## **Introduction**

The June Bug property, tenure # 537235, was originally staked as a twenty-five cell claim, in July, 2006, thence reduced to a seventeen cell claim, and has since been further reduced in size to a two cell tenure, comprising 41.33 hectares. The property was initially staked to investigate a 1930's report of gold being found in an 80 metre adit, said to have been tunneled into white, glassy quartz, in an altered volcanic formation close to a granitic contact and intersected by a series of quartz felsite dykes. [EMPR Bulletin 1 (1932), pp. 70, 71]. The area is underlain by Triassic Mount Lytton Complex intrusives, comprising dioritic and layered quartzofeldspathic rocks, mylonite and amphibolite. Faulting and fracturing is common in this area with extensive quartz and disseminated pyrite.

Since the 2006 staking, work performed on the property varied from several unsuccessful attempts being made to locate the old adit opening, to ground prospecting a short distance up Gladwin Creek, thence pan sampling along the southern shoreline of the Thompson River while examining bedrock exposures for the presence of precious metal geology. Though a number of barren quartz veinettes were observed along the area known as Jaws Rapids, panning sampling and sniping along that  $\frac{3}{4}$  kilometre stretch of shoreline netted over three grams of gold and a considerable amount of microscopic nodules of platinum. However, with the primary target being the old June showing, attention during the current fiscal reporting period was focused on prospecting in that general vicinity.

## **Location & Access**

The claim is situate along the South Thompson River, 267 road kilometers (a 3 ½ hour drive) northeast of Vancