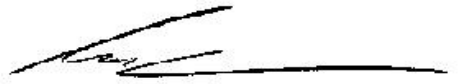

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-21	Sample logging - ClientBarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

To: **HAWTHORNE GOLD CORP.**
ATTN: WILLIAM HAY

CERTIFICATE VA09057702

Project: Cassiar Camp

P.O. No.:

This report is for 220 Soil samples submitted to our lab in Vancouver, BC, Canada on 6-JUN-2009.

The following have access to data associated with this certificate:

JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY	ANGEL LEE

SAMPLE PREPARATION

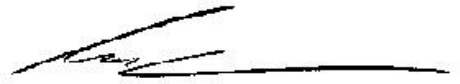

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
SCR-41	Screen to -180um and save both

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-ICP21	Au 30g FA ICP-AES Finish	ICP-AES
ME-MS41	51 anal. aqua regia ICPMS

CERTIFICATE VA09058204

Project: H1002

P.O. No.:

This report is for 233 Soil samples submitted to our lab in Vancouver, BC, Canada on 19-JUN-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

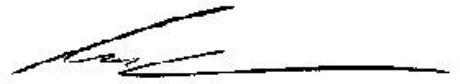

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
EXTRA-01	Extra Sample received in Shipment
SCR-41	Screen to -180um and save both

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION
ME-MS41	51 anal. aqua regia ICPMS

To: **HAWTHORNE GOLD CORP.**
ATTN: WILLIAM HAY
SUITE 1580 ONE BENTAL CENTRE
505 BURRARD, BOX 72
VANCOUVER BC V7X 1M5

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA09058209

Project: H1003

P.O. No.: HGC 279

This report is for 7 Rock samples submitted to our lab in Vancouver, BC, Canada on 16-JUN-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

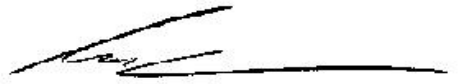

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-21	Sample logging - ClientBarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES
Ag-OG46	Ore Grade Ag - Aqua Regia	VARIABLE
ME-OG46	Ore Grade Elements - AquaRegia	ICP-AES
Zn-OG46	Ore Grade Zn - Aqua Regia	VARIABLE

CERTIFICATE VA09077133

Project: H1003

P.O. No.: HGC 0413

This report is for 5 Rock samples submitted to our lab in Vancouver, BC, Canada on 27-JUL-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

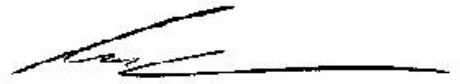

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-21	Sample logging - ClientBarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE OF ANALYSIS VA09080196

Method	CERTIFICATE COMMENTS
ME-MS41	Interference: Ca>10% on ICP-MS As,ICP-AES results shown.
ME-MS41	Gold determinations by this method are semi-quantitative due to the small sample weight used (0.5g).

CERTIFICATE VA09098580

Project: H1003

P.O. No.: HGC0472

This report is for 53 Rock samples submitted to our lab in Vancouver, BC, Canada on 9-SEP-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES
Ag-OG46	Ore Grade Ag - Aqua Regia	VARIABLE
ME-OG46	Ore Grade Elements - AquaRegia	ICP-AES

To: **HAWTHORNE GOLD CORP.**
ATTN: WILLIAM HAY
SUITE 1580 ONE BENTAL CENTRE
505 BURRARD, BOX 72
VANCOUVER BC V7X 1M5

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA09101394

Project: H1003

P.O. No.: HGC 472

This report is for 3 Rock samples submitted to our lab in Vancouver, BC, Canada on 16-SEP-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-21	Sample logging - ClientBarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09080194

Project: H1003

P.O. No.: HGC 460

This report is for 14 Rock samples submitted to our lab in Vancouver, BC, Canada on 4-AUG-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09084570

Project: H1003

P.O. No.: HGC 0472

This report is for 33 Rock samples submitted to our lab in Vancouver, BC, Canada on 10-AUG-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL	JOHN DADDS	WILLIAM HAY
ANGEL LEE	KRISTIAN WHITEHEAD	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09084571

Project: H1003

P.O. No.: HGC 0472

This report is for 100 Rock samples submitted to our lab in Vancouver, BC, Canada on 10-AUG-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09091378

Project: H1003

P.O. No.: HGC0472

This report is for 31 Rock samples submitted to our lab in Vancouver, BC, Canada on 26-AUG-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

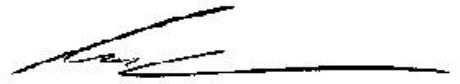

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-21	Sample logging - ClientBarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter

CERTIFICATE VA09098577

Project: H1003

P.O. No.: HGC0472

This report is for 5 Rock samples submitted to our lab in Vancouver, BC, Canada on 9-SEP-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

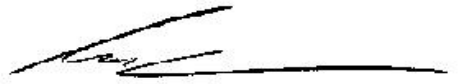

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-21	Sample logging - ClientBarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09104181

Project: H1003

P.O. No.:

This report is for 10 Rock samples submitted to our lab in Vancouver, BC, Canada on 18-SEP-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

To: **HAWTHORNE GOLD CORP.**

P.O. No.: HGC 290

This report is for 28 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 12-JUN-2009.

The following have access to data associated with this certificate:

JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY	ANGEL LEE

SAMPLE PREPARATION

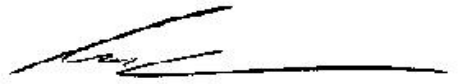

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

CERTIFICATE VA09058202

Project: H1003

P.O. No.: HGC 265

This report is for 77 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 9-JUN-2009.

The following have access to data associated with this certificate:

JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY	ANGEL LEE

SAMPLE PREPARATION

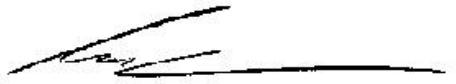

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
SPL-21q	Split sample - quadruplicate
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09059365

Project: H1003 - Cassiar Gold

P.O. No.: HGC 265

This report is for 68 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 9-JUN-2009.

The following have access to data associated with this certificate:

JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY	ANGEL LEE

SAMPLE PREPARATION

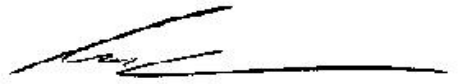

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09059366

Project: H1003 - Cassiar Gold

P.O. No.: HGC 265

This report is for 51 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 9-JUN-2009.

The following have access to data associated with this certificate:

JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY	ANGEL LEE

SAMPLE PREPARATION

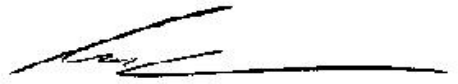

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES
ME-OG46	Ore Grade Elements - AquaRegia	ICP-AES
Cu-OG46	Ore Grade Cu - Aqua Regia	VARIABLE

CERTIFICATE VA09059367

Project: H1003 - Cassiar Gold

P.O. No.: HGC 265

This report is for 64 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 9-JUN-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES
ME-OG46	Ore Grade Elements - AquaRegia	ICP-AES
Cu-OG46	Ore Grade Cu - Aqua Regia	VARIABLE

CERTIFICATE VA09059921

Project: H1003 - Cassiar Gold

P.O. No.: HGC 265

This report is for 109 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 9-JUN-2009.

The following have access to data associated with this certificate:

JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY	ANGEL LEE

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
CRU-QC	Crushing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES
ME-OG46	Ore Grade Elements - AquaRegia	ICP-AES
Cu-OG46	Ore Grade Cu - Aqua Regia	VARIABLE

CERTIFICATE VA09060580

Project: H1003

P.O. No.: HGC 290

This report is for 55 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 12-JUN-2009.

The following have access to data associated with this certificate:

JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY	ANGEL LEE

SAMPLE PREPARATION

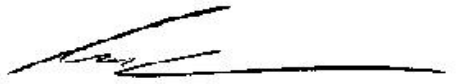

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09060581

Project: H1003

P.O. No.: HGC 290

This report is for 55 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 12-JUN-2009.

The following have access to data associated with this certificate:

JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY	ANGEL LEE

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES
ME-OG46	Ore Grade Elements - AquaRegia	ICP-AES
Cu-OG46	Ore Grade Cu - Aqua Regia	VARIABLE

CERTIFICATE VA09060583

Project: H1003

P.O. No.: HGC 290

This report is for 65 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 12-JUN-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09060584

Project: H1003

P.O. No.: HGC 265

This report is for 5 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 9-JUN-2009.

The following have access to data associated with this certificate:

JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY	ANGEL LEE

SAMPLE PREPARATION

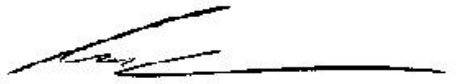

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
SPL-21q	Split sample - quadruplicate
PUL-31d	Pulverize Split - duplicate
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-21	Sample logging - ClientBarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES
Au-AVG	Average gold result

CERTIFICATE VA09076281

Project: H1003

P.O. No.: HGC 0413

This report is for 53 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 27-JUL-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES
ME-OG46	Ore Grade Elements - AquaRegia	ICP-AES
Cu-OG46	Ore Grade Cu - Aqua Regia	VARIABLE

P.O. No.:

This report is for 1 Drill Core sample submitted to our lab in Vancouver, BC, Canada on 24-JUL-2009.

The following have access to data associated with this certificate:

WILLIAM HAY	ANGEL LEE	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
FND-02	Find Sample for Addn Analysis

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

To: **HAWTHORNE GOLD CORP.**
ATTN: ANGEL LEE

Project: H1003

P.O. No.: HGC 460

This report is for 113 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 4-AUG-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES
ME-OG46	Ore Grade Elements - AquaRegia	ICP-AES
Cu-OG46	Ore Grade Cu - Aqua Regia	VARIABLE

CERTIFICATE VA09080193

Project: H1003

P.O. No.: HGC 460

This report is for 67 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 4-AUG-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09083643

Project: H1003

P.O. No.: HGC 0483

This report is for 32 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 6-AUG-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

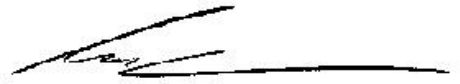

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES
ME-OG46	Ore Grade Elements - AquaRegia	ICP-AES
Cu-OG46	Ore Grade Cu - Aqua Regia	VARIABLE

CERTIFICATE VA09083645

Project: H1003

P.O. No.: HGC 0483

This report is for 45 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 6-AUG-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09084225

Project: H1003

P.O. No.: HGC 0472

This report is for 34 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 10-AUG-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09084226

Project: H1003

P.O. No.: HGC 0472

This report is for 11 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 10-AUG-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

Project: H1003

P.O. No.: HGC 0472

This report is for 10 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 10-AUG-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES
ME-OG46	Ore Grade Elements - AquaRegia	ICP-AES
Cu-OG46	Ore Grade Cu - Aqua Regia	VARIABLE

CERTIFICATE VA09084573

Project: H1003

P.O. No.: HGC 0472

This report is for 5 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 10-AUG-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-21	Sample logging - ClientBarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09088171

Project: H1003

P.O. No.: HCG 0472

This report is for 31 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 17-AUG-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES
ME-OG46	Ore Grade Elements - AquaRegia	ICP-AES
Cu-OG46	Ore Grade Cu - Aqua Regia	VARIABLE

CERTIFICATE VA09088754

Project: H1003

P.O. No.: HGC 0472

This report is for 46 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 19-AUG-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup

CERTIFICATE VA09089552

Project: H1003

P.O. No.: HGC 0472

This report is for 58 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 24-AUG-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

P.O. No.: HGC 0472

This report is for 41 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 24-AUG-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09089784

Project: H1003

P.O. No.: HGC 0472

This report is for 44 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 24-AUG-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09089786

Project: H1003

P.O. No.: HGC 0472

This report is for 22 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 24-AUG-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09090678

Project: H1003

P.O. No.: HGC 0472

This report is for 5 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 19-AUG-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
SPL-21q	Split sample - quadruplicate
PUL-31d	Pulverize Split - duplicate
WSH-21	"Wash" crushers
WSH-22	"Wash" pulverizers
LOG-21	Sample logging - ClientBarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES
Au-AVG	Average gold result

Project:

P.O. No.: HGC0472

This report is for 26 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 26-AUG-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

CERTIFICATE VA09091376

Project: H1003

P.O. No.: HGC0472

This report is for 30 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 26-AUG-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09091377

Project: H1003

P.O. No.: HGC0472

This report is for 32 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 26-AUG-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

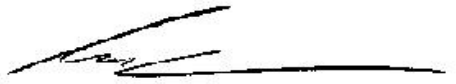

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES
ME-OG46	Ore Grade Elements - AquaRegia	ICP-AES
Cu-OG46	Ore Grade Cu - Aqua Regia	VARIABLE

This report is for 28 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 9-SEP-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

CERTIFICATE VA09098581

Project: H1003

P.O. No.: HGC0472

This report is for 17 Drill Core samples submitted to our lab in Vancouver, BC, Canada on 9-SEP-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
PUL-31d	Pulverize Split - duplicate
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
SPL-21t	Split Sample - Triplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

Finalized Date: 6-SEP-2009
Account: HAWGOL

CERTIFICATE VA09092772

Project: H1003

P.O. No.: HGC 0472

This report is for 19 Rock samples submitted to our lab in Vancouver, BC, Canada on 31-AUG-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

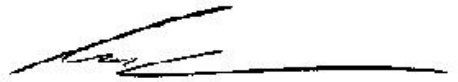

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

To: **HAWTHORNE GOLD CORP.**
ATTN: WILLIAM HAY
SUITE 1580 ONE BENTAL CENTRE
505 BURRARD, BOX 72
VANCOUVER BC V7X 1M5

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE VA09094286

Project:

P.O. No.: HGC 0472

This report is for 38 Rock samples submitted to our lab in Vancouver, BC, Canada on 1-SEP-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

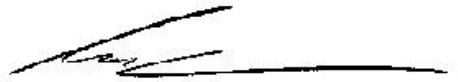

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09097220

Project: H1003

P.O. No.: HGC0472

This report is for 33 Rock samples submitted to our lab in Vancouver, BC, Canada on 8-SEP-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

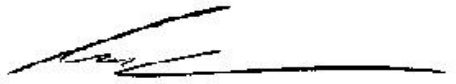

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09097223

Project: H1003

P.O. No.: HGC0472

This report is for 5 Rock samples submitted to our lab in Vancouver, BC, Canada on 8-SEP-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

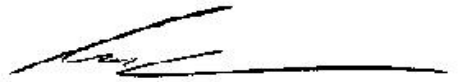

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-21	Sample logging - ClientBarCode
CRU-QC	Crushing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

CERTIFICATE VA09101392

Project: H1003

P.O. No.: HGC0472

This report is for 31 Rock samples submitted to our lab in Vancouver, BC, Canada on 16-SEP-2009.

The following have access to data associated with this certificate:

ANDREW CALDWELL ANGEL LEE	JOHN DADDS KRISTIAN WHITEHEAD	WILLIAM HAY

SAMPLE PREPARATION

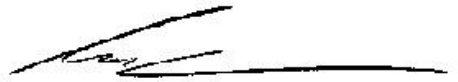

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-21	Sample logging - ClientBarCode
PUL-QC	Pulverizing QC Test
CRU-31	Fine crushing - 70% <2mm
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-GRA21	Au 30g FA-GRAV finish	WST-SIM
ME-ICP41	35 Element Aqua Regia ICP-AES	ICP-AES

Re: Memo: Taurus Metallurgy

Background:

It is our understanding that the objective of the test programme was to evaluate the amenability of samples of Taurus material, to be processed through the nearby Table Mountain mill.

The aim, therefore is to conduct the following:

- A brief mineralogical study of the sample to evaluate its bulk modal characteristics and provide some qualitative assessment of texture and liberation size.
- A gravity release study to evaluate the proportion of gravity-recoverable gold
- A flotation study to determine the potential to produce a gold concentrate at a mass pull ideally suitable for the existing equipment to process, or failing that to establish what is needed to process the material.

Of these objectives, the first two are complete and the third is well underway.

Three samples were received, namely QV, T3 and T4 samples. All three samples were studied mineralogically, and a composite comprising the three was created for initial metallurgical testing, with the aim of running tests on the individual samples at the end.

Taurus Mill:

The Taurus mill employed a gravity circuit, followed by a flotation circuit, the concentrate from which was leached to recover the gold. According the Taurus 43-101 report issued by Wardrop in March 2009, during the years 1986-1988, the circuit key operating stats were:
Tons treated: 33,700 tons, gold head grade 4.2 g/t
Gravity conc: mass pull minimal, Au recovery 39%
Flotation conc: 900 tons (mass pull 3%), Au recovery 51%
The ore was described in the report as “T4” material.
One assumes this defines the limitations of the current circuit.

Previous testing on the different material types:

T3: Testing was conducted by Westcoast Mineral Testing Co. in 1987 – yielding minimal gravity recovery, and 94% flotation recovery – but at a 30% mass pull. A more detailed study was conducted in 1994, yielded similar results – low gravity recoveries (8-31%) and flotation recovery of 94%, at a mass pull of 15% - still far higher than the plant had historically yielded. Hazen Research conducted flotation tests on T3 material in 1996. The low grade samples (1.3-3 g/t) yielded up to 97% recovery at mass pull rates in the 10% range. The T3 concentrates were refractory to cyanidation.
T4: Hazen tested a number of low-grade T4 materials, and created flotation concentrates recovering 87-97% of the gold to mass pulls ranging from 5-15%. T4 cyanided better than T3, with recoveries in the 34-85% range. Unleached gold was found to be finely dispersed, or atomically dispersed in pyrite.
Both labs failed to float gold selectively from pyrite…. unsurprisingly given the considerable amount of gold contained within the (presumably) pyrite.

Mineralogy:

A report has been issued entitled “An XRD and Optical Investigation into the Mineralogy of Three Composite Samples”. This report was issued on September 25th 2009.
This report described the three samples as:

QV: 75.4% Quartz, 7.1% Ankerite, 4.4% pyrite, 4.2% muscovite, 4.1% dolomite. Small amounts of arsenopyrite, galena and chalcopyrite. While the mineralogy describes these as “major” sulphide minerals, the ICP scan determined the As, Cu and Pb contents to be just 450, 32 and 86 g/t respectively – so these must be just minor phase. The rutile (2%) in this sample may affect the gravity circuit.
T3: 24.6% Ankerite, 21% Quartz, 16.2% muscovite, 11.5% pyrite. Again, the other suphides are clearly just minor components, the As, Cu and Pb assays being 600, 36 and 180 g/t respectively.
T4: This is similar to T3; 25% Ankerite, 21% quartz, 12% pyrite and 11% muscovite. Again the other sulphides are described as ”major” but the As, Cu and Pb assays are low at 930, 34 and 280 g/t respectively.

The cursory examination for gold grains found two small grains in arsenopyrite. This study holds no statistical validity however and should be ignored from a process perspective…the best indication of gold mineralogy coming from the gravity concentration, flotation and cyanidation work in this case.

Gravity concentration:

A release analysis was conducted on the combined sample, involving a Deister rougher table, and a Mozley panner for cleaning. The objective was to locate the liberated gold into a high grade product on the Mozley, with the sulphides reporting to the Mozley tails or Deister middlings. This was conducted by size, the results summarised in Figure 1.

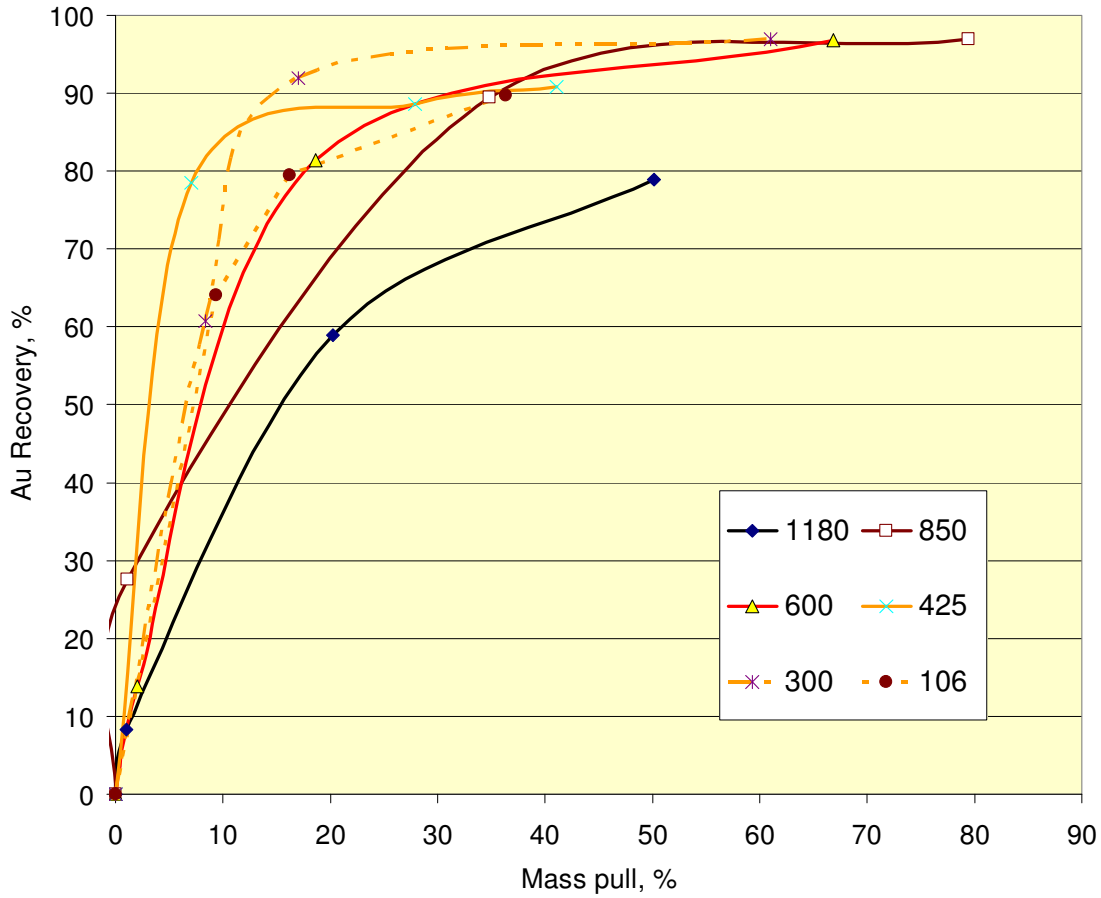

Figure 1: Gravity Release Analysis by Size

The gravity release study failed to indicate much in the way of gravity-recoverable gold. Unfortunately, mass recoveries to the Mozley concentrates were too high to evaluate whether free gold was being recovered with pyrite or whether gold was being recovered *in* pyrite. Further work may be needed here to clarify the results – although even at high mass pull rates, gold recoveries were less than spectacular. At the coarser sizes (where the mass pull was lower, gold recoveries were in the 10% range at 1180um and 28% at 850 microns – suggesting that perhaps 20-30% of the gold could be recovered by gravity into a concentrate containing 1% of the mass. This would likely, mostly, upgrade to typical ultra-high grade gravity concentrates.

The gravity study indicated that 90% of the gold can be pre-concentrated into 30% of the mass at relatively coarse sizes, though recovery was poorer at +1180mm, suggesting a sulphide liberating size may exist at this point (~1mm).

Subsequent 10kg tests, producing material to be used for flotation testing, yielded recoveries of 6% at 0.4% mass pull, and 36% at 3.2% mass pull – in line with the release data shown above and again indicating the presence of very little liberated gold.

Flotation:

The effect of grind on rougher flotation was tested in tests 1-5. The results show a clear insensitivity to grind, with the best results resulting from the coarsest grind sizes (probably as the reagent dosage, which was largely unchanged throughout the programme was best suited to the coarser grind levels). This again points to the gold being closely associated with coarsely disseminated sulphides.

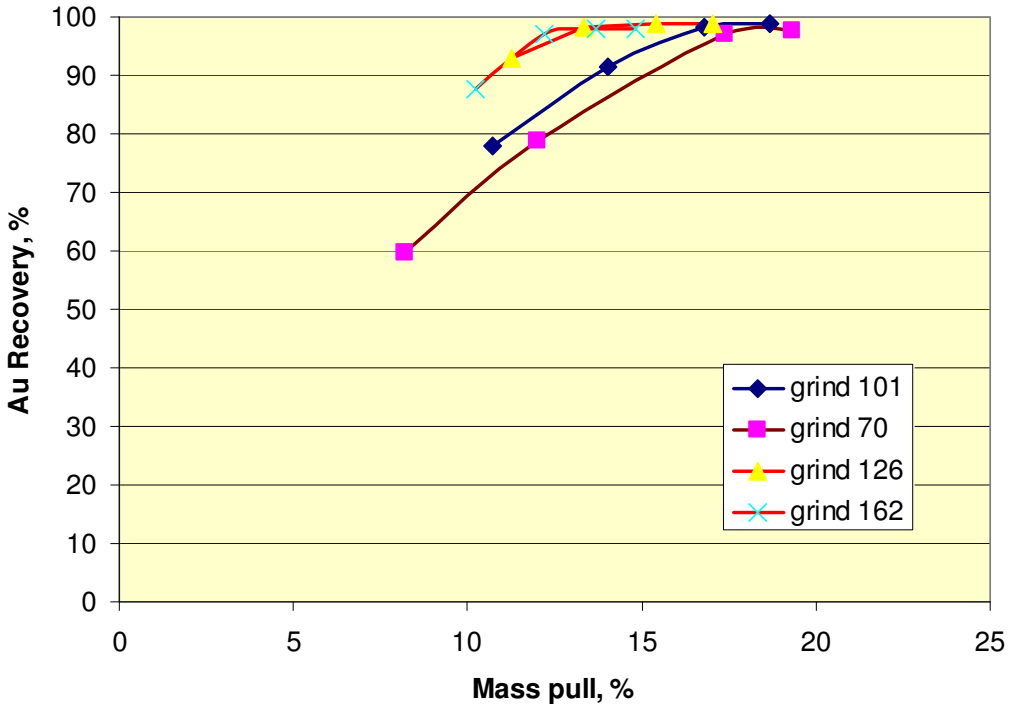

Figure 2: Effect of Grind on Au Recovery vs Mass Pull

Overall, rougher flotation yielded recoveries of up to 98% at 15% mass pull.

Four Cleaner tests were conducted so far. These tests have been designed to test pyrite flotation and pyrite rejection in cleaning, to see if the gold could be floated separate from the pyrite (tests 8,9). The results are shown in Figure 3.

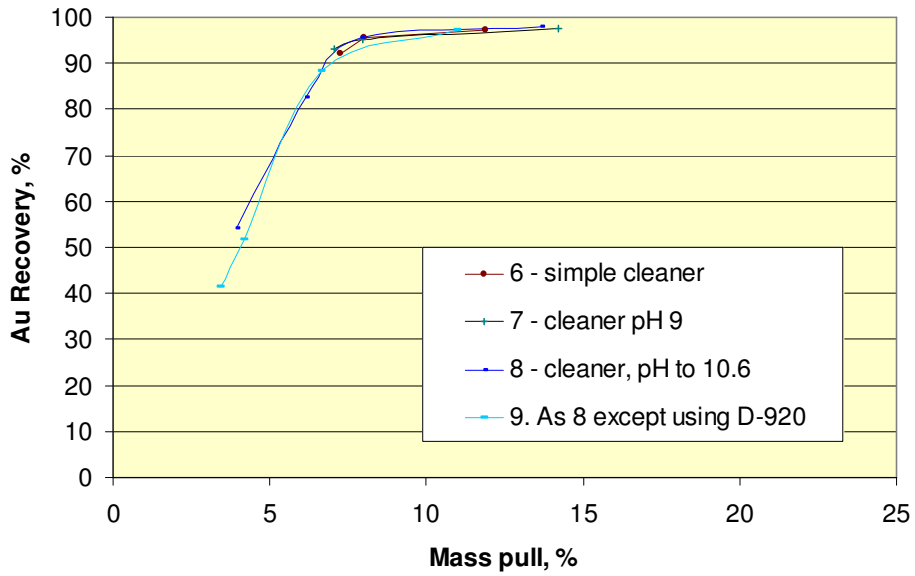

Figure 3: Effect of Cleaning: Gold recovery vs Mass Pull

All tests follow exactly the same mass pull/recovery curve, showing that the gold is most likely physically associated with the sulphides, and cannot, under these conditions, be floated from them.

Furthermore there is a clear optimum mass pull – roughly 7%, at which 95% of the gold is recovered – below this and gold losses are heavy, above this and negligible further gold is recovered. Although the assays are not available to back this up, it seems likely that, at this point, sulphide recovery is complete.

Conclusions on work so far:

The results (and indeed previous data) point to a close physical association between the gold and the sulphides. Accordingly, whenever the sulphide content is greater than 3% (assumed to be the mass pull limit for the existing mill) losses of recoverable gold will be incurred with the existing mill. Assuming the current sample is representative of the resource as a whole – gold recoveries to 3% mass pull will be about 40%, and 55% of the gold would be floatable to a high grade concentrate but lost due to concentrate handling constraints. Clearly this is not the optimum way forward for this project.

Currently, the most likely scenario is floating a ~60 g/ton concentrate at about 95% recovery. This likely won't be leachable so will either need to be pre-oxidised or shipped off site – unless the resource is sizeable the latter seems the most likely option.

This is worth, at present prices about $2000/ton, but it will contain significant As – perhaps up to 1% which could be a significant problem with smelters. This needs to be investigated through discussions with candidate smelters, or employment of a concentrate sales consultant.

Recommended Future Work:

There are three scenarios that need to be evaluated:

- The gold (or most of it) may be released by fine regrinding and cleaning. Fine regrinding needs to be tested – although evidence from past testing does not point to this being hopeful. This testing is underway
- The gold is associated with the arsenopyrite, or the gold is specifically not associated with the arsenopyrite. Either way, arsenopyrite flotation from pyrite is possible and should be tested as it may either produce a very high grade concentrate, or it would significantly reduce the As content in the pyrite concentrate. This is not an easy separation but has been used in production plants on many occasions.
- The resource actually contains significantly less pyrite and especially arsenopyrite than these samples. A reality check on the representativity of the samples is suggested.

If the resource warrants the capital, pre-oxidation options could be investigated but we would suggest this might be a last resort option for what we assume is a relatively small project.

Reference Information

Additional Comments for Sample Listed:

Samplenum	Matrix	Report Remarks	Sample Comment

Methods Listed (if applicable):

ALS Test Code	Matrix	Test Description	Method Reference**
ALK-PCT-VA	Water	Alkalinity by Auto. Titration	APHA 2320 "Alkalinity"

This analysis is carried out using procedures adapted from APHA Method 2320 "Alkalinity". Total alkalinity is determined by potentiometric titration to a pH 4.5 endpoint. Bicarbonate, carbonate and hydroxide alkalinity are calculated from phenolphthalein alkalinity and total alkalinity values.

ALK-PCT-VA	Water	Alkalinity by Auto. Titration	APHA 2320 Alkalinity

This analysis is carried out using procedures adapted from APHA Method 2320 "Alkalinity". Total alkalinity is determined by potentiometric titration to a pH 4.5 endpoint. Bicarbonate, carbonate and hydroxide alkalinity are calculated from phenolphthalein alkalinity and total alkalinity values.

ANIONS-BR-IC-VA	Water	Bromide by Ion Chromatography	APHA 4110 B.

This analysis is carried out using procedures adapted from APHA Method 4110 B. "Ion Chromatography with Chemical Suppression of Eluent Conductivity" and EPA Method 300.0 "Determination of Inorganic Anions by Ion Chromatography".

ANIONS-CL-IC-VA	Water	Chloride by Ion Chromatography	APHA 4110 B.

This analysis is carried out using procedures adapted from APHA Method 4110 B. "Ion Chromatography with Chemical Suppression of Eluent Conductivity" and EPA Method 300.0 "Determination of Inorganic Anions by Ion Chromatography".

ANIONS-F-IC-VA	Water	Fluoride by Ion Chromatography	APHA 4110 B.

This analysis is carried out using procedures adapted from APHA Method 4110 B. "Ion Chromatography with Chemical Suppression of Eluent Conductivity" and EPA Method 300.0 "Determination of Inorganic Anions by Ion Chromatography".

ANIONS-NO2-IC-VA	Water	Nitrite by Ion Chromatography	APHA 4110 B.

This analysis is carried out using procedures adapted from APHA Method 4110 B. "Ion Chromatography with Chemical Suppression of Eluent Conductivity" and EPA Method 300.0 "Determination of Inorganic Anions by Ion Chromatography". Specifically, the nitrite detection is by UV absorbance and not conductivity.

ANIONS-NO3-IC-VA	Water	Nitrate by Ion Chromatography	APHA 4110 B.

This analysis is carried out using procedures adapted from APHA Method 4110 B. "Ion Chromatography with Chemical Suppression of Eluent Conductivity" and EPA Method 300.0 "Determination of Inorganic Anions by Ion Chromatography". Specifically, the nitrate detection is by UV absorance and not conductivity.

ANIONS-SO4-IC-VA	Water	Sulfate by Ion Chromatography	APHA 4110 B.

This analysis is carried out using procedures adapted from APHA Method 4110 B. "Ion Chromatography with Chemical Suppression of Eluent Conductivity" and EPA Method 300.0 "Determination of Inorganic Anions by Ion Chromatography".

CARBONS-DOC-VA	Water	Dissolved organic carbon by combustion	APHA 5310 "TOTAL ORGANIC CARBON (TOC)"

This analysis is carried out using procedures adapted from APHA Method 5310 "Total Organic Carbon (TOC)". Dissolved carbon (DOC) fractions are determined by filtering the sample through a 0.45 micron membrane filter prior to analysis.

CARBONS-DOC-VA	Water	Dissolved organic carbon by combustion	APHA 5310 TOTAL ORGANIC CARBON (TOC)

This analysis is carried out using procedures adapted from APHA Method 5310 "Total Organic Carbon (TOC)". Dissolved carbon (DOC) fractions are determined by filtering the sample through a 0.45 micron membrane filter prior to analysis.

EC-PCT-VA	Water	Conductivity (Automated)	APHA 2510 Auto. Conduc.

This analysis is carried out using procedures adapted from APHA Method 2510 "Conductivity". Conductivity is determined using a conductivity electrode.

HARDNESS-CALC-VA	Water	Hardness	APHA 2340B

Hardness is calculated from Calcium and Magnesium concentrations, and is expressed as calcium carbonate equivalents.

HG-DIS-CCME-CVAFS-VA	Water	Diss. Mercury in Water by CVAFS (CCME)	EPA 3005A/245.7

This analysis is carried out using procedures adapted from "Standard Methods for the Examination of Water and Wastewater" published by the American Public Health Association, and with procedures adapted from "Test Methods for Evaluating Solid Waste" SW-846 published by the United States Environmental Protection Agency (EPA). The procedures may involve preliminary sample treatment by filtration (EPA Method 3005A) and involves a cold-oxidation of the acidified sample using bromine monochloride prior to reduction of the sample with stannous chloride. Instrumental analysis is by cold vapour atomic fluorescence spectrophotometry (EPA Method 245.7).

HG-TOT-CCME-CVAFS-VA	Water	Total Mercury in Water by CVAFS (CCME)	EPA 245.7

This analysis is carried out using procedures adapted from "Standard Methods for the Examination of Water and Wastewater" published by the American Public Health Association, and with procedures adapted from "Test Methods for Evaluating Solid Waste" SW-846 published by the United States Environmental Protection Agency (EPA). The procedure involves a cold-oxidation of the acidified sample using bromine monochloride prior to reduction of the sample with stannous chloride. Instrumental analysis is by cold vapour atomic fluorescence spectrophotometry (EPA Method 245.7).

Reference Information

Methods Listed (if applicable):

ALS Test Code	Matrix	Test Description	Method Reference**
IONBALANCE-VA	Water	Ion Balance Calculation	APHA 1030E

Cation Sum, Anion Sum, and Ion Balance (as % difference) are calculated based on guidance from APHA Standard Methods (1030E Checking Correctness of Analysis). Because all aqueous solutions are electrically neutral, the calculated ion balance (% difference of cations minus anions) should be near-zero.

Cation and Anion Sums are the total meq/L concentration of major cations and anions. Dissolved species are used where available. Minor ions are included where data is present. Ion Balance is calculated as:

Ion Balance (%) = [Cation Sum-Anion Sum] / [Cation Sum+Anion Sum]

MET-DIS-CCME-ICP-VA	Water	Diss. Metals in Water by ICPOES (CCME)	EPA SW-846 3005A/6010B

This analysis is carried out using procedures adapted from "Standard Methods for the Examination of Water and Wastewater" published by the American Public Health Association, and with procedures adapted from "Test Methods for Evaluating Solid Waste" SW-846 published by the United States Environmental Protection Agency (EPA). The procedures may involve preliminary sample treatment by acid digestion, using either hotblock or microwave oven, or filtration (EPA Method 3005A). Instrumental analysis is by inductively coupled plasma - optical emission spectrophotometry (EPA Method 6010B).

MET-DIS-CCME-MS-VA	Water	Diss. Metals in Water by ICPMS (CCME)	EPA SW-846 3005A/6020A

This analysis is carried out using procedures adapted from "Standard Methods for the Examination of Water and Wastewater" published by the American Public Health Association, and with procedures adapted from "Test Methods for Evaluating Solid Waste" SW-846 published by the United States Environmental Protection Agency (EPA). The procedures may involve preliminary sample treatment by acid digestion, using either hotblock or microwave oven, or filtration (EPA Method 3005A). Instrumental analysis is by inductively coupled plasma - mass spectrometry (EPA Method 6020A).

MET-TOT-CCME-ICP-VA	Water	Total Metals in Water by ICPOES (CCME)	EPA SW-846 3005A/6010B

This analysis is carried out using procedures adapted from "Standard Methods for the Examination of Water and Wastewater" published by the American Public Health Association, and with procedures adapted from "Test Methods for Evaluating Solid Waste" SW-846 published by the United States Environmental Protection Agency (EPA). The procedures may involve preliminary sample treatment by acid digestion, using either hotblock or microwave oven, or filtration (EPA Method 3005A). Instrumental analysis is by inductively coupled plasma - optical emission spectrophotometry (EPA Method 6010B).

MET-TOT-CCME-MS-VA	Water	Total Metals in Water by ICPMS (CCME)	EPA SW-846 3005A/6020A

This analysis is carried out using procedures adapted from "Standard Methods for the Examination of Water and Wastewater" published by the American Public Health Association, and with procedures adapted from "Test Methods for Evaluating Solid Waste" SW-846 published by the United States Environmental Protection Agency (EPA). The procedures may involve preliminary sample treatment by acid digestion, using either hotblock or microwave oven, or filtration (EPA Method 3005A). Instrumental analysis is by inductively coupled plasma - mass spectrometry (EPA Method 6020A).

NH3-SIE-VA	Water	Ammonia by SIE	APHA 4500 D. - NH3 NITROGEN (AMMONIA)

This analysis is carried out, on sulphuric acid preserved samples, using procedures adapted from APHA Method 4500-NH3 "Nitrogen (Ammonia)". Ammonia is determined using an ammonia selective electrode.

PH-PCT-VA	Water	pH by Meter (Automated)	APHA 4500-H "pH Value"

This analysis is carried out using procedures adapted from APHA Method 4500-H "pH Value". The pH is determined in the laboratory using a pH electrode

PH-PCT-VA	Water	pH by Meter (Automated)	APHA 4500-H pH Value

This analysis is carried out using procedures adapted from APHA Method 4500-H "pH Value". The pH is determined in the laboratory using a pH electrode

PO4-DO-COL-VA	Water	Dissolved ortho Phosphate by Colour	APHA 4500-P "Phosphorous"

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". All forms of phosphate are determined by the ascorbic acid colourimetric method. Dissolved ortho-phosphate (dissolved reactive phosphorous) is determined by direct measurement. Total phosphate (total phosphorous) is determined after persulphate digestion of a sample. Total dissolved phosphate (total dissolved phosphorous) is determined by filtering a sample through a 0.45 micron membrane filter followed by persulfate digestion of the filtrate.

PO4-DO-COL-VA	Water	Dissolved ortho Phosphate by Colour	APHA 4500-P Phosphorous

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". All forms of phosphate are determined by the ascorbic acid colourimetric method. Dissolved ortho-phosphate (dissolved reactive phosphorous) is determined by direct measurement. Total phosphate (total phosphorous) is determined after persulphate digestion of a sample. Total dissolved phosphate (total dissolved phosphorous) is determined by filtering a sample through a 0.45 micron membrane filter followed by persulfate digestion of the filtrate.

PO4-T-COL-VA	Water	Total Phosphate P by Color	APHA 4500-P "Phosphorous"

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". All forms of phosphate are determined by the ascorbic acid colourimetric method. Dissolved ortho-phosphate (dissolved reactive phosphorous) is determined by direct measurement. Total phosphate (total phosphorous) is determined after persulphate digestion of a sample. Total dissolved phosphate (total dissolved phosphorous) is determined by filtering a sample through a 0.45 micron membrane filter followed by persulfate digestion of the filtrate.

PO4-T-COL-VA	Water	Total Phosphate P by Color	APHA 4500-P Phosphorous

Reference Information

Methods Listed (if applicable):

ALS Test Code	Matrix	Test Description	Method Reference**

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". All forms of phosphate are determined by the ascorbic acid colourimetric method. Dissolved ortho-phosphate (dissolved reactive phosphorous) is determined by direct measurement. Total phosphate (total phosphorous) is determined after persulphate digestion of a sample. Total dissolved phosphate (total dissolved phosphorous) is determined by filtering a sample through a 0.45 micron membrane filter followed by persulfate digestion of the filtrate.

PO4-TD-COL-VA	Water	Total Dissolved Phosphate by Colour	APHA 4500-P Phosphorous

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". All forms of phosphate are determined by the ascorbic acid colourimetric method. Dissolved ortho-phosphate (dissolved reactive phosphorous) is determined by direct measurement. Total phosphate (total phosphorous) is determined after persulphate digestion of a sample. Total dissolved phosphate (total dissolved phosphorous) is determined by filtering a sample through a 0.45 micron membrane filter followed by persulfate digestion of the filtrate.

PO4-TD-COL-VA	Water	Total Dissolved Phosphate by Colour	APHA 4500-P " Phosphorous"

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". All forms of phosphate are determined by the ascorbic acid colourimetric method. Dissolved ortho-phosphate (dissolved reactive phosphorous) is determined by direct measurement. Total phosphate (total phosphorous) is determined after persulphate digestion of a sample. Total dissolved phosphate (total dissolved phosphorous) is determined by filtering a sample through a 0.45 micron membrane filter followed by persulfate digestion of the filtrate.

TDS-CALC-VA	Water	TDS (Calculation from EC)	APHA 1030E (20TH EDITION)

This analysis is carried out using procedures adapted from APHA 1030E "Checking Correctness of Analyses".

TKN-COL-VA	Water	Total Kjeldahl Nitrogen by Auto. Colour	APHA 4500-Norg (TKN)

This analysis is carried out using procedures adapted from APHA Method 4500-Norg "Nitrogen (Organic)". Total kjeldahl nitrogen is determined by sample digestion at 380 celcius with analysis using an automated colourimetric finish.

TN-CALC-VA	Water	TN by Calc (TKN + N+N)	BC MOE LABORATORY MANUAL (2005)

Total Nitrogen is determined by calculation by suming TKN and the NO2 and NO3 results.

TSS-VA	Water	Total Suspended Solids by Gravimetric	APHA 2540 D - GRAVIMETRIC

This analysis is carried out using procedures adapted from APHA Method 2540 "Solids". Solids are determined gravimetrically. Total Suspended Solids (TSS) are determined by filtering a sample through a glass fibre filter, TSS is determined by drying the filter at 104 degrees celsius.

TURBIDITY-VA	Water	Turbidity by Meter	APHA 2130 "Turbidity"

This analysis is carried out using procedures adapted from APHA Method 2130 "Turbidity". Turbidity is determined by the nephelometric method.

TURBIDITY-VA	Water	Turbidity by Meter	APHA 2130 Turbidity

This analysis is carried out using procedures adapted from APHA Method 2130 "Turbidity". Turbidity is determined by the nephelometric method.

**ALS test methods may incorporate modifications from specified reference methods to improve performance.

Chain of Custody numbers:

09-027887

The last two letters of the above test code(s) indicate the laboratory that performed analytical analysis for that test. Refer to the list below:

Laboratory Definition Code	Laboratory Location
VA	ALS LABORATORY GROUP - VANCOUVER, BC, CANADA

GLOSSARY OF REPORT TERMS

Surrogates are compounds that are similar in behaviour to target analyte(s), but that do not normally occur in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery. In reports that display the D.L. column, laboratory objectives for surrogates are listed there.
mg/kg - milligrams per kilogram based on dry weight of sample
mk/kg wwt - milligrams per kilogram based on wet weight of sample
mg/kg lwt - milligrams per kilogram based on lipid-adjusted weight
mg/L - unit of concentration based on volume, parts per million.
< - Less than.
D.L. - The reporting limit.
N/A - Result not available. Refer to qualifier code and definition for explanation.

Test results reported relate only to the samples as received by the laboratory.
UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.
Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.

Additional Comments for Sample Listed:

Samplenum	Matrix	Report Remarks	Sample Comments

Methods Listed (if applicable):

ALS Test Code	Matrix	Test Description	Analytical Method Reference(Based On)
ALK-PCT-VA	Water	Alkalinity by Auto. Titration	APHA 2320 "Alkalinity"

This analysis is carried out using procedures adapted from APHA Method 2320 "Alkalinity". Total alkalinity is determined by potentiometric titration to a pH 4.5 endpoint. Bicarbonate, carbonate and hydroxide alkalinity are calculated from phenolphthalein alkalinity and total alkalinity values.

ALK-PCT-VA	Water	Alkalinity by Auto. Titration	APHA 2320 Alkalinity

This analysis is carried out using procedures adapted from APHA Method 2320 "Alkalinity". Total alkalinity is determined by potentiometric titration to a pH 4.5 endpoint. Bicarbonate, carbonate and hydroxide alkalinity are calculated from phenolphthalein alkalinity and total alkalinity values.

ANIONS-BR-IC-VA	Water	Bromide by Ion Chromatography	APHA 4110 B.

This analysis is carried out using procedures adapted from APHA Method 4110 B. "Ion Chromatography with Chemical Suppression of Eluent Conductivity" and EPA Method 300.0 "Determination of Inorganic Anions by Ion Chromatography".

ANIONS-CL-IC-VA	Water	Chloride by Ion Chromatography	APHA 4110 B.

This analysis is carried out using procedures adapted from APHA Method 4110 B. "Ion Chromatography with Chemical Suppression of Eluent Conductivity" and EPA Method 300.0 "Determination of Inorganic Anions by Ion Chromatography".

ANIONS-F-IC-VA	Water	Fluoride by Ion Chromatography	APHA 4110 B.

This analysis is carried out using procedures adapted from APHA Method 4110 B. "Ion Chromatography with Chemical Suppression of Eluent Conductivity" and EPA Method 300.0 "Determination of Inorganic Anions by Ion Chromatography".

ANIONS-NO2-IC-VA	Water	Nitrite by Ion Chromatography	APHA 4110 B.

This analysis is carried out using procedures adapted from APHA Method 4110 B. "Ion Chromatography with Chemical Suppression of Eluent Conductivity" and EPA Method 300.0 "Determination of Inorganic Anions by Ion Chromatography". Specifically, the nitrite detection is by UV absorbance and not conductivity.

ANIONS-NO3-IC-VA	Water	Nitrate by Ion Chromatography	APHA 4110 B.

This analysis is carried out using procedures adapted from APHA Method 4110 B. "Ion Chromatography with Chemical Suppression of Eluent Conductivity" and EPA Method 300.0 "Determination of Inorganic Anions by Ion Chromatography". Specifically, the nitrate detection is by UV absorance and not conductivity.

ANIONS-SO4-IC-VA	Water	Sulfate by Ion Chromatography	APHA 4110 B.

This analysis is carried out using procedures adapted from APHA Method 4110 B. "Ion Chromatography with Chemical Suppression of Eluent Conductivity" and EPA Method 300.0 "Determination of Inorganic Anions by Ion Chromatography".

CARBONS-DOC-VA	Water	Dissolved organic carbon by combustion	APHA 5310 "TOTAL ORGANIC CARBON (TOC)"

This analysis is carried out using procedures adapted from APHA Method 5310 "Total Organic Carbon (TOC)". Dissolved carbon (DOC) fractions are determined by filtering the sample through a 0.45 micron membrane filter prior to analysis.

CARBONS-DOC-VA	Water	Dissolved organic carbon by combustion	APHA 5310 TOTAL ORGANIC CARBON (TOC)

This analysis is carried out using procedures adapted from APHA Method 5310 "Total Organic Carbon (TOC)". Dissolved carbon (DOC) fractions are determined by filtering the sample through a 0.45 micron membrane filter prior to analysis.

EC-PCT-VA	Water	Conductivity (Automated)	APHA 2510 Auto. Conduc.

This analysis is carried out using procedures adapted from APHA Method 2510 "Conductivity". Conductivity is determined using a conductivity electrode.

HARDNESS-CALC-VA	Water	Hardness	APHA 2340B

Reference Information

Methods Listed (if applicable):

ALS Test Code	Matrix	Test Description	Analytical Method Reference(Based On)

Hardness is calculated from Calcium and Magnesium concentrations, and is expressed as calcium carbonate equivalents.

HG-DIS-CCME-CVAFS-VA Water Diss. Mercury in Water by CVAFS (CCME) EPA 3005A/245.7

This analysis is carried out using procedures adapted from "Standard Methods for the Examination of Water and Wastewater" published by the American Public Health Association, and with procedures adapted from "Test Methods for Evaluating Solid Waste" SW-846 published by the United States Environmental Protection Agency (EPA). The procedures may involve preliminary sample treatment by filtration (EPA Method 3005A) and involves a cold-oxidation of the acidified sample using bromine monochloride prior to reduction of the sample with stannous chloride. Instrumental analysis is by cold vapour atomic fluorescence spectrophotometry (EPA Method 245.7).

HG-TOT-CCME-CVAFS-VA Water Total Mercury in Water by CVAFS (CCME) EPA 245.7

This analysis is carried out using procedures adapted from "Standard Methods for the Examination of Water and Wastewater" published by the American Public Health Association, and with procedures adapted from "Test Methods for Evaluating Solid Waste" SW-846 published by the United States Environmental Protection Agency (EPA). The procedure involves a cold-oxidation of the acidified sample using bromine monochloride prior to reduction of the sample with stannous chloride. Instrumental analysis is by cold vapour atomic fluorescence spectrophotometry (EPA Method 245.7).

IONBALANCE-VA Water Ion Balance Calculation APHA 1030E

Cation Sum, Anion Sum, and Ion Balance (as % difference) are calculated based on guidance from APHA Standard Methods (1030E Checking Correctness of Analysis). Because all aqueous solutions are electrically neutral, the calculated ion balance (% difference of cations minus anions) should be near-zero.

Cation and Anion Sums are the total meq/L concentration of major cations and anions. Dissolved species are used where available. Minor ions are included where data is present. Ion Balance is calculated as:

Ion Balance (%) = [Cation Sum-Anion Sum] / [Cation Sum+Anion Sum]

MET-DIS-CCME-ICP-VA Water Diss. Metals in Water by ICPOES (CCME) EPA SW-846 3005A/6010B

This analysis is carried out using procedures adapted from "Standard Methods for the Examination of Water and Wastewater" published by the American Public Health Association, and with procedures adapted from "Test Methods for Evaluating Solid Waste" SW-846 published by the United States Environmental Protection Agency (EPA). The procedures may involve preliminary sample treatment by acid digestion, using either hotblock or microwave oven, or filtration (EPA Method 3005A). Instrumental analysis is by inductively coupled plasma - optical emission spectrophotometry (EPA Method 6010B).

MET-DIS-CCME-MS-VA Water Diss. Metals in Water by ICPMS (CCME) EPA SW-846 3005A/6020A

This analysis is carried out using procedures adapted from "Standard Methods for the Examination of Water and Wastewater" published by the American Public Health Association, and with procedures adapted from "Test Methods for Evaluating Solid Waste" SW-846 published by the United States Environmental Protection Agency (EPA). The procedures may involve preliminary sample treatment by acid digestion, using either hotblock or microwave oven, or filtration (EPA Method 3005A). Instrumental analysis is by inductively coupled plasma - mass spectrometry (EPA Method 6020A).

MET-TOT-CCME-ICP-VA Water Total Metals in Water by ICPOES (CCME) EPA SW-846 3005A/6010B

This analysis is carried out using procedures adapted from "Standard Methods for the Examination of Water and Wastewater" published by the American Public Health Association, and with procedures adapted from "Test Methods for Evaluating Solid Waste" SW-846 published by the United States Environmental Protection Agency (EPA). The procedures may involve preliminary sample treatment by acid digestion, using either hotblock or microwave oven, or filtration (EPA Method 3005A). Instrumental analysis is by inductively coupled plasma - optical emission spectrophotometry (EPA Method 6010B).

MET-TOT-CCME-MS-VA Water Total Metals in Water by ICPMS (CCME) EPA SW-846 3005A/6020A

This analysis is carried out using procedures adapted from "Standard Methods for the Examination of Water and Wastewater" published by the American Public Health Association, and with procedures adapted from "Test Methods for Evaluating Solid Waste" SW-846 published by the United States Environmental Protection Agency (EPA). The procedures may involve preliminary sample treatment by acid digestion, using either hotblock or microwave oven, or filtration (EPA Method 3005A). Instrumental analysis is by inductively coupled plasma - mass spectrometry (EPA Method 6020A).

NH3-SIE-VA Water Ammonia by SIE APHA 4500 D. - NH3 NITROGEN (AMMONIA)

This analysis is carried out, on sulphuric acid preserved samples, using procedures adapted from APHA Method 4500-NH3 "Nitrogen (Ammonia)". Ammonia is determined using an ammonia selective electrode.

Reference Information

Methods Listed (if applicable):

ALS Test Code	Matrix	Test Description	Analytical Method Reference(Based On)
PH-PCT-VA	Water	pH by Meter (Automated)	APHA 4500-H "pH Value"

This analysis is carried out using procedures adapted from APHA Method 4500-H "pH Value". The pH is determined in the laboratory using a pH electrode

PH-PCT-VA	Water	pH by Meter (Automated)	APHA 4500-H pH Value

This analysis is carried out using procedures adapted from APHA Method 4500-H "pH Value". The pH is determined in the laboratory using a pH electrode

PO4-DO-COL-VA	Water	Dissolved ortho Phosphate by Colour	APHA 4500-P "Phosphorous"

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". All forms of phosphate are determined by the ascorbic acid colourimetric method. Dissolved ortho-phosphate (dissolved reactive phosphorous) is determined by direct measurement. Total phosphate (total phosphorous) is determined after persulphate digestion of a sample. Total dissolved phosphate (total dissolved phosphorous) is determined by filtering a sample through a 0.45 micron membrane filter followed by persulfate digestion of the filtrate.

PO4-DO-COL-VA	Water	Dissolved ortho Phosphate by Colour	APHA 4500-P Phosphorous

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". All forms of phosphate are determined by the ascorbic acid colourimetric method. Dissolved ortho-phosphate (dissolved reactive phosphorous) is determined by direct measurement. Total phosphate (total phosphorous) is determined after persulphate digestion of a sample. Total dissolved phosphate (total dissolved phosphorous) is determined by filtering a sample through a 0.45 micron membrane filter followed by persulfate digestion of the filtrate.

PO4-T-COL-VA	Water	Total Phosphate P by Color	APHA 4500-P "Phosphorous"

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". All forms of phosphate are determined by the ascorbic acid colourimetric method. Dissolved ortho-phosphate (dissolved reactive phosphorous) is determined by direct measurement. Total phosphate (total phosphorous) is determined after persulphate digestion of a sample. Total dissolved phosphate (total dissolved phosphorous) is determined by filtering a sample through a 0.45 micron membrane filter followed by persulfate digestion of the filtrate.

PO4-T-COL-VA	Water	Total Phosphate P by Color	APHA 4500-P Phosphorous

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". All forms of phosphate are determined by the ascorbic acid colourimetric method. Dissolved ortho-phosphate (dissolved reactive phosphorous) is determined by direct measurement. Total phosphate (total phosphorous) is determined after persulphate digestion of a sample. Total dissolved phosphate (total dissolved phosphorous) is determined by filtering a sample through a 0.45 micron membrane filter followed by persulfate digestion of the filtrate.

PO4-TD-COL-VA	Water	Total Dissolved Phosphate by Colour	APHA 4500-P Phosphorous

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". All forms of phosphate are determined by the ascorbic acid colourimetric method. Dissolved ortho-phosphate (dissolved reactive phosphorous) is determined by direct measurement. Total phosphate (total phosphorous) is determined after persulphate digestion of a sample. Total dissolved phosphate (total dissolved phosphorous) is determined by filtering a sample through a 0.45 micron membrane filter followed by persulfate digestion of the filtrate.

PO4-TD-COL-VA	Water	Total Dissolved Phosphate by Colour	APHA 4500-P " Phosphorous"

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". All forms of phosphate are determined by the ascorbic acid colourimetric method. Dissolved ortho-phosphate (dissolved reactive phosphorous) is determined by direct measurement. Total phosphate (total phosphorous) is determined after persulphate digestion of a sample. Total dissolved phosphate (total dissolved phosphorous) is determined by filtering a sample through a 0.45 micron membrane filter followed by persulfate digestion of the filtrate.

TDS-CALC-VA	Water	TDS (Calculation from EC)	APHA 1030E (20TH EDITION)

This analysis is carried out using procedures adapted from APHA 1030E "Checking Correctness of Analyses".

TKN-SIE-VA	Water	Total Kjeldahl Nitrogen by SIE	APHA 4500-Norg (TKN)

This analysis is carried out using procedures adapted from APHA Method 4500-Norg "Nitrogen (Organic)". Total kjeldahl nitrogen is determined by sample digestion at 367 celcius with analysis using an ammonia selective electrode.

TN-CALC-VA	Water	TN by Calc (TKN + N+N)	BC MOE LABORATORY MANUAL (2005)

Reference Information

Methods Listed (if applicable):

ALS Test Code	Matrix	Test Description	Analytical Method Reference(Based On)

Total Nitrogen is determined by calculation by suming TKN and the NO2 and NO3 results.

TSS-VA	Water	Total Suspended Solids by Gravimetric	APHA 2540 D - GRAVIMETRIC

This analysis is carried out using procedures adapted from APHA Method 2540 "Solids". Solids are determined gravimetrically. Total Suspended Solids (TSS) are determined by filtering a sample through a glass fibre filter, TSS is determined by drying the filter at 104 degrees celsius.

TURBIDITY-VA	Water	Turbidity by Meter	APHA 2130 "Turbidity"

This analysis is carried out using procedures adapted from APHA Method 2130 "Turbidity". Turbidity is determined by the nephelometric method.

TURBIDITY-VA	Water	Turbidity by Meter	APHA 2130 Turbidity

This analysis is carried out using procedures adapted from APHA Method 2130 "Turbidity". Turbidity is determined by the nephelometric method.

** Laboratory Methods employed follow in-house procedures, which are generally based on nationally or internationally accepted methodologies.
The last two letters of the above ALS Test Code column indicate the laboratory that performed analytical analysis for that test. Refer to the list below:

Laboratory Definition Code	Laboratory Location	Laboratory Definition Code	Laboratory Location
VA	ALS LABORATORY GROUP - VANCOUVER, BC, CANADA		

GLOSSARY OF REPORT TERMS
Surr - A surrogate is an organic compound that is similar to the target analyte(s) in chemical composition and behavior but not normally detected in enviromental samples. Prior to sample processing, samples are fortified with one or more surrogate compounds.
The reported surrogate recovery value provides a measure of method efficiency.
mg/kg (units) - unit of concentration based on mass, parts per million
mg/L (units) - unit of concentration based on volume, parts per million
N/A - Result not available. Refer to qualifier code and definition for explanation

Test results reported relate only to the samples as received by the laboratory.
UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.
Although test results are generated under strict QA/QC protocols, any unsigned test reports, faxes, or emails are considered preliminary.

ALS Laboratory Group has an extensive QA/QC program where all analytical data reported is analyzed using approved referenced procedures followed by checks and reviews by senior managers and quality assurance personnel. However, since the results are obtained from chemical measurements and thus cannot be guaranteed, ALS Laboratory Group assumes no liability for the use or interpretation of the results.

Reference Information

Additional Comments for Sample Listed:

Samplenum	Matrix	Report Remarks	Sample Comments

Methods Listed (if applicable):

ALS Test Code	Matrix	Test Description	Analytical Method Reference(Based On)
ALK-PCT-VA	Water	Alkalinity by Auto. Titration	APHA 2320 "Alkalinity"

This analysis is carried out using procedures adapted from APHA Method 2320 "Alkalinity". Total alkalinity is determined by potentiometric titration to a pH 4.5 endpoint. Bicarbonate, carbonate and hydroxide alkalinity are calculated from phenolphthalein alkalinity and total alkalinity values.

ALK-PCT-VA	Water	Alkalinity by Auto. Titration	APHA 2320 Alkalinity

This analysis is carried out using procedures adapted from APHA Method 2320 "Alkalinity". Total alkalinity is determined by potentiometric titration to a pH 4.5 endpoint. Bicarbonate, carbonate and hydroxide alkalinity are calculated from phenolphthalein alkalinity and total alkalinity values.

ANIONS-BR-IC-VA	Water	Bromide by Ion Chromatography	APHA 4110 B.

This analysis is carried out using procedures adapted from APHA Method 4110 B. "Ion Chromatography with Chemical Suppression of Eluent Conductivity" and EPA Method 300.0 "Determination of Inorganic Anions by Ion Chromatography".

ANIONS-CL-IC-VA	Water	Chloride by Ion Chromatography	APHA 4110 B.

This analysis is carried out using procedures adapted from APHA Method 4110 B. "Ion Chromatography with Chemical Suppression of Eluent Conductivity" and EPA Method 300.0 "Determination of Inorganic Anions by Ion Chromatography".

ANIONS-F-IC-VA	Water	Fluoride by Ion Chromatography	APHA 4110 B.

This analysis is carried out using procedures adapted from APHA Method 4110 B. "Ion Chromatography with Chemical Suppression of Eluent Conductivity" and EPA Method 300.0 "Determination of Inorganic Anions by Ion Chromatography".

ANIONS-NO2-IC-VA	Water	Nitrite by Ion Chromatography	APHA 4110 B.

This analysis is carried out using procedures adapted from APHA Method 4110 B. "Ion Chromatography with Chemical Suppression of Eluent Conductivity" and EPA Method 300.0 "Determination of Inorganic Anions by Ion Chromatography". Specifically, the nitrite detection is by UV absorbance and not conductivity.

ANIONS-NO3-IC-VA	Water	Nitrate by Ion Chromatography	APHA 4110 B.

This analysis is carried out using procedures adapted from APHA Method 4110 B. "Ion Chromatography with Chemical Suppression of Eluent Conductivity" and EPA Method 300.0 "Determination of Inorganic Anions by Ion Chromatography". Specifically, the nitrate detection is by UV absorance and not conductivity.

ANIONS-SO4-IC-VA	Water	Sulfate by Ion Chromatography	APHA 4110 B.

This analysis is carried out using procedures adapted from APHA Method 4110 B. "Ion Chromatography with Chemical Suppression of Eluent Conductivity" and EPA Method 300.0 "Determination of Inorganic Anions by Ion Chromatography".

CARBONS-DOC-VA	Water	Dissolved organic carbon by combustion	APHA 5310 "TOTAL ORGANIC CARBON (TOC)"

This analysis is carried out using procedures adapted from APHA Method 5310 "Total Organic Carbon (TOC)". Dissolved carbon (DOC) fractions are determined by filtering the sample through a 0.45 micron membrane filter prior to analysis.

CARBONS-DOC-VA	Water	Dissolved organic carbon by combustion	APHA 5310 TOTAL ORGANIC CARBON (TOC)

This analysis is carried out using procedures adapted from APHA Method 5310 "Total Organic Carbon (TOC)". Dissolved carbon (DOC) fractions are determined by filtering the sample through a 0.45 micron membrane filter prior to analysis.

EC-PCT-VA	Water	Conductivity (Automated)	APHA 2510 Auto. Conduc.

This analysis is carried out using procedures adapted from APHA Method 2510 "Conductivity". Conductivity is determined using a conductivity electrode.

HARDNESS-CALC-VA	Water	Hardness	APHA 2340B

Reference Information

Methods Listed (if applicable):

ALS Test Code	Matrix	Test Description	Analytical Method Reference(Based On)

Hardness is calculated from Calcium and Magnesium concentrations, and is expressed as calcium carbonate equivalents.

HG-DIS-CCME-CVAFS-VA Water Diss. Mercury in Water by CVAFS (CCME) EPA 3005A/245.7

This analysis is carried out using procedures adapted from "Standard Methods for the Examination of Water and Wastewater" published by the American Public Health Association, and with procedures adapted from "Test Methods for Evaluating Solid Waste" SW-846 published by the United States Environmental Protection Agency (EPA). The procedures may involve preliminary sample treatment by filtration (EPA Method 3005A) and involves a cold-oxidation of the acidified sample using bromine monochloride prior to reduction of the sample with stannous chloride. Instrumental analysis is by cold vapour atomic fluorescence spectrophotometry (EPA Method 245.7).

HG-TOT-CCME-CVAFS-VA Water Total Mercury in Water by CVAFS (CCME) EPA 245.7

This analysis is carried out using procedures adapted from "Standard Methods for the Examination of Water and Wastewater" published by the American Public Health Association, and with procedures adapted from "Test Methods for Evaluating Solid Waste" SW-846 published by the United States Environmental Protection Agency (EPA). The procedure involves a cold-oxidation of the acidified sample using bromine monochloride prior to reduction of the sample with stannous chloride. Instrumental analysis is by cold vapour atomic fluorescence spectrophotometry (EPA Method 245.7).

IONBALANCE-VA Water Ion Balance Calculation APHA 1030E

Cation Sum, Anion Sum, and Ion Balance (as % difference) are calculated based on guidance from APHA Standard Methods (1030E Checking Correctness of Analysis). Because all aqueous solutions are electrically neutral, the calculated ion balance (% difference of cations minus anions) should be near-zero.

Cation and Anion Sums are the total meq/L concentration of major cations and anions. Dissolved species are used where available. Minor ions are included where data is present. Ion Balance is calculated as:

Ion Balance (%) = [Cation Sum-Anion Sum] / [Cation Sum+Anion Sum]

MET-DIS-CCME-ICP-VA Water Diss. Metals in Water by ICPOES (CCME) EPA SW-846 3005A/6010B

This analysis is carried out using procedures adapted from "Standard Methods for the Examination of Water and Wastewater" published by the American Public Health Association, and with procedures adapted from "Test Methods for Evaluating Solid Waste" SW-846 published by the United States Environmental Protection Agency (EPA). The procedures may involve preliminary sample treatment by acid digestion, using either hotblock or microwave oven, or filtration (EPA Method 3005A). Instrumental analysis is by inductively coupled plasma - optical emission spectrophotometry (EPA Method 6010B).

MET-DIS-CCME-MS-VA Water Diss. Metals in Water by ICPMS (CCME) EPA SW-846 3005A/6020A

This analysis is carried out using procedures adapted from "Standard Methods for the Examination of Water and Wastewater" published by the American Public Health Association, and with procedures adapted from "Test Methods for Evaluating Solid Waste" SW-846 published by the United States Environmental Protection Agency (EPA). The procedures may involve preliminary sample treatment by acid digestion, using either hotblock or microwave oven, or filtration (EPA Method 3005A). Instrumental analysis is by inductively coupled plasma - mass spectrometry (EPA Method 6020A).

MET-TOT-CCME-ICP-VA Water Total Metals in Water by ICPOES (CCME) EPA SW-846 3005A/6010B

This analysis is carried out using procedures adapted from "Standard Methods for the Examination of Water and Wastewater" published by the American Public Health Association, and with procedures adapted from "Test Methods for Evaluating Solid Waste" SW-846 published by the United States Environmental Protection Agency (EPA). The procedures may involve preliminary sample treatment by acid digestion, using either hotblock or microwave oven, or filtration (EPA Method 3005A). Instrumental analysis is by inductively coupled plasma - optical emission spectrophotometry (EPA Method 6010B).

MET-TOT-CCME-MS-VA Water Total Metals in Water by ICPMS (CCME) EPA SW-846 3005A/6020A

This analysis is carried out using procedures adapted from "Standard Methods for the Examination of Water and Wastewater" published by the American Public Health Association, and with procedures adapted from "Test Methods for Evaluating Solid Waste" SW-846 published by the United States Environmental Protection Agency (EPA). The procedures may involve preliminary sample treatment by acid digestion, using either hotblock or microwave oven, or filtration (EPA Method 3005A). Instrumental analysis is by inductively coupled plasma - mass spectrometry (EPA Method 6020A).

NH3-SIE-VA Water Ammonia by SIE APHA 4500 D. - NH3 NITROGEN (AMMONIA)

This analysis is carried out, on sulphuric acid preserved samples, using procedures adapted from APHA Method 4500-NH3 "Nitrogen (Ammonia)". Ammonia is determined using an ammonia selective electrode.

Reference Information

Methods Listed (if applicable):

ALS Test Code	Matrix	Test Description	Analytical Method Reference(Based On)
PH-PCT-VA	Water	pH by Meter (Automated)	APHA 4500-H "pH Value"

This analysis is carried out using procedures adapted from APHA Method 4500-H "pH Value". The pH is determined in the laboratory using a pH electrode

PH-PCT-VA	Water	pH by Meter (Automated)	APHA 4500-H pH Value

This analysis is carried out using procedures adapted from APHA Method 4500-H "pH Value". The pH is determined in the laboratory using a pH electrode

PO4-DO-COL-VA	Water	Dissolved ortho Phosphate by Colour	APHA 4500-P "Phosphorous"

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". All forms of phosphate are determined by the ascorbic acid colourimetric method. Dissolved ortho-phosphate (dissolved reactive phosphorous) is determined by direct measurement. Total phosphate (total phosphorous) is determined after persulphate digestion of a sample. Total dissolved phosphate (total dissolved phosphorous) is determined by filtering a sample through a 0.45 micron membrane filter followed by persulfate digestion of the filtrate.

PO4-DO-COL-VA	Water	Dissolved ortho Phosphate by Colour	APHA 4500-P Phosphorous

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". All forms of phosphate are determined by the ascorbic acid colourimetric method. Dissolved ortho-phosphate (dissolved reactive phosphorous) is determined by direct measurement. Total phosphate (total phosphorous) is determined after persulphate digestion of a sample. Total dissolved phosphate (total dissolved phosphorous) is determined by filtering a sample through a 0.45 micron membrane filter followed by persulfate digestion of the filtrate.

PO4-T-COL-VA	Water	Total Phosphate P by Color	APHA 4500-P "Phosphorous"

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". All forms of phosphate are determined by the ascorbic acid colourimetric method. Dissolved ortho-phosphate (dissolved reactive phosphorous) is determined by direct measurement. Total phosphate (total phosphorous) is determined after persulphate digestion of a sample. Total dissolved phosphate (total dissolved phosphorous) is determined by filtering a sample through a 0.45 micron membrane filter followed by persulfate digestion of the filtrate.

PO4-T-COL-VA	Water	Total Phosphate P by Color	APHA 4500-P Phosphorous

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". All forms of phosphate are determined by the ascorbic acid colourimetric method. Dissolved ortho-phosphate (dissolved reactive phosphorous) is determined by direct measurement. Total phosphate (total phosphorous) is determined after persulphate digestion of a sample. Total dissolved phosphate (total dissolved phosphorous) is determined by filtering a sample through a 0.45 micron membrane filter followed by persulfate digestion of the filtrate.

PO4-TD-COL-VA	Water	Total Dissolved Phosphate by Colour	APHA 4500-P Phosphorous

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". All forms of phosphate are determined by the ascorbic acid colourimetric method. Dissolved ortho-phosphate (dissolved reactive phosphorous) is determined by direct measurement. Total phosphate (total phosphorous) is determined after persulphate digestion of a sample. Total dissolved phosphate (total dissolved phosphorous) is determined by filtering a sample through a 0.45 micron membrane filter followed by persulfate digestion of the filtrate.

PO4-TD-COL-VA	Water	Total Dissolved Phosphate by Colour	APHA 4500-P " Phosphorous"

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". All forms of phosphate are determined by the ascorbic acid colourimetric method. Dissolved ortho-phosphate (dissolved reactive phosphorous) is determined by direct measurement. Total phosphate (total phosphorous) is determined after persulphate digestion of a sample. Total dissolved phosphate (total dissolved phosphorous) is determined by filtering a sample through a 0.45 micron membrane filter followed by persulfate digestion of the filtrate.

TDS-CALC-VA	Water	TDS (Calculation from EC)	APHA 1030E (20TH EDITION)

This analysis is carried out using procedures adapted from APHA 1030E "Checking Correctness of Analyses".

TKN-SIE-VA	Water	Total Kjeldahl Nitrogen by SIE	APHA 4500-Norg (TKN)

This analysis is carried out using procedures adapted from APHA Method 4500-Norg "Nitrogen (Organic)". Total kjeldahl nitrogen is determined by sample digestion at 367 celcius with analysis using an ammonia selective electrode.

TN-CALC-VA	Water	TN by Calc (TKN + N+N)	BC MOE LABORATORY MANUAL (2005)

Reference Information

Methods Listed (if applicable):

ALS Test Code	Matrix	Test Description	Analytical Method Reference(Based On)
		Total Nitrogen is determined by calculation by suming TKN and the NO2 and NO3 results.	
TSS-VA	Water	Total Suspended Solids by Gravimetric	APHA 2540 D - GRAVIMETRIC
		This analysis is carried out using procedures adapted from APHA Method 2540 "Solids". Solids are determined gravimetrically. Total Suspended Solids (TSS) are determined by filtering a sample through a glass fibre filter, TSS is determined by drying the filter at 104 degrees celsius.	
TURBIDITY-VA	Water	Turbidity by Meter	APHA 2130 "Turbidity"
		This analysis is carried out using procedures adapted from APHA Method 2130 "Turbidity". Turbidity is determined by the nephelometric method.	
TURBIDITY-VA	Water	Turbidity by Meter	APHA 2130 Turbidity
		This analysis is carried out using procedures adapted from APHA Method 2130 "Turbidity". Turbidity is determined by the nephelometric method.	

** Laboratory Methods employed follow in-house procedures, which are generally based on nationally or internationally accepted methodologies.
The last two letters of the above ALS Test Code column indicate the laboratory that performed analytical analysis for that test. Refer to the list below:

Laboratory Definition Code	Laboratory Location	Laboratory Definition Code	Laboratory Location
VA	ALS LABORATORY GROUP - VANCOUVER, BC, CANADA		

GLOSSARY OF REPORT TERMS
Surr - A surrogate is an organic compound that is similar to the target analyte(s) in chemical composition and behavior but not normally detected in enviromental samples. Prior to sample processing, samples are fortified with one or more surrogate compounds.
The reported surrogate recovery value provides a measure of method efficiency.
mg/kg (units) - unit of concentration based on mass, parts per million
mg/L (units) - unit of concentration based on volume, parts per million
N/A - Result not available. Refer to qualifier code and definition for explanation

Test results reported relate only to the samples as received by the laboratory.
UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.
Although test results are generated under strict QA/QC protocols, any unsigned test reports, faxes, or emails are considered preliminary.

ALS Laboratory Group has an extensive QA/QC program where all analytical data reported is analyzed using approved referenced procedures followed by checks and reviews by senior managers and quality assurance personnel. Reference Information

Additional Comments for Sample Listed:

Samplenum	Matrix	Report Remarks	Sample Comment

Methods Listed (if applicable):

ALS Test Code	Matrix	Test Description	Method Reference**
ALK-PCT-VA	Water	Alkalinity by Auto. Titration	APHA 2320 "Alkalinity"

This analysis is carried out using procedures adapted from APHA Method 2320 "Alkalinity". Total alkalinity is determined by potentiometric titration to a pH 4.5 endpoint. Bicarbonate, carbonate and hydroxide alkalinity are calculated from phenolphthalein alkalinity and total alkalinity values.

ALK-PCT-VA	Water	Alkalinity by Auto. Titration	APHA 2320 Alkalinity

This analysis is carried out using procedures adapted from APHA Method 2320 "Alkalinity". Total alkalinity is determined by potentiometric titration to a pH 4.5 endpoint. Bicarbonate, carbonate and hydroxide alkalinity are calculated from phenolphthalein alkalinity and total alkalinity values.

ANIONS-BR-IC-VA	Water	Bromide by Ion Chromatography	APHA 4110 B.

This analysis is carried out using procedures adapted from APHA Method 4110 B. "Ion Chromatography with Chemical Suppression of Eluent Conductivity" and EPA Method 300.0 "Determination of Inorganic Anions by Ion Chromatography".

ANIONS-CL-IC-VA	Water	Chloride by Ion Chromatography	APHA 4110 B.

This analysis is carried out using procedures adapted from APHA Method 4110 B. "Ion Chromatography with Chemical Suppression of Eluent Conductivity" and EPA Method 300.0 "Determination of Inorganic Anions by Ion Chromatography".

ANIONS-F-IC-VA	Water	Fluoride by Ion Chromatography	APHA 4110 B.

This analysis is carried out using procedures adapted from APHA Method 4110 B. "Ion Chromatography with Chemical Suppression of Eluent Conductivity" and EPA Method 300.0 "Determination of Inorganic Anions by Ion Chromatography".

ANIONS-NO2-IC-VA	Water	Nitrite by Ion Chromatography	APHA 4110 B.

This analysis is carried out using procedures adapted from APHA Method 4110 B. "Ion Chromatography with Chemical Suppression of Eluent Conductivity" and EPA Method 300.0 "Determination of Inorganic Anions by Ion Chromatography". Specifically, the nitrite detection is by UV absorbance and not conductivity.

ANIONS-NO3-IC-VA	Water	Nitrate by Ion Chromatography	APHA 4110 B.

This analysis is carried out using procedures adapted from APHA Method 4110 B. "Ion Chromatography with Chemical Suppression of Eluent Conductivity" and EPA Method 300.0 "Determination of Inorganic Anions by Ion Chromatography". Specifically, the nitrate detection is by UV absorance and not conductivity.

ANIONS-SO4-IC-VA	Water	Sulfate by Ion Chromatography	APHA 4110 B.

This analysis is carried out using procedures adapted from APHA Method 4110 B. "Ion Chromatography with Chemical Suppression of Eluent Conductivity" and EPA Method 300.0 "Determination of Inorganic Anions by Ion Chromatography".

CARBONS-DOC-VA	Water	Dissolved organic carbon by combustion	APHA 5310 "TOTAL ORGANIC CARBON (TOC)"

This analysis is carried out using procedures adapted from APHA Method 5310 "Total Organic Carbon (TOC)". Dissolved carbon (DOC) fractions are determined by filtering the sample through a 0.45 micron membrane filter prior to analysis.

CARBONS-DOC-VA	Water	Dissolved organic carbon by combustion	APHA 5310 TOTAL ORGANIC CARBON (TOC)

This analysis is carried out using procedures adapted from APHA Method 5310 "Total Organic Carbon (TOC)". Dissolved carbon (DOC) fractions are determined by filtering the sample through a 0.45 micron membrane filter prior to analysis.

EC-PCT-VA	Water	Conductivity (Automated)	APHA 2510 Auto. Conduc.

This analysis is carried out using procedures adapted from APHA Method 2510 "Conductivity". Conductivity is determined using a conductivity electrode.

HARDNESS-CALC-VA	Water	Hardness	APHA 2340B

Hardness is calculated from Calcium and Magnesium concentrations, and is expressed as calcium carbonate equivalents.

HG-DIS-CCME-CVAFS-VA	Water	Diss. Mercury in Water by CVAFS (CCME)	EPA 3005A/245.7

This analysis is carried out using procedures adapted from "Standard Methods for the Examination of Water and Wastewater" published by the American Public Health Association, and with procedures adapted from "Test Methods for Evaluating Solid Waste" SW-846 published by the United States Environmental Protection Agency (EPA). The procedures may involve preliminary sample treatment by filtration (EPA Method 3005A) and involves a cold-oxidation of the acidified sample using bromine monochloride prior to reduction of the sample with stannous chloride. Instrumental analysis is by cold vapour atomic fluorescence spectrophotometry (EPA Method 245.7).

HG-TOT-CCME-CVAFS-VA	Water	Total Mercury in Water by CVAFS (CCME)	EPA 245.7

This analysis is carried out using procedures adapted from "Standard Methods for the Examination of Water and Wastewater" published by the American Public Health Association, and with procedures adapted from "Test Methods for Evaluating Solid Waste" SW-846 published by the United States Environmental Protection Agency (EPA). The procedure involves a cold-oxidation of the acidified sample using bromine monochloride prior to reduction of the sample with stannous chloride. Instrumental analysis is by cold vapour atomic fluorescence spectrophotometry (EPA Method 245.7).

Reference Information

Methods Listed (if applicable):

ALS Test Code	Matrix	Test Description	Method Reference**
IONBALANCE-VA	Water	Ion Balance Calculation	APHA 1030E

Cation Sum, Anion Sum, and Ion Balance (as % difference) are calculated based on guidance from APHA Standard Methods (1030E Checking Correctness of Analysis). Because all aqueous solutions are electrically neutral, the calculated ion balance (% difference of cations minus anions) should be near-zero.

Cation and Anion Sums are the total meq/L concentration of major cations and anions. Dissolved species are used where available. Minor ions are included where data is present. Ion Balance is calculated as:

Ion Balance (%) = [Cation Sum-Anion Sum] / [Cation Sum+Anion Sum]

MET-DIS-CCME-ICP-VA	Water	Diss. Metals in Water by ICPOES (CCME)	EPA SW-846 3005A/6010B

This analysis is carried out using procedures adapted from "Standard Methods for the Examination of Water and Wastewater" published by the American Public Health Association, and with procedures adapted from "Test Methods for Evaluating Solid Waste" SW-846 published by the United States Environmental Protection Agency (EPA). The procedures may involve preliminary sample treatment by acid digestion, using either hotblock or microwave oven, or filtration (EPA Method 3005A). Instrumental analysis is by inductively coupled plasma - optical emission spectrophotometry (EPA Method 6010B).

MET-DIS-CCME-MS-VA	Water	Diss. Metals in Water by ICPMS (CCME)	EPA SW-846 3005A/6020A

This analysis is carried out using procedures adapted from "Standard Methods for the Examination of Water and Wastewater" published by the American Public Health Association, and with procedures adapted from "Test Methods for Evaluating Solid Waste" SW-846 published by the United States Environmental Protection Agency (EPA). The procedures may involve preliminary sample treatment by acid digestion, using either hotblock or microwave oven, or filtration (EPA Method 3005A). Instrumental analysis is by inductively coupled plasma - mass spectrometry (EPA Method 6020A).

MET-TOT-CCME-ICP-VA	Water	Total Metals in Water by ICPOES (CCME)	EPA SW-846 3005A/6010B

This analysis is carried out using procedures adapted from "Standard Methods for the Examination of Water and Wastewater" published by the American Public Health Association, and with procedures adapted from "Test Methods for Evaluating Solid Waste" SW-846 published by the United States Environmental Protection Agency (EPA). The procedures may involve preliminary sample treatment by acid digestion, using either hotblock or microwave oven, or filtration (EPA Method 3005A). Instrumental analysis is by inductively coupled plasma - optical emission spectrophotometry (EPA Method 6010B).

MET-TOT-CCME-MS-VA	Water	Total Metals in Water by ICPMS (CCME)	EPA SW-846 3005A/6020A

This analysis is carried out using procedures adapted from "Standard Methods for the Examination of Water and Wastewater" published by the American Public Health Association, and with procedures adapted from "Test Methods for Evaluating Solid Waste" SW-846 published by the United States Environmental Protection Agency (EPA). The procedures may involve preliminary sample treatment by acid digestion, using either hotblock or microwave oven, or filtration (EPA Method 3005A). Instrumental analysis is by inductively coupled plasma - mass spectrometry (EPA Method 6020A).

NH3-SIE-VA	Water	Ammonia by SIE	APHA 4500 D. - NH3 NITROGEN (AMMONIA)

This analysis is carried out, on sulphuric acid preserved samples, using procedures adapted from APHA Method 4500-NH3 "Nitrogen (Ammonia)". Ammonia is determined using an ammonia selective electrode.

PH-PCT-VA	Water	pH by Meter (Automated)	APHA 4500-H "pH Value"

This analysis is carried out using procedures adapted from APHA Method 4500-H "pH Value". The pH is determined in the laboratory using a pH electrode

PH-PCT-VA	Water	pH by Meter (Automated)	APHA 4500-H pH Value

This analysis is carried out using procedures adapted from APHA Method 4500-H "pH Value". The pH is determined in the laboratory using a pH electrode

PO4-DO-COL-VA	Water	Dissolved ortho Phosphate by Colour	APHA 4500-P "Phosphorous"

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". All forms of phosphate are determined by the ascorbic acid colourimetric method. Dissolved ortho-phosphate (dissolved reactive phosphorous) is determined by direct measurement. Total phosphate (total phosphorous) is determined after persulphate digestion of a sample. Total dissolved phosphate (total dissolved phosphorous) is determined by filtering a sample through a 0.45 micron membrane filter followed by persulfate digestion of the filtrate.

PO4-DO-COL-VA	Water	Dissolved ortho Phosphate by Colour	APHA 4500-P Phosphorous

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". All forms of phosphate are determined by the ascorbic acid colourimetric method. Dissolved ortho-phosphate (dissolved reactive phosphorous) is determined by direct measurement. Total phosphate (total phosphorous) is determined after persulphate digestion of a sample. Total dissolved phosphate (total dissolved phosphorous) is determined by filtering a sample through a 0.45 micron membrane filter followed by persulfate digestion of the filtrate.

PO4-T-COL-VA	Water	Total Phosphate P by Color	APHA 4500-P "Phosphorous"

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". All forms of phosphate are determined by the ascorbic acid colourimetric method. Dissolved ortho-phosphate (dissolved reactive phosphorous) is determined by direct measurement. Total phosphate (total phosphorous) is determined after persulphate digestion of a sample. Total dissolved phosphate (total dissolved phosphorous) is determined by filtering a sample through a 0.45 micron membrane filter followed by persulfate digestion of the filtrate.

PO4-T-COL-VA	Water	Total Phosphate P by Color	APHA 4500-P Phosphorous

Reference Information

Methods Listed (if applicable):

ALS Test Code	Matrix	Test Description	Method Reference**

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". All forms of phosphate are determined by the ascorbic acid colourimetric method. Dissolved ortho-phosphate (dissolved reactive phosphorous) is determined by direct measurement. Total phosphate (total phosphorous) is determined after persulphate digestion of a sample. Total dissolved phosphate (total dissolved phosphorous) is determined by filtering a sample through a 0.45 micron membrane filter followed by persulfate digestion of the filtrate.

PO4-TD-COL-VA	Water	Total Dissolved Phosphate by Colour	APHA 4500-P Phosphorous

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". All forms of phosphate are determined by the ascorbic acid colourimetric method. Dissolved ortho-phosphate (dissolved reactive phosphorous) is determined by direct measurement. Total phosphate (total phosphorous) is determined after persulphate digestion of a sample. Total dissolved phosphate (total dissolved phosphorous) is determined by filtering a sample through a 0.45 micron membrane filter followed by persulfate digestion of the filtrate.

PO4-TD-COL-VA	Water	Total Dissolved Phosphate by Colour	APHA 4500-P " Phosphorous"

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". All forms of phosphate are determined by the ascorbic acid colourimetric method. Dissolved ortho-phosphate (dissolved reactive phosphorous) is determined by direct measurement. Total phosphate (total phosphorous) is determined after persulphate digestion of a sample. Total dissolved phosphate (total dissolved phosphorous) is determined by filtering a sample through a 0.45 micron membrane filter followed by persulfate digestion of the filtrate.

TDS-CALC-VA	Water	TDS (Calculation from EC)	APHA 1030E (20TH EDITION)

This analysis is carried out using procedures adapted from APHA 1030E "Checking Correctness of Analyses".

TKN-COL-VA	Water	Total Kjeldahl Nitrogen by Auto. Colour	APHA 4500-Norg (TKN)

This analysis is carried out using procedures adapted from APHA Method 4500-Norg "Nitrogen (Organic)". Total kjeldahl nitrogen is determined by sample digestion at 380 celcius with analysis using an automated colourimetric finish.

TN-CALC-VA	Water	TN by Calc (TKN + N+N)	BC MOE LABORATORY MANUAL (2005)

Total Nitrogen is determined by calculation by suming TKN and the NO2 and NO3 results.

TSS-VA	Water	Total Suspended Solids by Gravimetric	APHA 2540 D - GRAVIMETRIC

This analysis is carried out using procedures adapted from APHA Method 2540 "Solids". Solids are determined gravimetrically. Total Suspended Solids (TSS) are determined by filtering a sample through a glass fibre filter, TSS is determined by drying the filter at 104 degrees celsius.

TURBIDITY-VA	Water	Turbidity by Meter	APHA 2130 "Turbidity"

This analysis is carried out using procedures adapted from APHA Method 2130 "Turbidity". Turbidity is determined by the nephelometric method.

TURBIDITY-VA	Water	Turbidity by Meter	APHA 2130 Turbidity

This analysis is carried out using procedures adapted from APHA Method 2130 "Turbidity". Turbidity is determined by the nephelometric method.

**ALS test methods may incorporate modifications from specified reference methods to improve performance.

Chain of Custody numbers:

09-027887

The last two letters of the above test code(s) indicate the laboratory that performed analytical analysis for that test. Refer to the list below:

Laboratory Definition Code	Laboratory Location
VA	ALS LABORATORY GROUP - VANCOUVER, BC, CANADA

GLOSSARY OF REPORT TERMS

Surrogates are compounds that are similar in behaviour to target analyte(s), but that do not normally occur in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery. In reports that display the D.L. column, laboratory objectives for surrogates are listed there.
mg/kg - milligrams per kilogram based on dry weight of sample
mk/kg wwt - milligrams per kilogram based on wet weight of sample
mg/kg lwt - milligrams per kilogram based on lipid-adjusted weight
mg/L - unit of concentration based on volume, parts per million.
< - Less than.
D.L. - The reporting limit.
N/A - Result not available. Refer to qualifier code and definition for explanation.

Test results reported relate only to the samples as received by the laboratory.
UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.
Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.

Additional Comments for Sample Listed:

Samplenum	Matrix	Report Remarks	Sample Comments

Methods Listed (if applicable):

ALS Test Code	Matrix	Test Description	Analytical Method Reference(Based On)
ALK-COL-VA	Water	Alkalinity by Colourimetric (Automated)	APHA 310.2

This analysis is carried out using procedures adapted from EPA Method 310.2 "Alkalinity". Total Alkalinity is determined using the methyl orange colourimetric method.

ANIONS-BR-IC-VA	Water	Bromide by Ion Chromatography	APHA 4110 B.

This analysis is carried out using procedures adapted from APHA Method 4110 B. "Ion Chromatography with Chemical Suppression of Eluent Conductivity" and EPA Method 300.0 "Determination of Inorganic Anions by Ion Chromatography".

ANIONS-CL-IC-VA	Water	Chloride by Ion Chromatography	APHA 4110 B.

This analysis is carried out using procedures adapted from APHA Method 4110 B. "Ion Chromatography with Chemical Suppression of Eluent Conductivity" and EPA Method 300.0 "Determination of Inorganic Anions by Ion Chromatography".

ANIONS-F-IC-VA	Water	Fluoride by Ion Chromatography	APHA 4110 B.

This analysis is carried out using procedures adapted from APHA Method 4110 B. "Ion Chromatography with Chemical Suppression of Eluent Conductivity" and EPA Method 300.0 "Determination of Inorganic Anions by Ion Chromatography".

ANIONS-NO2-IC-VA	Water	Nitrite by Ion Chromatography	APHA 4110 B.

This analysis is carried out using procedures adapted from APHA Method 4110 B. "Ion Chromatography with Chemical Suppression of Eluent Conductivity" and EPA Method 300.0 "Determination of Inorganic Anions by Ion Chromatography". Specifically, the nitrite detection is by UV absorbance and not conductivity.

ANIONS-NO3-IC-VA	Water	Nitrate by Ion Chromatography	APHA 4110 B.

This analysis is carried out using procedures adapted from APHA Method 4110 B. "Ion Chromatography with Chemical Suppression of Eluent Conductivity" and EPA Method 300.0 "Determination of Inorganic Anions by Ion Chromatography". Specifically, the nitrate detection is by UV absorance and not conductivity.

ANIONS-SO4-IC-VA	Water	Sulfate by Ion Chromatography	APHA 4110 B.

This analysis is carried out using procedures adapted from APHA Method 4110 B. "Ion Chromatography with Chemical Suppression of Eluent Conductivity" and EPA Method 300.0 "Determination of Inorganic Anions by Ion Chromatography".

COLOUR-TRUE-VA	Water	Colour (True) by Spectrometer	APHA 2120 "Color"

This analysis is carried out using procedures adapted from APHA Method 2120 "Color". Colour (True Colour) is determined by filtering a sample through a 0.45 micron membrane filter followed by analysis of the filtrate using the platinum-cobalt colourimetric method. Aparent Colour is determined without prior sample filtration. Colour is pH dependent. Unless otherwise indicated, reported colour results pertain to the pH of the sample as received, to within +/- 1 pH unit.

COLOUR-TRUE-VA	Water	Colour (True) by Spectrometer	APHA 2120 Color

This analysis is carried out using procedures adapted from APHA Method 2120 "Color". Colour (True Colour) is determined by filtering a sample through a 0.45 micron membrane filter followed by analysis of the filtrate using the platinum-cobalt colourimetric method. Aparent Colour is determined without prior sample filtration. Colour is pH dependent. Unless otherwise indicated, reported colour results pertain to the pH of the sample as received, to within +/- 1 pH unit.

EC-PCT-VA	Water	Conductivity (Automated)	APHA 2510 Auto. Conduc.

This analysis is carried out using procedures adapted from APHA Method 2510 "Conductivity". Conductivity is determined using a conductivity electrode.

HARDNESS-CALC-VA	Water	Hardness	APHA 2340B

Hardness is calculated from Calcium and Magnesium concentrations, and is expressed as calcium carbonate equivalents.

ALS Test Code	Matrix	Test Description	Analytical Method Reference(Based On)
HG-DIS-CVAFS-VA	Water	Dissolved Mercury in Water by CVAFS	EPA SW-846 3005A & EPA 245.7

This analysis is carried out using procedures adapted from "Standard Methods for the Examination of Water and Wastewater" published by the American Public Health Association, and with procedures adapted from "Test Methods for Evaluating Solid Waste" SW-846 published by the United States Environmental Protection Agency (EPA). The procedures may involve preliminary sample treatment by filtration (EPA Method 3005A) and involves a cold-oxidation of the acidified sample using bromine monochloride prior to reduction of the sample with stannous chloride. Instrumental analysis is by cold vapour atomic fluorescence spectrophotometry (EPA Method 245.7).

HG-TOT-CVAFS-VA	Water	Total Mercury in Water by CVAFS	EPA 245.7

This analysis is carried out using procedures adapted from "Standard Methods for the Examination of Water and Wastewater" published by the American Public Health Association, and with procedures adapted from "Test Methods for Evaluating Solid Waste" SW-846 published by the United States Environmental Protection Agency (EPA). The procedure involves a cold-oxidation of the acidified sample using bromine monochloride prior to reduction of the sample with stannous chloride. Instrumental analysis is by cold vapour atomic fluorescence spectrophotometry (EPA Method 245.7).

MET-DIS-ICP-VA	Water	Dissolved Metals in Water by ICPOES	EPA SW-846 3005A/6010B

This analysis is carried out using procedures adapted from "Standard Methods for the Examination of Water and Wastewater" published by the American Public Health Association, and with procedures adapted from "Test Methods for Evaluating Solid Waste" SW-846 published by the United States Environmental Protection Agency (EPA). The procedure involves filtration (EPA Method 3005A) and analysis by inductively coupled plasma - optical emission spectrophotometry (EPA Method 6010B).

MET-DIS-LOW-MS-VA	Water	Dissolved Metals in Water by ICPMS(Low)	EPA SW-846 3005A/6020A

This analysis is carried out using procedures adapted from "Standard Methods for the Examination of Water and Wastewater" published by the American Public Health Association, and with procedures adapted from "Test Methods for Evaluating Solid Waste" SW-846 published by the United States Environmental Protection Agency (EPA). The procedures involves preliminary sample treatment by filtration (EPA Method 3005A). Instrumental analysis is by inductively coupled plasma - mass spectrometry (EPA Method 6020A).

MET-TOT-ICP-VA	Water	Total Metals in Water by ICPOES	EPA SW-846 3005A/6010B

This analysis is carried out using procedures adapted from "Standard Methods for the Examination of Water and Wastewater" published by the American Public Health Association, and with procedures adapted from "Test Methods for Evaluating Solid Waste" SW-846 published by the United States Environmental Protection Agency (EPA). The procedures may involve preliminary sample treatment by acid digestion, using either hotblock or microwave oven (EPA Method 3005A). Instrumental analysis is by inductively coupled plasma - optical emission spectrophotometry (EPA Method 6010B).

MET-TOT-LOW-MS-VA	Water	Total Metals in Water by ICPMS(Low)	EPA SW-846 3005A/6020A

This analysis is carried out using procedures adapted from "Standard Methods for the Examination of Water and Wastewater" published by the American Public Health Association, and with procedures adapted from "Test Methods for Evaluating Solid Waste" SW-846 published by the United States Environmental Protection Agency (EPA). The procedures may involve preliminary sample treatment by acid digestion, using either hotblock or microwave oven, or filtration (EPA Method 3005A). Instrumental analysis is by inductively coupled plasma - mass spectrometry (EPA Method 6020A).

N-ORGANIC-CALC-VA	Water	TON by Calc (TKN - NH3)	BC MOE LABORATORY MANUAL (2005)
NH3-COL-VA	Water	Ammonia by Colour	APHA 4500-NH3 "Nitrogen (Ammonia)"

This analysis is carried out, on unpreserved samples, using procedures adapted from APHA Method 4500-NH3 "Nitrogen (Ammonia)". Ammonia is determined using the phenate colourimetric method.

NH3-COL-VA	Water	Ammonia by Colour	APHA 4500-NH3 Nitrogen (Ammonia)

This analysis is carried out, on unpreserved samples, using procedures adapted from APHA Method 4500-NH3 "Nitrogen (Ammonia)". Ammonia is determined using the phenate colourimetric method.

PH-PCT-VA	Water	pH by Meter (Automated)	APHA 4500-H "pH Value"

This analysis is carried out using procedures adapted from APHA Method 4500-H "pH Value". The pH is determined in the laboratory using a pH electrode

PH-PCT-VA	Water	pH by Meter (Automated)	APHA 4500-H pH Value

ALS Test Code	Matrix	Test Description	Analytical Method Reference(Based On)

This analysis is carried out using procedures adapted from APHA Method 4500-H "pH Value". The pH is determined in the laboratory using a pH electrode

PO4-DO-COL-VA	Water	Dissolved ortho Phosphate by Colour	APHA 4500-P "Phosphorous"

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". All forms of phosphate are determined by the ascorbic acid colourimetric method. Dissolved ortho-phosphate (dissolved reactive phosphorous) is determined by direct measurement. Total phosphate (total phosphorous) is determined after persulphate digestion of a sample. Total dissolved phosphate (total dissolved phosphorous) is determined by filtering a sample through a 0.45 micron membrane filter followed by persulfate digestion of the filtrate.

PO4-DO-COL-VA	Water	Dissolved ortho Phosphate by Colour	APHA 4500-P Phosphorous

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". All forms of phosphate are determined by the ascorbic acid colourimetric method. Dissolved ortho-phosphate (dissolved reactive phosphorous) is determined by direct measurement. Total phosphate (total phosphorous) is determined after persulphate digestion of a sample. Total dissolved phosphate (total dissolved phosphorous) is determined by filtering a sample through a 0.45 micron membrane filter followed by persulfate digestion of the filtrate.

PO4-T-COL-VA	Water	Total Phosphate P by Color	APHA 4500-P "Phosphorous"

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". All forms of phosphate are determined by the ascorbic acid colourimetric method. Dissolved ortho-phosphate (dissolved reactive phosphorous) is determined by direct measurement. Total phosphate (total phosphorous) is determined after persulphate digestion of a sample. Total dissolved phosphate (total dissolved phosphorous) is determined by filtering a sample through a 0.45 micron membrane filter followed by persulfate digestion of the filtrate.

PO4-T-COL-VA	Water	Total Phosphate P by Color	APHA 4500-P Phosphorous

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". All forms of phosphate are determined by the ascorbic acid colourimetric method. Dissolved ortho-phosphate (dissolved reactive phosphorous) is determined by direct measurement. Total phosphate (total phosphorous) is determined after persulphate digestion of a sample. Total dissolved phosphate (total dissolved phosphorous) is determined by filtering a sample through a 0.45 micron membrane filter followed by persulfate digestion of the filtrate.

PO4-TD-COL-VA	Water	Total Dissolved Phosphate by Colour	APHA 4500-P Phosphorous

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". All forms of phosphate are determined by the ascorbic acid colourimetric method. Dissolved ortho-phosphate (dissolved reactive phosphorous) is determined by direct measurement. Total phosphate (total phosphorous) is determined after persulphate digestion of a sample. Total dissolved phosphate (total dissolved phosphorous) is determined by filtering a sample through a 0.45 micron membrane filter followed by persulfate digestion of the filtrate.

PO4-TD-COL-VA	Water	Total Dissolved Phosphate by Colour	APHA 4500-P " Phosphorous"

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". All forms of phosphate are determined by the ascorbic acid colourimetric method. Dissolved ortho-phosphate (dissolved reactive phosphorous) is determined by direct measurement. Total phosphate (total phosphorous) is determined after persulphate digestion of a sample. Total dissolved phosphate (total dissolved phosphorous) is determined by filtering a sample through a 0.45 micron membrane filter followed by persulfate digestion of the filtrate.

TDS-VA	Water	Total Dissolved Solids by Gravimetric	APHA 2540 C - GRAVIMETRIC

This analysis is carried out using procedures adapted from APHA Method 2540 "Solids". Solids are determined gravimetrically. Total Dissolved Solids (TDS) are determined by filtering a sample through a glass fibre filter, TDS is determined by evaporating the filtrate to dryness at 180 degrees celsius.

TKN-COL-VA	Water	Total Kjeldahl Nitrogen by Auto. Colour	APHA 4500-Norg (TKN)

This analysis is carried out using procedures adapted from APHA Method 4500-Norg "Nitrogen (Organic)". Total kjeldahl nitrogen is determined by sample digestion at 380 celcius with analysis using an automated colourimetric finish.

TN-CALC-VA	Water	TN by Calc (TKN + N+N)	BC MOE LABORATORY MANUAL (2005)

Total Nitrogen is determined by calculation by suming TKN and the NO2 and NO3 results.

TSS-VA	Water	Total Suspended Solids by Gravimetric	APHA 2540 D - GRAVIMETRIC

This analysis is carried out using procedures adapted from APHA Method 2540 "Solids". Solids are determined gravimetrically. Total Suspended Solids (TSS) are determined by filtering a sample through a glass fibre filter, TSS is determined by drying the filter at 104 degrees celsius.

TURBIDITY-VA	Water	Turbidity by Meter	APHA 2130 Turbidity

This analysis is carried out using procedures adapted from APHA Method 2130 "Turbidity". Turbidity is determined by the nephelometric method.

** Laboratory Methods employed follow in-house procedures, which are generally based on nationally or internationally accepted methodologies.
The last two letters of the above ALS Test Code column indicate the laboratory that performed analytical analysis for that test. Refer to the list below:

Laboratory Definition Code	Laboratory Location	Laboratory Definition Code	Laboratory Location
VA	ALS LABORATORY GROUP - VANCOUVER, BC, CANADA		

GLOSSARY OF REPORT TERMS
Surr - A surrogate is an organic compound that is similar to the target analyte(s) in chemical composition and behavior but not normally detected in enviromental samples. Prior to sample processing, samples are fortified with one or more surrogate compounds.
The reported surrogate recovery value provides a measure of method efficiency.
mg/kg (units) - unit of concentration based on mass, parts per million
mg/L (units) - unit of concentration based on volume, parts per million
N/A - Result not available. Refer to qualifier code and definition for explanation

Test results reported relate only to the samples as received by the laboratory.
UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.
Although test results are generated under strict QA/QC protocols, any unsigned test reports, faxes, or emails are considered preliminary.

ALS Laboratory Group has an extensive QA/QC program where all analytical data reported is analyzed using approved referenced procedures followed by checks and reviews by senior managers and quality assurance personnel. However, since the results are obtained from chemical measurements and thus cannot be guaranteed, ALS Laboratory Group assumes no liability for the use or interpretation of the results.

Re: Sable Bulk Sample Geochemical Characterization

Please find attached a digital copy of the final report entitled "*Sable Bulk Sample Geochemical Characterization– July 2009*". The report has been compiled to support the Bulk Sample Application that Hawthorne submitted to the regulatory committee earlier this year. The report addresses components relating to metal leaching & acid rock drainage in the Sable area.

Yours very truly,
LORAX ENVIRONMENTAL SERVICES LTD.

1. Introduction

1. Introduction

Lorax Environmental Services Ltd. (Lorax) was retained to undertake the geochemical characterization of materials associated with a proposed bulk sampling program for the Taurus Project. The Taurus claims are held by Hawthorne Gold Corp. (HGC) and are located near Quartz Rock Creek adjacent to the Cassiar road, in the northwestern British Columbia (Figure 1-1).

This report discusses the results of the characterization program that was conducted in support of the Taurus Property Bulk Sample Program. The primary objective of this study is to assess the potential for acid rock drainage and metal leaching associated with the weathering of geological materials produced during the bulk sampling of the Taurus Zone. This is achieved by presenting the static geochemical testwork including acid-base accounting and solid-phase metal analysis.

Following this introduction, Chapter 2 outlines the regional and deposit geology. The sample selection methodology and rationale are discussed in Chapter 3. Finally, static test results for acid-base accounting and solid-phase metals are discussed in Chapters 4 and 5, respectively.

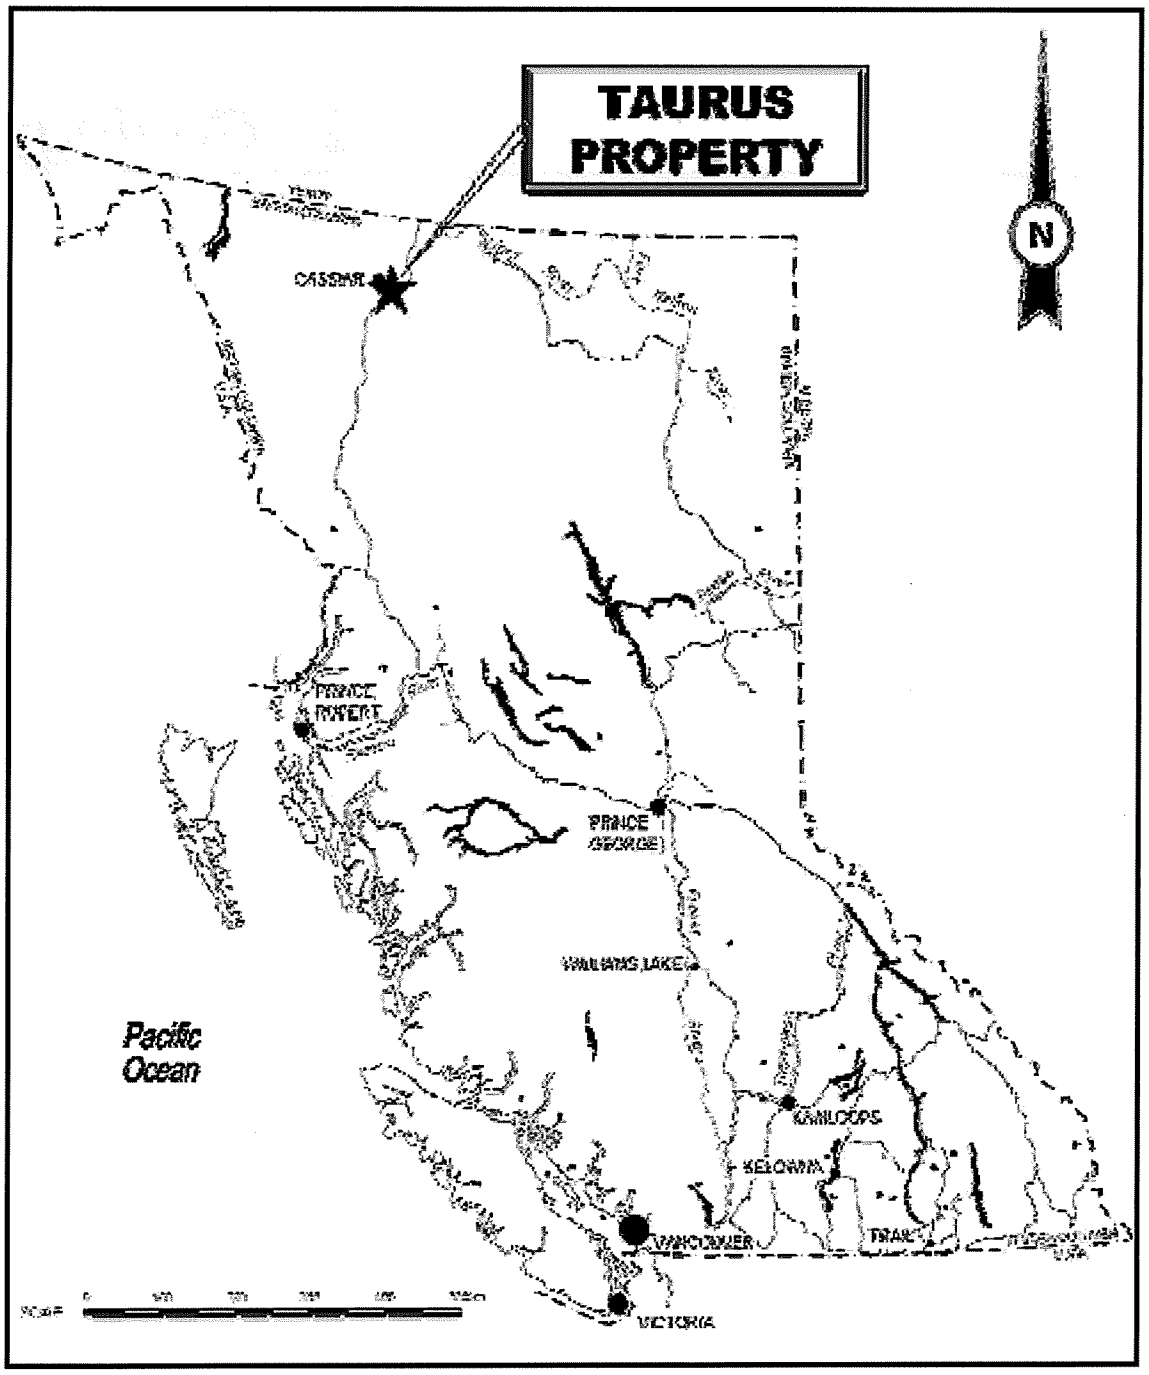

Figure 1-1: Location of Taurus Property near Cassiar, B.C.

2. Geology

2. Geology

2.1 Regional Geology

The project is positioned on the Sylvester allochthon, which is a flat bottomed synclinorium comprised of thrust stacked slices of ophiolite and island-arc type rocks. This Sylvester Group assemblage rests upon miogeoclinal carbonates and clastics of the Cassiar Terrane. The Sylvester Group can be divided into three major divisions (Nelson et al., 1988). The base of the group, Division I, is composed of mainly chert and black argillite, with lesser sandstone, siltstone, diorite and diabase sills, and bedded quartz-pyrite-barite exhalites. Division II, which hosts mineralization at Taurus, is made up of basaltic flows and breccias, chert and argillite, intercalated with variably altered, narrow bodies of ultramafic rocks. The highest exposed structural level of the allochthon, Division III, is comprised of island arc volcanic rocks of basic to felsic composition and limestones. Eight kilometres west of the property the granite to granodiorite Cassiar Batholith intrudes the sediments of the Cassiar Terrane. Cassiar Terrane sediments on the east margin of the allochthon are intruded by the Mt. Haskin and Mt. Reed granitic bodies.

2.2 Local Geology

Overburden in the area is mostly glacial till and drill hole casing depths in the bulk sample footprint suggest overburden is up to 7 m in thickness. Bedrock lithologies at the Taurus Property include thick successions of Division II basalts, argillaceous sediments and rare ultramafic flows or sills, and mafic and lamprophyre dykes. Volcanic and sedimentary sequences on the Taurus property are relatively flat lying and face upwards. However, in the immediate area of the Sable Bulk Sample Pit only mafic volcanics are expected to be encountered within the depth of the proposed pit.

The gold deposit at the Taurus Property is a lode-style mesothermal quartz-carbonate-gold veins hosted in the mafic volcanic strata. Sulphide mineralization includes pyrite, tetrahedrite, arsenopyrite, sphalerite, galena and chalcopyrite.

Descriptions of the lithologies identified in drillholes adjacent to the proposed Bulk Sample Pit, including mineralization, are listed below.

T1 – Basalt – Dark to light green, aphanitic to phaneritic massive rock. This unit is 100 – 250 m thick and hosts the gold mineralized units (see T3 and T4 below) on the Taurus property.

T2 – Altered Basalt – variably altered. Bleached grey to pale violet iron carbonate – sericite – pyrite alteration which weathers rusty red. The alteration is texturally destructive with a common massive compact character.

T3 – Pyritic Mineralized Zone – 10 – 40% fine grained pyrite, commonly banded and lacking significant quartz veining. The banded appearance is actually a shear fabric with basalt altered to sericite/muscovite +/- dolomite +/- leucoxene +/- quartz. Unmineralized quartz carbonate veinlets are common.

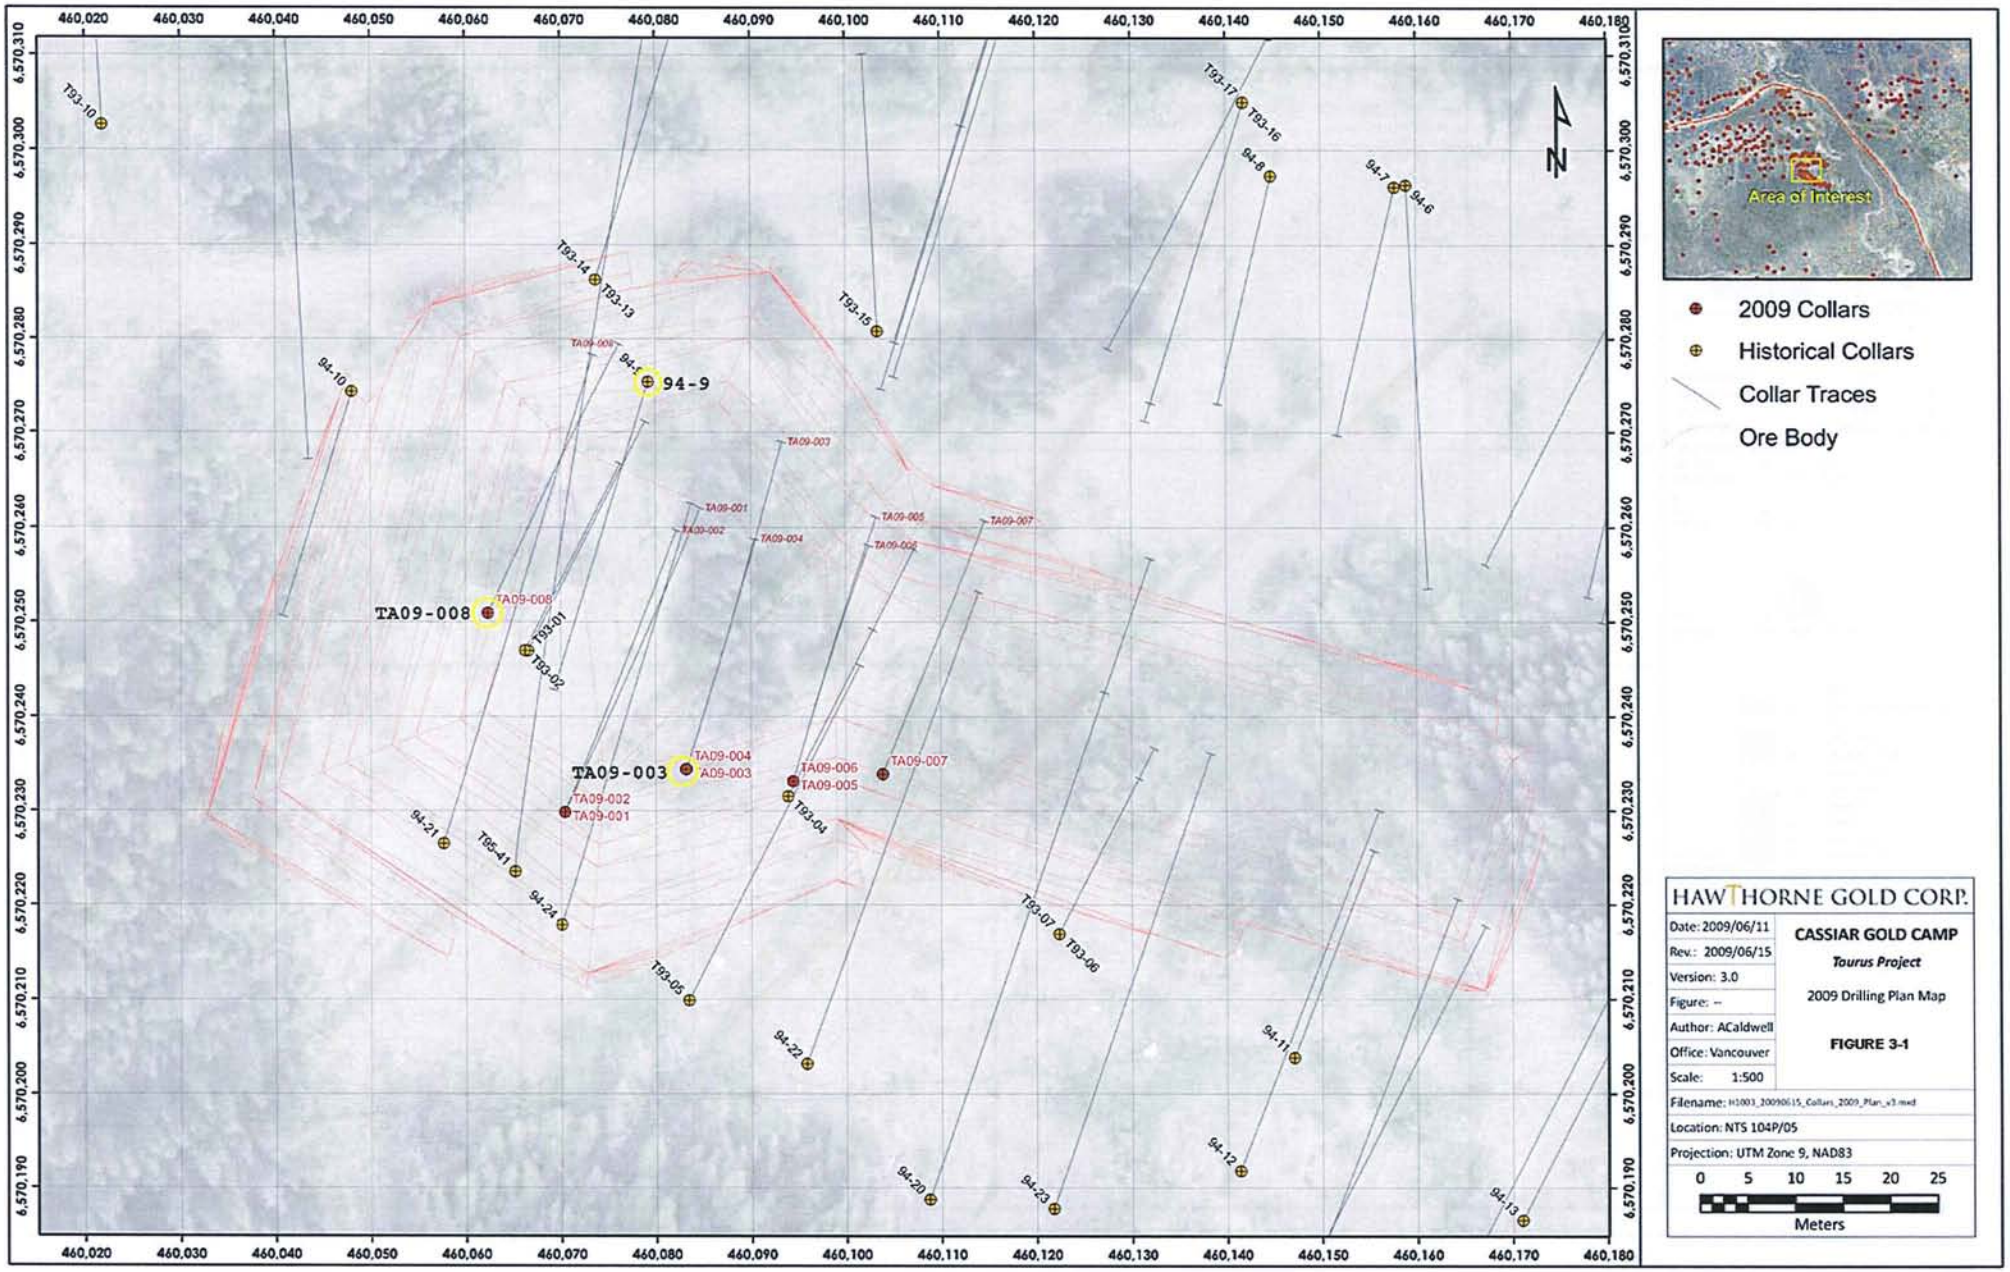

T4 – Pyritic Quartz Vein Zone >5% quartz vein's – 1-10% fine to coarse grained pyritohedrons disseminated in the altered basalt or locally argillaceous chert or deformed argillite. Occurs in bleached basalts. Pyrite in T4 and is generally coarser grained than in T3. Zones average 10 m in width. Two types of veins occur; 1) massive bull quartz which may contain xenoliths and 2) narrow veins with pyrite +/- arsenopyrite alteration haloes occasionally containing visible gold, chalcopyrite, green sericite and sphalerite.

3. Sample Selection

3. Sample Selection

Samples were selected from three drill holes located near the location of the proposed bulk sample pit (Figure 3-1). The drill core includes two holes from 2009 (TA09-03, TA09-08) and one hole from 1994 (94-9). Samples from the majority of the historic core drilling could not be located because the labelling system had weathered away and was not legible. Samples were selected from available core to obtain a good representation of material that will be removed from the bulk sample pit, as well as to characterize material that may be left in the pit walls or removed during subsequent development of the Taurus Zone. Sample intervals, ranging from approximately 0.4 to 1.5 metres, were selected based on review of drill core logs and input from Hawthorne geologists. Appendix A provides details of the samples selected, including drill hole and lithology and Figures 3-2 and 3-3 provide cross section views through the bulk sample area showing location the bulk sample pit outline, drill holes sampled, lithology, and ABA sample results. Specifically, total sulphur percent is plotted in black on the left side of the borehole trace and NPR is color coded green (NPR>20 or red (NPR<2) on the right side of the borehole trace. To ensure ABA results were representative of a specific lithology, an effort was made to select sample intervals that did not cross lithologic boundaries.

Hawthorne has indicated to Lorax that all rock removed from the pit would be treated as ore and no waste rock would be produced. Although sampling was conducted to characterize materials in the pit, the focus of the sampling was to characterize materials that would be left in the pit wall from the 2009 core.

4. Acid Base Accounting

4. Acid Base Accounting

Metal leaching/acid rock drainage (ML/ARD) studies utilize acid-base accounting (ABA) to predict the potential of rock material to become acid generating. ABA is a collection of analyses that include paste pH, inorganic carbon content, sulphur speciation, neutralizing potential (NP), and acid potential (AP) of a sample. The NP:AP ratio, or net potential ratio (NPR), can be compared with standard regulatory criteria to give an indication of the acid generation potential of a given sample. Appendix B provides a description of the analytical techniques used in this study.

In order to facilitate the accounting technique used, both AP and NP are reported in comparable and consistent units of kg $CaCO_3$/tonne of rock. Since the generation of acid is predominantly associated with the oxidation of sulphide minerals, the amount and form of sulphur-bearing mineralization is determined. The oxidation of pyrite produces acid, by the following net reaction,

$$FeS_{2(s)} + 15/4\,O_{2(g)} + 7/2\,H_2O \longrightarrow Fe(OH)_{3(s)} + 4H^+ + 2SO_4^{2-}$$

Acid produced by the above reaction is neutralized by calcite following the reaction,

$$CaCO_{3(s)} + 2H^+ \longrightarrow Ca^{2+} + H_2O + CO_2\,.$$

The two reactions listed above indicate that the 2 moles of acid generated per mole of sulphur in pyrite is neutralized by 1 mole of calcite. If calculated on a weight basis, the acid produced by 1 g of S is neutralized by 3.125 g of calcite. Therefore, since sulphur concentrations are usually reported as a weight percent, neutralization of a material containing 1% acid generating sulphur is reported as 31.25 kg $CaCO_3$ per tonne of acid generating equivalents. In other words:

AP = [Sulphur content (wt. %)] x [31.25 kg $CaCO_3$/tonne rock]

This section discusses ABA results for samples collected from the vicinity of the Sable Bulk Sample Pit on Hawthorne Gold's Taurus property. Acid-base accounting results are summarized by waste rock category in Table 4-1 and presented in their entirety in Appendix C. For purposes of statistical evaluation, results below the detection limit were set to the detection limit and bolded.

4.1 Paste pH

Paste pH is a primary indicator of the availability of existing buffering capacity. On its own the paste pH is not a predictor of the acid generation potential of a given sample. Paste pH is governed by the carbonate mineral solubility and hence the neutralizing potential (NP) present. When the paste pH values are <5.0, the NP present is limited or non-existent. Conversely, higher paste pH values imply the presence of available NP.

The paste pH for mine rock material sampled from the Sable pit range from 8.16 to 9.25, Table 2-1 and Figure 2-1. The greater than neutral paste pH levels for waste rock samples indicate that none of the mine rock material samples were actively producing acidic drainage prior to sampling and will not be immediately acid generating when placed in surface stockpiles.

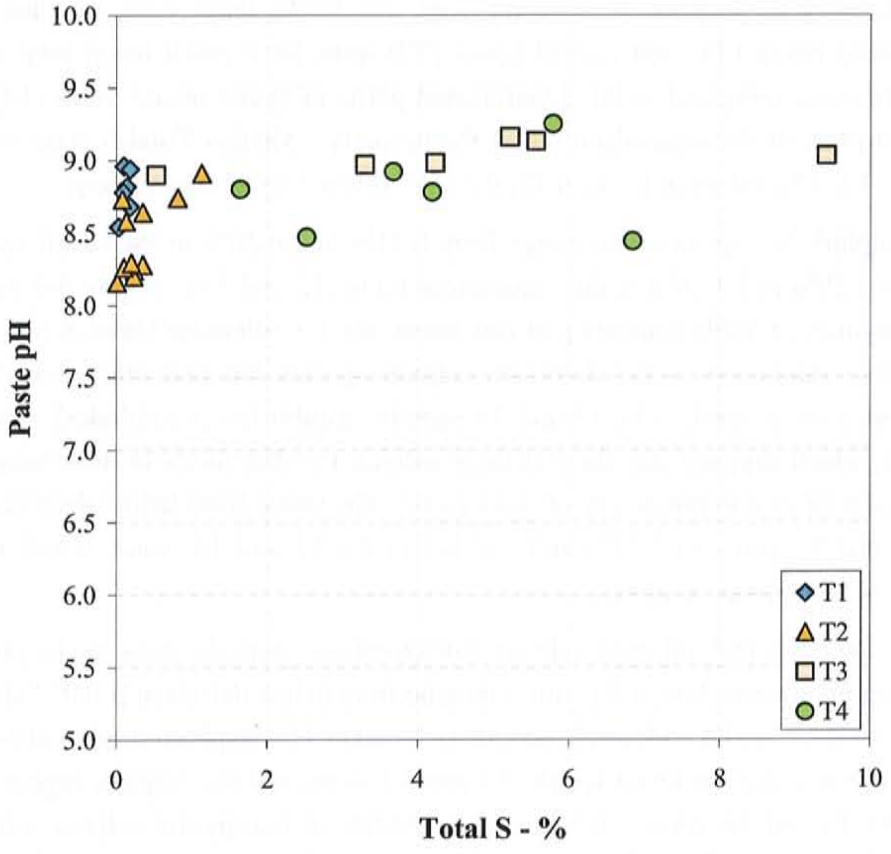

Figure 4-1: Paste pH versus Total sulphur for Sable Zone samples.

4.2 Sulphur Speciation

When considering the acid rock drainage (ARD) potential of a geological material it is important to not only consider the amount of sulphur, but also the forms of sulphur

present. Sulphur may be present in rock materials as: a) sulphide or pyritic sulphur; b) sulphate sulphur; and c) organic or d) elemental sulphur. Since acidic drainage at mine sites is typically generated from the oxidation of sulphide minerals, total sulphur measurement is not always an accurate way to predict the acid generating potential of a sample. The estimation of total acid potential (AP), as determined by the total sulphur in a sample, assumes that all sulphur measured is in the form of pyrite and would oxidize completely, forming sulphate and iron hydroxide [$Fe(OH)_3$]. However, when a significant portion of the total sulphur measured is present as non-acid generating forms of sulphur, sulphide sulphur provides a more accurate estimation of acid generating capacity.

Samples collected from the area of the proposed bulk sample pit were analyzed for their total, sulphate, and sulphide sulphur concentrations. Figure 4-2 compares the total-S concentrations with sulphide-S concentrations for Sable mine rock samples. The unmineralized basalt (T1) and altered basalt (T2) units have much lower total sulphur concentrations as compared to the disseminated pyrite (T3) and quartz veins (T4) units, which host most of the mineralization on the property. Median Total-S concentrations for the T1, T2, T3, and T4 units are 0.12, 0.23, 4.73, and 3.93%, respectively.

Median sulphide-S concentrations range from 0.11% and 0.20% in the basalt units (T1 and T2) to 3.59% and 3.16% in the mineralized units (T3 and T4). Figure 4-2 indicates that the majority of Sable samples plot just below the 1:1 sulphide-S:total-S line, which suggests that sulphide-S is the dominant sulphur species but that other non-sulphide sulphur forms are present. The T3 and T4 samples exhibit lower sulphide-S relative to the total-S, which suggests that there is more sulphur in other forms in these units. The median insoluble-S concentrations of from these units range from below detection limit in the T1 and T2 zones to 1.02% and 0.65%S in the T3 and T4 zones, which may be indicative of non-pyritic sulphide.

Table 4-1 indicates that sulphate sulphur concentrations from the area of the proposed bulk sample pit are very low, with values ranging from below detection (<0.01 %) up to a maximum of 0.12 % (T4 - Mineralized Quartz Veins). The sulphate sulphur component was at or below detection levels for the T1 and T2 zones and was slightly higher for the mineralized T3 and T4 zones. Given the occurrence of non-pyritic sulphur forms and sulphate sulphur, sulphide sulphur was used for the calculation of acid potential.

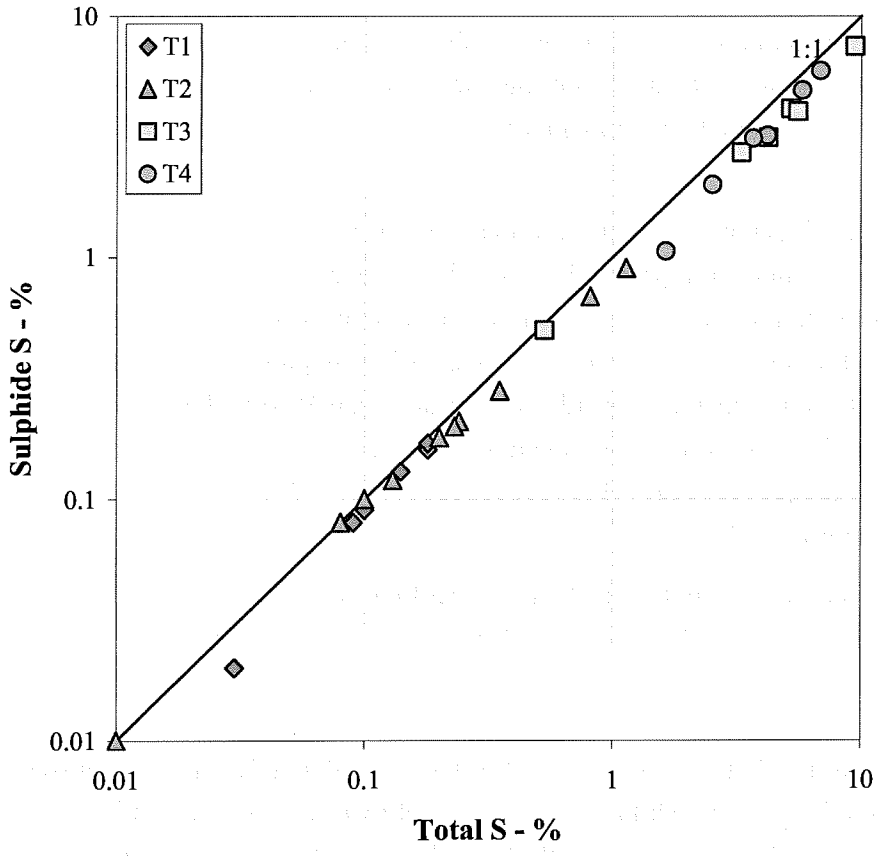

Figure 4-2: Sulphide-S versus Total-S for Sable samples.

4.3 Neutralization Potential

The neutralization potential (NP) of weathering materials is dependent on the composition of minerals that dissolve when exposed to acidic conditions and buffer acidity. Carbonate minerals are fast dissolving and the minerals most typically responsible for acid neutralization. However, not all carbonate minerals neutralize acid as effectively as others. For example, Fe-bearing carbonate minerals, such as siderite and ankerite that contain Fe^{2+}, are much less effective at neutralizing acid as calcite. This is due to the fact that the Fe^{2+} liberated is oxidized to Fe^{3+}, which then precipitates as $Fe(OH)_3$, producing acidity in the process:

$$Fe^{3+} + 3H_2O \longrightarrow Fe(OH)_3 + 3H^+.$$

Therefore, although Fe-bearing carbonate minerals contribute to the neutralizing potential of a sample, the net capacity of a sample to neutralize acid decreases as the amount of Fe-bearing carbonate increases (Jambor *et al.*, 2003). As a result, not only is it important to

quantify the carbonate fraction in a sample, but also it is important to determine the types of carbonate minerals present. It should also be noted that silicate minerals, such as serpentine and olivine, may also contribute to the total neutralizing capacity of a sample; however, the ability of these minerals to buffer mine waters in the field are not well documented.

Both Modified Sobek NP (NP) and carbonate NP (CaNP) values were determined for the suite of Sable samples (Appendix B). Modified Sobek NP is obtained by titration and provides information on the bulk NP of a sample, which is not mineral specific. Carbonate NP assumes that all the inorganic carbon is present as calcite. If the CaNP method yields values that are considerably greater than Modified Sobek NP, this may be an indication that iron-bearing carbonate minerals (*i.e.* siderite and ankerite) are present and caution should be used when using the CaNP values to estimate the available neutralization potential.

The Sable sample set indicates that all geological units exhibit moderate to high neutralization potential. The median CaNP for waste rock material from the Sable samples ranges from 57 kg $CaCO_3$/t in the Basalt unit (T1) to 422 kg $CaCO_3$/t in the mineralized quartz veins (T4), while median Modified Sobek NP values ranges from 71 kg $CaCO_3$/t in the T1 to 354 kg $CaCO_3$/t in the T4, Table 4-1. The mineralized samples (T3 and T4 units) have much higher NP and CaNP values than the unmineralized basalts (T1 and T2), which is consistent with the carbonate alteration noted in the mineralized zones and historic ABA results from the Taurus Property. Figure 4-3 compares CaNP with Modified Sobek NP for the Sable samples. The majority of samples from the altered basalt (T2) and mineralized units (T3 and T4) have CaNP values that exceed Sobek NP values, suggesting that iron-containing carbonates are present in addition to calcite and dolomite. Unaltered basalt (T1) samples plot immediately adjacent to the 1:1 CaNP:Sobek NP line in Figure 4-3, which imply that the measured neutralizing potential in these samples is derived exclusively from calcite. Given the variable carbonate mineralogy present at the Sable lithologies, use of the Modified Sobek NP values is deemed as a best estimate of readily available carbonate neutralization potential.

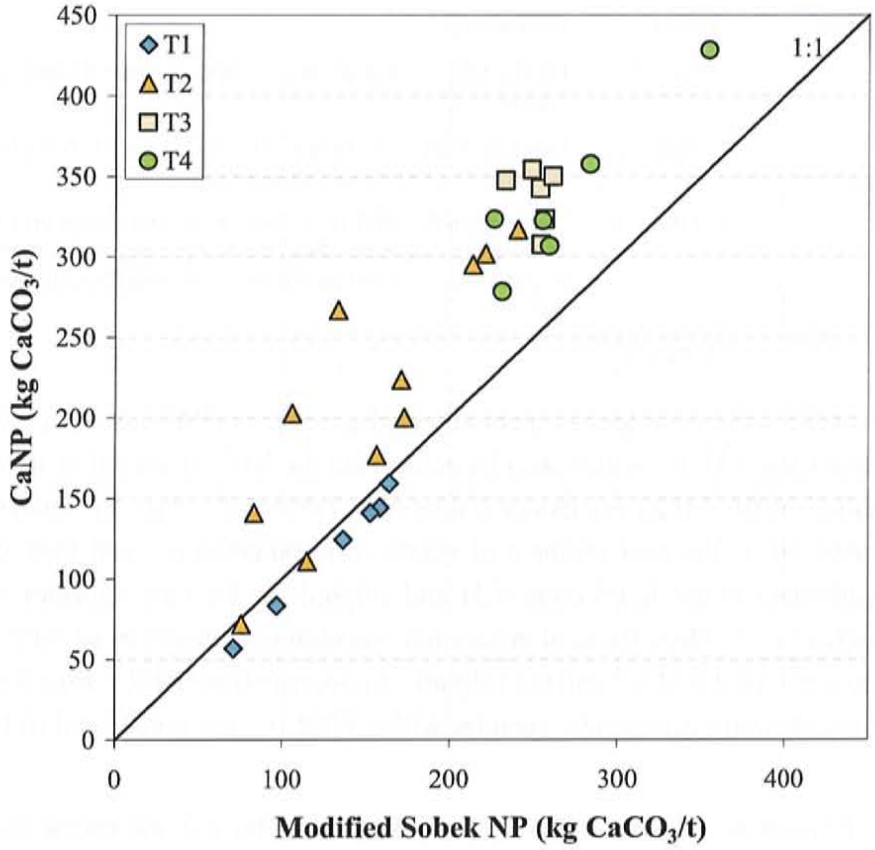

Figure 4-3: Plot showing carbonate NP (CaNP) calculated using total inorganic carbon versus "Modified" Sobek NP in Sable samples.

4.4 Net Potential Ratio

The net potential ratio (NPR) compares the relative proportions of NP to AP, and it can be used over a wide range of AP and NP values. To that end the NPR is used in the following discussion for the purposes of delineating the potentially acid generating (PAG) from the non-PAG samples for the Sable pit samples.

The NPR is compared to criteria specified in the BC Ministry of Energy Mines and Petroleum Resources regulatory guidelines (Price, 1997). These guidelines, as summarized in Table 4-2, indicate that in the absence of any other information a sample with a NPR of less than 1 can be considered as PAG. For a sample with a NPR between 1 and 2, there is a possibility of becoming acid generating, given that the NP is depleted at faster rates than the rate of sulphide oxidation or that the buffering minerals are partially unavailable. NPR values between 2 and 4 indicate a low risk of acid drainage, while NPR values greater than 4 have no potential of ARD.

Table 4-2:
British Columbia Acid-Base Accounting Screening Criteria (from Price, 1997).

Potential for ARD	Criteria	Comments
Likely	NPR < 1	Likely ARD generating unless sulphide minerals are non-reactive
Possibly	1 < NPR < 2	Possibly ARD generating if NP is insufficiently reactive or is depleted at a faster rate than sulphides
Low	2 < NPR < 4	Not potentially ARD generating unless significant preferential exposure of sulphides along fracture planes, or extremely reactive sulphides in combination with insufficiently reactive NP
None	NPR > 4	

Designation of the Sable samples as potentially acid-generating (PAG) or not potentially acid-generating (non-PAG) is undertaken by comparing the NPR measured in samples to criteria specified in BC MEM regulatory guidelines (Table 2-2). For this analysis, the Modified Sobek NP is the best estimate of neutralizing potential derived from quickly dissolving carbonate minerals (Section 4.3) and sulphide S the best indicator of acid potential (Section 4.2). Thus, the acid generation potential is assessed using NPR values calculated from the Modified NP and the sulphide-S concentration (NPR = Modified NP / AP). Applying these measurements, samples with a NPR > 2 are considered to be non-PAG.

The T1 and T2 units have high net potential ratios all well above 2, indicating that these samples have excess NP and no acid generating potential. Samples from the mineralized units (T3 and T4) have variable NPR values ranging from 1.0 to >10, which spans either side of the 2.0 NPR criterion used to demarcate the PAG (NPR < 2.0) from non-PAG (NPR > 2.0). Although the sample set is not very large, the data indicate only mineralized samples containing > 4% sulphide S are PAG, Figure 4-4. This analysis indicates that in general the mineralized T3 and T4 have a higher acid generating potential than the T1 and T2 samples, which are not acid generating.

When viewed on the cross section presented in Figure 3-2, it can be seen that the mineralized samples with NPR values < 2.0 are from the central portion of the bulk sample pit area from borehole 09-03. Samples from the northwest portion of the pit from boreholes 09-08 and 94-9 are non-PAG.

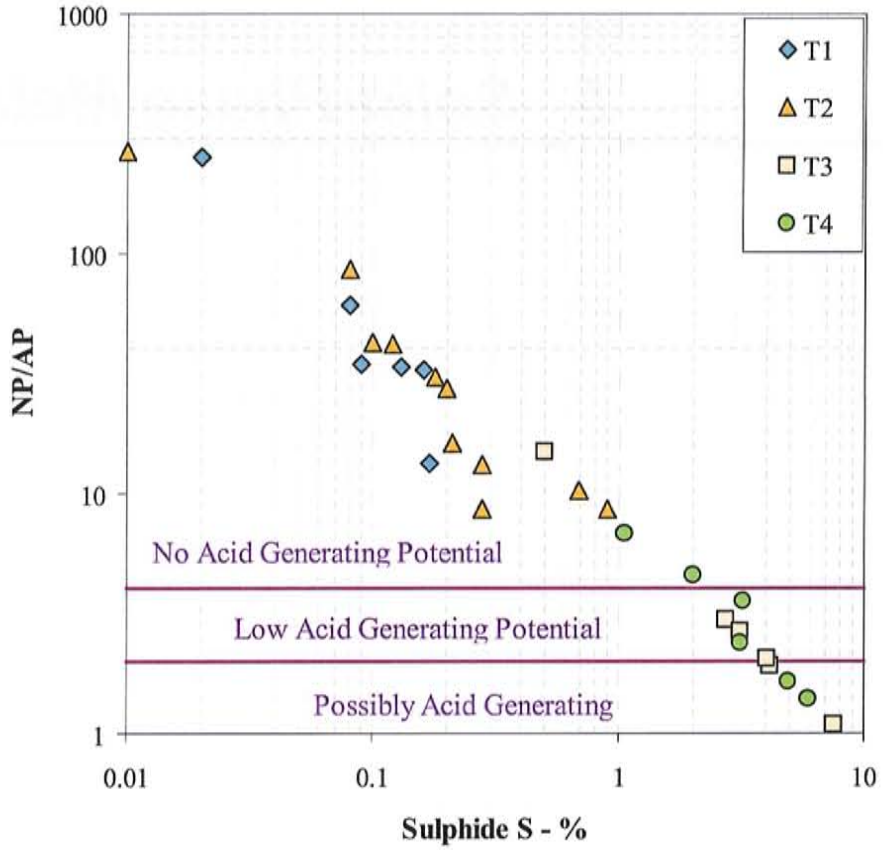

Figure 4-4: Plot showing NPR (TIC-CaNP/AP) versus sulphide sulphur in Sable samples.

5. Solid-Phase Metals

5. Solid-Phase Metals

Solid-phase metals data are used to identify which metals are enriched in the sampled materials. The degree of enrichment of an element over crustal abundance can be used as a general indicator of the metals that could be of potential concern. These metals should be scrutinized in leaching tests in support of further development of the Taurus property. However, solid-phase metal concentrations well above crustal abundance do not conclusively indicate that the metal will be leached at a high rate from the material. Rather, the rate of metal leaching is related to the metal's mineralogical association and the aqueous geochemistry of the infiltrating waters.

Previous MLARD evaluation of the Taurus waste rock material did not include solid phase metals data, which is very useful in conjunction with ABA accounting. The samples collected in 2009 were analyzed using from aqua-regia digestion and subsequent analysis by inductively coupled mass spectrometry (ICP-MS). Solid phase metal data for waste rock material from the Taurus Project are used to identify metals that are present in elevated concentrations and could potentially leach from this material should acid generation occur. Table 5-1 presents a summary of minimum, maximum and median metal abundances obtained for waste rock samples from the Taurus Project and compares them to the average metal concentrations of the earth's crust. An enrichment factor is based on the average crustal abundance is presented in Table 5-1. For purposes of statistical evaluation, samples with results below the detection limit (for example, <10 ppm) were adjusted to half of the detection limit (5 ppm).

An indicator of significant solid-phase enrichment is assigned arbitrarily herein to be median values greater than or equal to three times the crustal abundance. These values are indicated as shaded cells in Table 5-1. Values for elements that were indicated to be present in concentrations below detection were set at detection in order to maintain a conservative analysis. For a complete listing of the solid-phase metals data, refer to Appendix D.

All of the waste rock units exhibit median arsenic (As) and antimony (Sb) concentrations that are elevated with respect to the average continental crustal abundance, particularly in the T3 and T4 units. Median silver (Ag) concentrations are elevated in the mineralized ore zone (T3 and T4 units), which are expected to contain elevated concentrations of precious metals. These metals should be evaluated through kinetic testing.

Table 5-1:
Minimum, maximum, average and median metal concentrations of Sable samples near the proposed bulk sample pit.

6. Shake Flask Extractions

6. Shake Flask Extractions

The water soluble constituents from the 94-09 core samples were determined using a shake flask extraction (SFE) method and the complete results are listed in Appendix E. SFE measures geochemical parameters readily leached by water, and are used in conjunction with other static test results to evaluate the potential for acid rock drainage and metal leaching. Only samples from the 94-09 core underwent SFE, since this historic core had been exposed to site weathering conditions for 15 years. Using weathered core samples rather than recently extracted core for SFE provides a better assessment of elemental constituents that may be released to infiltrating waters that drain from exposed quarry walls or ore stockpiles. The results of the shake flask extractions are summarized in Table 6-1, presented in their entirety in Appendix E and discussed below.

Results from the neutral pH SFE leachate supports the ABA results, which indicate the 5 samples from the 94-09 core are non-PAG. Water extractions were pH-neutral and contained alkalinity > 80 mg $CaCO_3$/L. Sulphate concentrations were low ($\leq$ 11 mg/L) in the extraction solutions despite an ABA sulphide content > 1 %S in the two T4 samples. Similarly, elemental concentrations in the SFE leachate are low with Cd, Cu, Fe, Pb, Ni, Se, Tl and Zn concentrations all being below their respective BC freshwater aquatic life guidelines, assuming discharge into waters with Hardness of 100 mg/L $CaCO_3$. Only aluminum and arsenic were observed to be elevated in the ph-neutral SFE leachates. The elevated arsenic concentrations in the leachates are consistent with elevated arsenic in the solid-phase and arsenic's aqueous behaviour to exist as an oxyanion in solution and which can be mobile over a wide range of pH conditions.

Table 6-1:
Dissolved elemental concentrations from Shake Flask Extraction - 94-09 Core Samples

7. Conclusions

7. Conclusions

The following summarizes the most salient conclusions drawn from the bulk sample characterization program for the Sable Zone:

- Paste pH values are all greater than 9, suggesting that waste materials from the Sable pit will not be immediately acid generating;
- Sulphur content of the basalt (T1) and altered basalt (T2) is low, with the majority of samples having total sulphur contents less than 0.4 %S;
- Acid potential calculated from sulphide sulphur content. Sulphur is present chiefly as sulphide minerals but contains detectable amounts of sulphate-S and insoluble S which may be present as non-pyritic sulphide minerals;
- Use of the bulk NP rather than $CaCO_3NP$ is recommended due to the presence of Fe carbonate minerals. Fe-bearing carbonates were noted in previous geologic reports and ABA data from the Sable area suggest they are present in the altered and mineralized units (T2, T3 and T4), with minor to no iron carbonates indicated to be present in the unaltered basalt (T1);
- Essentially all samples from the basalt and altered basalt (T1 and T2) produced NPR's > 4.0, indicating that the "unmineralized" units adjacent to the proposed bulk sample pit are non-PAG;
- Arsenic and antimony concentrations in the Sable samples are elevated above the average crustal abundance;
- Concentrations in water extractions from weathered core were very low relative to BC Freshwater Aquatic Life Guidelines for most elements except arsenic and aluminum;
- Although dissolved aluminum was elevated in the SFE leachate, on-site water quality monitoring adjacent to disturbed mineralized zones did not exhibit aluminum concentrations exceeding the BC Freshwater Aquatic Life Guidelines;
- SFE leachate from the weathered unmineralized basalt samples from Unit T2 did not have elevated arsenic concentrations. Arsenic was only shown to be released from the mineralized T4 geologic unit (and likely the T3 Unit although no weathered samples from T3 were available for testing); and

- On-site water quality monitoring from a sample labelled "Taurus-Sable Adit Tailings Pond" collected from pH-neutral ponded water adjacent to Sable portal waste rock contained arsenic and antimony concentrations of 0.017 and 0.0003 mg/L, respectively (Pers. Com. Marlin Murphy, Hawthorne Gold). Concentrations of other elements were also below their respective British Columbia aquatic life guidelines. These concentrations are lower than those reported in the Bulk Sample Application for a pond of water in the 88 Hill Pit.
- Mitigation of metalloid leaching will be achieved through ensuring all mineralized material from the T3 and T4 Units is transported to the mill for processing or placed back into the bottom of the pit.
- Upon completion of the pit, berms will be constructed as necessary to limit any overland flow into the pit.
- Although not expected, should the pit water elevation rise sufficiently to discharge to the environment and contain elevated levels of arsenic or antimony, reduction of these concentrations could be achieved through the batch addition of ferric sulphate to the pit waters. Ferric sulphate application is a commonly used method for reducing arsenic concentrations from oxic surface waters.

8. Closure

8. Closure

This report contains the results of ARD/ML characterization investigations and analyses undertaken by Lorax in support of Bulk Sample Permitting for Hawthorne Gold Corporation's Taurus Project. The report may not be relied upon by any other person or entity without the written permission of Lorax Environmental Services Ltd. and Hawthorne Gold Corporation. Any use, which a third party makes of this report, or any reliance on decisions made based on it are the responsibility of such third parties. Lorax accepts no responsibility for damages, if any suffered by any third party as a result of decisions made or actions based on this report.

The information and conclusions contained in this report are based upon work undertaken by trained professional and technical staff in accordance with generally accepted scientific practices current at the time the work was performed. The conclusions presented in this report represent the best technical judgment of Lorax based on the data obtained from the work. The conclusions are based on the site conditions encountered by Lorax at the time the work was performed at the specific testing and/or sampling locations, and can only be extrapolated to an undefined limited area around these locations. The extent of the limited area depends on the geologic conditions, as well as the history of the site reflecting natural, construction and other activities.

Appendix B:
Analytical Methods

HAWTHORNE GOLD CORP.

Canadian Environmental & Metallurgical Inc.

Static Test Procedures for Hawthrone Gold Corp.

July , 2009

1.0 Sample Receiving

Twenty-four pulp samples were received from ALS Chemex on June 23/09 for static testing. The samples were weighed and logged in.

On June 29/09 5 crushed samples were received from ALS Chemex for static testing.

2.0 Sample Preparation

Where necessary a 200 g split was and pulverized in a ring pulverizer to 80% -200 mesh. Splits of the pulverized samples were then submitted for analysis.

3.0 Analysis

3.1 Paste pH

Paste pH was conducted according to the procedure by Sobek A., et. al. 1978 "Field and Laboratory Methods Applicable to Overburdens and Minesoils" (Report EPA-600/2-78-054).

3.2 Acid Base Accounting

The samples were analyzed at CEMI according to the Modified Acid Base Accounting procedure outlined in MEND Project 1.16.1b, 1991.

3.3 Total Sulphur and Carbon

Total sulphur and carbon were determined by Assayers Canada Ltd. Analytical Laboratories using a Leco induction furnace.

3.4 Sulphate-Sulphur

Acid-soluble sulphate was determined by Assayers Canada. In this procedure, the sample is digested with 20% hydrochloric acid and the sulphur content measured by ICP.

3.5 Sulphide-Sulphur

Sulphide-sulphur was determined by Assayers Canada Ltd. The procedure is based on a modified sulphide-sulphur method by Sobek, A. A., *et al.* 1978. "Field and Laboratory Methods Applicable to Overburdens And Minesoils" Report EPA-600/2-78-054. In this procedure, acid-soluble sulphate is first removed by treatment with 20% hydrochloric acid. The sulphide-sulphur in the residue is oxidized to sulphate in a 1:7 nitric acid to water solution, and the sulphur content is then measured by ICP.

3.6 Insoluble Sulphur

Insoluble sulphur is calculated as the difference between total sulphur and the sum of sulphate-sulphur and sulphide-sulphur (Total S – Sulphate S + Sulphide S). Insoluble sulphur is acid insoluble sulphur which is attributed to refractory sulphate compounds such as barite and alunite and to organic sulphur found in coal.

3.7 Inorganic Carbon

Total inorganic carbon was determined by Assayers Canada Ltd. In this procedure, a known weight of sample is placed into a glass test tube and acidified with 25% hydrochloric acid. The sample is boiled to evolve CO_2 which is measured by coulometric titration with a UIC Carbon Dioxide Analyzer.

3.8 Total Metals

Total metals were conducted by Assayers Canada Ltd. on a pulverized sample by digesting 0.500 g in aqua regia at 95°C for 1.5 hours. The extract is then diluted to 20.0 mL and analyzed for metals by ICP-MS.

3.9 Shake Flask Extraction

Eighteen samples of the crushed waste rock were selected for analysis by shake flask extraction using a 3:1 liquid to solid ratio as described by W. A. Price "Draft Guidelines and Recommended Methods for the Prediction of Metal Leaching and Acid Rock Drainage at Minesites in British Columbia"; British Columbia Ministry of Employment and Investment, Energy and Minerals Division.

The leachate was filtered through 0.45µm membrane filter paper and submitted for analysis. The pH was measured using the pH meter; conductivity was measured using the conductivity meter; acidity was determined by titration with base to an end point of either pH 4.5 (free acidity) and/or pH 8.3 (total acidity); alkalinity was determined by titration with an acid to an end point of pH 4.5; sulphate was measured by the turbidimetric method. Subsamples of the leachate were sent to Maxxam Analytics Inc. for metals analysis by ICP-MS, chloride and fluoride analysis by ion selective electrode, nitrate analysis by colourimetry, and total dissolved solids by gravimetry.

Re: Taurus Bulk Sample Geochemical Work Scope & Budget

A geochemical work scope in support of a bulk sample Permit Application for the Taurus Project in north central British Columbia is outlined below. The general tasks outlined below will be required to complete the geochemical study. It is understood that at this stage of project development, only an initial screening study is required. However, the general approach required to conduct a comprehensive ARD/ML study to support Pre-Feasibility Studies, Mine Waste Management Plans and Environment Impact Assessment for submission with the regulatory agencies is also outlined below.

This study would be conducted to evaluate the geochemical characteristics of the deposit. The study would include an initial solid-phase geochemical assessment of various rock types within the deposit. The results of this assessment provide insight into which materials may have a high risk of metal leaching or acid generation. This information can be used to determine the extent and type of waste management that may be require during development of the Bulk Sample. The tasks to be completed for the study would include the following.

1. Determine the location of samples for static testing (ABA and solid phase metals) based on information on the deposit geology obtained from client. In order to select samples, it is requested that Hawthorne provide Lorax with the information listed below.
   - Geology summary report on the mineral deposit
   - Copy of geochemical assay report
   - Plan showing drill collar locations and hole ID's
   - Representative geologic cross sections showing geology, drill holes, ore zone and proposed adit

2289 Burrard Street, Vancouver, BC V6J 3H9 CANADA
Telephone: (604) 688-7173 Facsimile: (604) 688-7175

- Discussion with chief geologist regarding deposit geology and core availability
- Geologic logs and geochemistry assay data in digital format for holes selected for sampling (based on information obtained above)
- Water quality data from existing ponds adjacent to the proposed sample area

2. Select sample intervals from information listed above and provide Hawthorne with a sample list.
3. To maintain a low cost for the program Lorax staff it is not proposed to have Lorax staff travel to site, rather, Hawthorne staff would collect three or four samples from each major rock type that may be intersected during the development of the bulk sample. For the purpose of this work plan it is assumed that a total of 30 samples will be required.
4. Conduct ABA and solid-phase metal analyses on the 30 samples.
5. Write technical memo relating the results of the static tests to the deposit geology and identifying materials that may have a high ARD/ML potential.

The memo will clearly document the results of all analyses, provide a preliminary interpretation of the geochemical risk posed by the major lithologic units, and outline possible remedial options, if deemed necessary.

Disbursements include costs associated with miscellaneous telephone and courier charges, and office support. The budget associated with the completion of the technical memo and associated analyses is listed in Table 1. The dollar value of $20,550 is exclusive of applicable taxes. Lorax also applies a 5% surcharge on disbursements and analytical costs. The surcharge on analytical costs can be avoided by having the laboratory bill directly to the client.

I appreciate the opportunity to participate in the Taurus Project. Should you have any questions or concerns regarding the scope and budget presented in this budget, please do not hesitate to contact me directly.

Yours very truly,
LORAX ENVIRONMENTAL SERVICES LTD.

Re: Taurus Bulk Sample Geochemical Work Scope & Budget

A geochemical work scope in support of a bulk sample Permit Application for the Taurus Project in north central British Columbia is outlined below. The general tasks outlined below will be required to complete the geochemical study. It is understood that at this stage of project development, only an initial screening study is required. However, the general approach required to conduct a comprehensive ARD/ML study to support Pre-Feasibility Studies, Mine Waste Management Plans and Environment Impact Assessment for submission with the regulatory agencies is also outlined below.

This study would be conducted to evaluate the geochemical characteristics of the deposit. The study would include an initial solid-phase geochemical assessment of various rock types within the deposit. The results of this assessment provide insight into which materials may have a high risk of metal leaching or acid generation. This information can be used to determine the extent and type of waste management that may be require during development of the Bulk Sample. The tasks to be completed for the study would include the following.

1. Determine the location of samples for static testing (ABA and solid phase metals) based on information on the deposit geology obtained from client. In order to select samples, it is requested that Hawthorne provide Lorax with the information listed below.
   - Geology summary report on the mineral deposit
   - Copy of geochemical assay report
   - Plan showing drill collar locations and hole ID's
   - Representative geologic cross sections showing geology, drill holes, ore zone and proposed adit

2289 Burrard Street, Vancouver, BC V6J 3H9 CANADA
Telephone: (604) 688-7173 Facsimile: (604) 688-7175

- Discussion with chief geologist regarding deposit geology and core availability
- Geologic logs and geochemistry assay data in digital format for holes selected for sampling (based on information obtained above)
- Water quality data from existing ponds adjacent to the proposed sample area

2. Select sample intervals from information listed above and provide Hawthorne with a sample list.
3. To maintain a low cost for the program Lorax staff it is not proposed to have Lorax staff travel to site, rather, Hawthorne staff would collect three or four samples from each major rock type that may be intersected during the development of the bulk sample. For the purpose of this work plan it is assumed that a total of 30 samples will be required.
4. Conduct ABA and solid-phase metal analyses on the 30 samples.
5. Write technical memo relating the results of the static tests to the deposit geology and identifying materials that may have a high ARD/ML potential.

The memo will clearly document the results of all analyses, provide a preliminary interpretation of the geochemical risk posed by the major lithologic units, and outline possible remedial options, if deemed necessary.

Disbursements include costs associated with miscellaneous telephone and courier charges, and office support. The budget associated with the completion of the technical memo and associated analyses is listed in Table 1. The dollar value of $20,550 is exclusive of applicable taxes. Lorax also applies a 5% surcharge on disbursements and analytical costs. The surcharge on analytical costs can be avoided by having the laboratory bill directly to the client.

I appreciate the opportunity to participate in the Taurus Project. Should you have any questions or concerns regarding the scope and budget presented in this budget, please do not hesitate to contact me directly.

Yours very truly,
LORAX ENVIRONMENTAL SERVICES LTD.

Bruce Mattson

Taurus Geochemical Characterization Work Plan Outline
Climate & Meteorology

Study Area Boundaries:

- Local study area (LSA) will comprise a radius of approximately 10 km surrounding the project footprint that includes Cassiar townsite and Columbia Yukon Explorations' (CYE) Storie Molybdenum project.

- Regional study area (RSA) will comprise a radius of up to 200 km surrounding the project footprint, dependent on the quality, availability, and periods of record of regional weather stations.

Sampling Approach:

- CYE has been operating two weather stations in the LSA at Cassiar Townsite and the Storie project for between one and three years. Hawthorne is working on an agreement with CYE to obtain access to these data. The stations are reportedly recording the following parameters at an hourly interval:
    - Air temperature;
    - Wind speed and direction;
    - Relative humidity;
    - Barometric pressure;
    - Solar radiation; and,
    - Rainfall.
- CYE has also performed snow surveys in the LSA. Hawthorne expects to have access to these data once the above agreement has been finalized.

- Environment Canada has data available for 35 current and historical weather stations within a 200 km radius of the project area, including Cassiar, Cassiar Mine, Dease Lake and Good Hope Lake.

Analytical Approach:

- The climate/meteorology study will compare data from weather stations within the LSA to regional data within the RSA to find relationships that can be used to estimate site conditions for various statistical return periods.

Taurus Geochemical Characterization Work Plan Outline

Study Area Boundary:

- Study area restricted to the project footprint

Sampling Approach:

- The overall ARD/ML study approach including the sampling will be conducted in a manner consistent with the BC MEMPR Guidelines (Price, 1997) and the Policy for Metal Leaching and Acid Rock Drainage at British Columbia Minesites (BCMEMPR and BCMELP, 1998).

- Sampling will include materials that will be disturbed or exposed within the project footprint including waste rock, tailings, pit wall and overburden.

    - Pit wall and waste rock static test samples obtained from drill core (n~100) and historic rock piles mined from existing exploration adits (n=4)

    - Overburden samples to be collected from exploration trenches (n=6)

    - Tailings samples obtained from existing deposit (n=3) and bench scale metallurgical testing (n=3)

- Samples will be indexed by rock type and alteration consistent with the methodology used by Hawthorne to define the geology of the deposit to allow interpolation of the sample results within the deposit area and facilitate the development of waste management plans.

Analytical Approach:

- Samples will be sent to SGS CEMI in Burnaby. Analytical tests will include mineralogy, acid-base accounting, solid-phase metals, shake flask extractions and laboratory kinetic testing.

    - Mineralogy assessed using optical microscopy and XRD with Rietveld quantitative phase analysis

    - ABA will include paste pH, inorganic C, neutralization potential using MEND modified ABA procedure, sulphur speciation (total, S^{2-}, SO_4), fizz.

    - Solid phase metals will be determined using an aqua-regia solution and the leach analysed using ICP-MS.

    - Laboratory kinetic testing will be conducted using standard ASTM D5744 humidity cell procedure.

- Field kinetic testing will be conducted on waste rock and tailings to evaluate leaching conditions under site climatic conditions.
    - Field testing will include bins containing 150 kg to 200 kg of material. A leachate collection system will be installed to collect up to 20 L of drainage waters. Field bin leachate will be sampled periodically as site precipitation and temperatures allow.
    - Leachate analyses are outlined in the table below.

Parameter(s)
Routine (pH, alkalinity, bromide, chloride, fluoride, sulphate)
Dissolved Metals: Al, Sb, As, Ba, Be, Bi, B, Cd, Ca, Cr, Co, Cu, Fe, Pb, Li, Mg, Mn, Mo, Ni, P, K, Se, Si, Ag, Na, Sr, Th, Sn, Ti, U, V, Zn, Hg

Taurus Work Plan Outline
Hydrology

Study Area Boundaries:

- Local study area (LSA) will comprise the watersheds of Troutline Creek, Quartzrock Creek, McDame Creek above the confluence of McDame Creek and Quartzrock Creek.

- Regional study area (RSA) will comprise a radius of up to 200 km surrounding the project footprint, dependent on the quality, availability, and periods of record of regional hydrometric stations.

Sampling Approach:

- Columbia Yukon Explorations (CYE) has been operating a hydrometric monitoring station Troutline Creek with up to 3 or 4 years of data. Hawthorne is working on an agreement with CYE to obtain access to these data.

- Hawthorne has established hydrometric sampling stations in 2009 on Quartzrock Creek just above the project site and the Cassiar road.

- Hawthorne plans to establish another hydrometric station on McDame Creek just downstream of the confluence with Quartzrock Creek near Jade City. This is located within approximately 1 km downgradient of the Table Mountain Mill where Hawthorne plans to mill its Taurus project ore.

- Regional hydrometric data is available through the Water Survey of Canada (WSC) for eight stations within approximately 100 km of the project area. These include stations on the Cottonwood River above Bass Creek approximately 18 km south-southwest of the site, and on the Dease River at McDame approximately 30 km east-southeast of the site.

Analytical Approach:

- The hydrology study will compare data from local hydrometric stations within the LSA to regional data within the RSA to find relationships that can be used to estimate site conditions for various statistical return periods.

    - The analysis will consider variables such as proximity to site, drainage area, and mean catchment elevation.

Taurus Work Plan Outline
Hydrogeology

Study Area Boundaries:

- Local study area (LSA) or site-scale of investigation is separate for the mine site and mill the site. The mine site LSA will comprise the groundwater catchment area between Troutline and Quartzrock Creeks. The mill site LSA will comprise the groundwater flow regime between the mill and proposed tailings facility and McDame Lake and/or McDame Creek.

- Regional study area (RSA) or regional-scale of investigation will comprise the groundwater region defined by the confluence of Troutline, Quartzrock and McDame Creeks and the surrounding height of land. A detailed study of the RSA is not within the scope of this assessment.

Sampling Approach:

- Study design, objectives, approach and sampling methodology should follow guidelines outlined by the BC Ministry of Environment entitled "Water and Air Resource Protection Guidelines for Mine Proponents and Operators – Baseline Monitoring" (MoE 2009).

- Groundwater protection and regulation under the BC *Water Act* must be followed during well construction, installation, and closure.

- Sampling will include the collection of groundwater quality samples and their analysis.

    - Groundwater quality samples collection should generally follow 2003 British Columbia Field Sampling Manual.

    - Monitoring wells should be monitored for groundwater quality on a quarterly basis for a period of at least one year.

        - Fall (October), Winter Baseflow (March), Spring Freshet (June), Summer (August).

        - Analytical parameter list should mimic the surface water quality investigation with the exception of total metals.

        - All groundwater quality samples should be in-line filtered in the field.

- Monitoring will include measurements of water level in monitoring wells

    - Water levels should be measured monthly for a period of at least one year.

    - Select wells will be outfitted with automated water level dataloggers (ie: adjacent to creeks)

Mine Site

- Objective of sampling is to define the hydrogeology of the LSA as well as the baseline groundwater quality of the LSA.
    - Data will be used to establish baseline groundwater quality.
    - Collection of physical information will also be critical toward developing a mine-site-wide water balance and for evaluation of potential effects of mine development on quality of groundwater and interrelated surface water resources.
- Angled boreholes (A1 and A2) will be used to measure the hydraulic conductivity between and across the ore-body vein structure. Pre-existing exploration boreholes should be targeted for this investigation.
    - Selection of representative cross-cut of vein-structure down-gradient of each pit
        - Measure K of vein and surrounding mafic volcanics
    - One borehole down-gradient of each pit (**Figure XX**) with up to six packer tests per borehole
- Approximately eight (8) monitoring wells are proposed around the mine site (**Figure XX**). The purpose of these wells is to monitor groundwater quality and groundwater elevation trends.
    - Well 1: up-gradient well should function as a background well to monitor trends in groundwater quality not affected by Project development.
        - Background groundwater monitoring requirements may be met by pre-existing water supply well at the Mine Site.
    - Well 2: deep bedrock located between two pits. Final depth should target proposed pit bottom elevation.
        - Approximately five (5) packer tests are proposed for this borehole.
    - Well 3 and 4: Two nested (one deep/bedrock, one shallow/overburden) between Pit #1 and Quartzrock Creek;
        - Approximately five (5) packer tests are proposed for the deep bedrock borehole.
    - Well 5 and 6: Two nested (one deep/bedrock, one shallow/overburden) downgradient of Pit #2 (West Pit);

        - Approximately five (5) packer tests are proposed for the deep bedrock borehole.

    - Well 7 and 8: Two nested (one deep/bedrock, one shallow/overburden) downgradient of each waste rock dump.

        - Assumption: waste rock will be placed in one pile between the two pits. If separate waste rock piles are proposed, additional wells may be required.

Mill Site

- Objective of sampling is to provide baseline groundwater quality upstream and downstream of the existing tailings facility.

- Three (3) wells are proposed for mill site and will target the gravel-rich overburden in which the tailings facility currently resides (**Figure XX**).

    - Well 9: up-gradient well will function to establish background groundwater quality;

        - Background groundwater quality monitoring requirements may be met through the use of pre-existing monitoring wells or piezometers.

    - Well 10 and 11: Two wells will function to identify groundwater quality down-gradient of the existing tailings facility, namely between the tailings facility and McDame Lake to the north and between the tailings and McDame Creek to the east.

- Additional studies will be required for the tailings management facility in order to satisfy water balance and geotechnical considerations. These physical assessments will be conducted as part of a separate investigation.

Analytical Approach:

- Groundwater quality samples will be sent to ALS Laboratories in Vancouver and will be analyzed for a full suite of physical and chemical parameters including all parameters required to meet regulatory standards.

    - Samples will be analyzed for major, minor, and trace cations using ICP-MS, and anions using ion chromatography.

    - Each water quality sampling period will include a QA/QC program consisting of one field replicate, one travel blank and one filtration blank. Laboratory QA/QC will include analysis of laboratory splits, blanks, and certified reference materials.

- *The hydrogeology study will be limited to the Mine Site.* Analysis of the following data will be made to evaluate potential effects of development on the LSA:

- Groundwater level data from pre-existing wells, mine features (adits) and to-be-installed monitoring wells;
- Flows estimated from local hydrometric stations within the LSAs;
- Hydraulic conductivity measurements from representative units within the Mine Site; and
- Surface and sub-surface geology, including evaluation of overburden, bedrock units, and structure.

Taurus Surface Water and Sediment Quality Work Plan Outline

Study Area Boundary:

- Study area includes upstream Troutline and Quartzrock creeks extending through to the confluence with McDame Creek. Water courses down gradient of the tailings impoundment are within in the study area. The study area also includes McDame Creek immediately upstream of McDame Lake extending approximately 1 km downstream of McDame Lake to a point below the inflow of water influenced by tailings seepage.

Sampling Approach:

- The overall surface water and sediment quality baseline study approach, including the sampling, will be conducted in a manner consistent with the "Water and Air Resource Protection Guidelines for Mine Proponents and Operators - Baseline Monitoring (Draft)" (MOE, 2009) and the "British Columbia Field Sampling Manual: For Continuous Monitoring of Air, Air-Emission, Water, Watewater, Soil, Sediment, and Biological Samples" (MELP 2003).

- Sampling will include surface water and sediment from locations that, together, will be used to predict and monitor the significance of effects of mining during construction, operations, decommissioning and post-closure. Compilation of a more extensive water quality baseline dataset is facilitated via a data-sharing agreement with Columbia Yukon Explorations (CYE) using baseline data collected for the Storie Moly Project. Monitoring stations include:

    - TL2: Located midway along Troutline, between Cassiar and the highway, upstream from potential mine influence. This site includes water quality data from selected months from August 2006 to present.

    - TL3: Located in lower Troutline at the highway, upstream of the confluence with McDame creek and downstream of potential mine influence. This site was installed in May 2009 and has been sampled monthly since then.

    - TL4: Located in Troutline immediately upstream of the Quartzrock Creek confluence and downstream of potential mine influence. This station was established and sampled for water quality in August 2009.

    - Q1: Located in Quartzrock Creek 2 km upstream of the Bailey bridge, and upstream of potential mine influence. This site was established in July 2009 and has been sampled monthly.

    - Q2: Located in Quartzrock Creek at the bridge, immediately upstream of potential mine influence. This station was established and sampled in May 2009 due to the inaccessibility of the other Quartzrock sites in the spring.

- Q3: Located in Quartzrock Creek immediately upstream of the confluence with Troutline creek and downstream of potential mine influence. This station was established and sampled in August 2009.

- Based on a review of maps around the tailings impoundment and the mill it appears likely that a significant amount of tailings-influenced water flows east of the tailings impoundment and through three ponds before discharging into McDame creek. Therefore, the following water and sediment quality monitoring stations will be established in the last week in September, 2009:

    - LRX1: Located in McDame Creek, west of McDame Lake, and upstream of potential tailings and mill influence on water and sediment quality. This station will provide information on background conditions in McDame Creek.

    - LRX2: Located in the first pond downstream of the historic and future tailings impoundment in the eastern direction.

    - LRX3: Located in the third pond between the tailings and McDame Creek in the eastern direction.

    - LRX4: Located in McDame creek near the confluence of the creek flowing north of the third pond.

- To gain baseline information on the surrounding and potentially impacted lake and ponds, sediment as well as water quality samples from the near-surface and bottom waters will be collected at the following sites:

    - A1: Located in McDame Lake north of the tailings impoundment.

    - A2: Located in the first pond east of the tailings impoundment.

- Water quality samples will be collected at each of the stations monthly, and more frequently during freshet, until July 2010.

- Sediment samples will be collected in a manner which allows for the assessment of biogeochemical controls governing the distribution of trace elements in surface sediments, and to identify any spatial trends in sediment chemistry.

- Location of sediment samples will correspond roughly with the water quality sampling stations. However, the exact location will be dependent on locating depositional areas during the field investigation.

- Stream sediment sample composites (from at least 3 areas within the depositional zone) will be collected from each of the monitoring stations and triplicate samples will be collected from two sites to assess within site variability. Observations recorded in the field will include water depth, depth of the sediment sample (~3 cm), the sediment

vertical profile (i.e. abundance of fine sediment), sediment texture, colour and structure, and the presence of debris, odour, or oily sheen.

Analytical Approach:

- Water quality samples will be sent to ALS Laboratories in Vancouver and will be analyzed for a full suite of physical and chemical parameters including all parameters required to meet regulatory standards.

- Samples will be analyzed for major, minor, and trace cations using ICP-MS, and anions using ion chromatography.

- Each water quality sampling period will include a QA/QC program consisting of one field replicate, one travel blank and one filtration blank. Laboratory QA/QC will include analysis of laboratory splits, blanks, and certified reference materials.

- Sediment samples will be sent to SGS CEMI in Burnaby and will be analyzed for a full suite of physical and chemical parameters. The samples will be lab dried, ground, and screened to 63 µm prior to analysis by ICP-MS, sulphur, TOC, and grain size. For metals analysis, dried samples will be digested in an aqua regia cocktail according to the B.C. Strong Acid-Leacheable Metals.

- Each sediment quality sampling period will include a QA/QC program consisting of sample splits and certified reference materials.

Taurus Aquatic Resources Effects Assessment Work Plan Outline

Study Area Boundary:

- Study area includes upstream Troutline and Quartzrock creeks extending through to the confluence with McDame Creek. Water courses down gradient of the tailings impoundment are within in the study area. The study area also includes McDame Creek immediately upstream of McDame Lake extending approximately 1 km downstream of McDame Lake to a point below the inflow of water influenced by tailings seepage.

Assessment Approach:

- The aquatic resources effects assessment considers all user groups of the aquatic resource including fish, benthic invertebrates and periphyton.

- Data, including the site water balance, stream flows, groundwater flows, predicted loadings derived from the ML/ARD assessment, and aquatic organism and habitat surveys, will be integrated to generate sources and loadings of parameters of concern.

- Using this information water quality predictions will be generated for a range of probably flow conditions.

- The significance of the water quality predictions with regards to ecological effects are then assessed through:

    - comparison of predicted water quality values with established guidelines for the protection of aquatic life;

    - comparison of predicted values to other mine-impacted streams in the region;

    - consideration of scientific principles relevant to contaminant bioavailability and toxicity; and

    - consideration of regional and site-specific variables which may affect contaminant behaviour.

Fisheries and Aquatic Resources

Introduction and Overview

Information regarding aquatic resources, particularly fish community composition and structure can be important when evaluating the overall sensitivities of fish species and communities to potential changes in water quality that might accompany mine development. Fish can also be good biomonitors of overall ecosystem health as they rely on other trophic groups (e.g., benthos) for food. Finally protection of fish, fish habitat and the management of fisheries resources, are regulated by the Federal Fisheries Act; therefore, the potential environmental effects of the project on fish and fish habitat will need to be considered.

Watercourses associated with the Taurus Project area include Troutline, Quartzrock, and McDame Creeks. Troutline and Quartzrock Creeks form the west head-waters of McDame Creek. The drainage basins of Troutline and Quartzrock occur in a region of rugged mountains and plateaus separated by wide glaciated valleys and lowlands with a sub-arctic climate.

Assessment of Existing Information

Existing information for project area will be compiled from a variety of sources such as provincial and federal regulators, including existing databases (e.g., Fisheries Information Summary System). Where possible data will also collected through discussions with knowledgeable members of the local First Nation communities and local stakeholders. Existing aquatic environment information for the project area includes:

- Results of a baseline fisheries survey completed in October 1995 for Cyprus Canada (EVS Consultants 1995);
- Fisheries information compiled as part of the Good Hope Lake Small Hydro Feasibility Study completed by New Era Engineering Corporation (Clarkson 1996); and
- Historical lake survey reports for selected lakes associated with the McDame System such as McDame Lake, Cook Lake, and Simmons Lake (e.g, Klein 1972).

In addition there have been several recent fisheries baseline investigations completed in support of the proposed Storie Molybdenum Project located to the west of the Taurus Project. Field investigations were completed in 2007 and 2008 and generated information such as::

- Fish and fish habitat data – includes habitat assessments of various watercourse reaches as well as fish sampling to determine community composition, presence/absence, and relative abundance. Collection methods have included minnow trapping, electrofishing, gillnetting and angling

- Benthic invertebrate data – Benthic data (triplicate samples collected using a 250µm mesh Surber sampler) is available for various watercourses in the area including Troutline Creek. Each sample has been analyzed to 'lowest practical taxonomic level' by certified taxonomist. Watercourses are generally dominated by Ephemeroptera (mayflies), Plecoptera (stoneflies) and Chironomids.

Site-Specific Survey - 2009

A site specific assessment will also be completed supplement existing information and to further evaluate aquatic habitat associated with various site waterbodies/watercourses. The survey will focus the McDame Lake/Creek area including several small ponds and associated connecting streams that are potentially influenced by the existing tailings impoundment at the Table Mountain mine site.

Fish species presence will be determined using a variety of techniques such as electrofishing, minnow trapping, and seine netting as described in *Fish Collection Methods and Standards Version 4.0* (RIC, 1997a). All fish captured will be enumerated by species, measured (fork length and full length), weighed, and released unharmed at point of capture.

An appropriate fish collection permit will be acquired prior to initiating the field program.

Deliverables/Output

The following information/output will be obtained through the aquatic assessment:

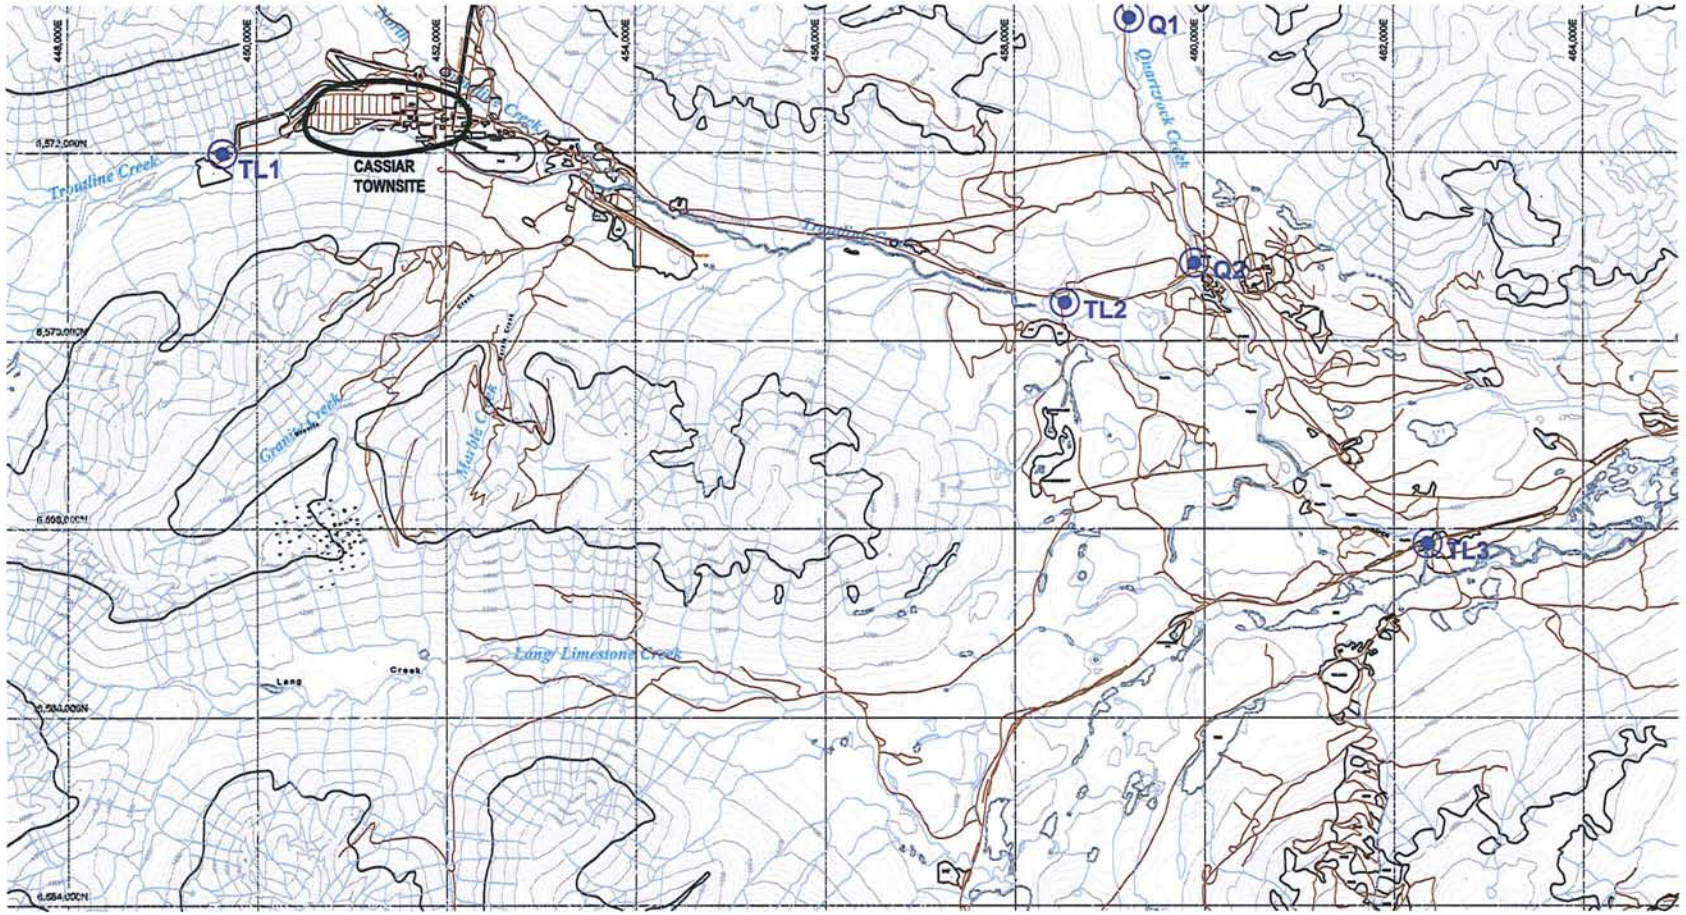

- general species list and understanding of geographic distribution in the study area;
- project specific information regarding fish-community composition and health;
- project specific information regarding fish habitat features (e.g., substrates, in-stream characteristics, description of riparian vegetation, benthic invertebrate communities, etc.);
- selected fish meristics; and
- Summary of fisheries information obtained from the DRFN, local residents, etc. (this information ties into the social-economic component of the project).
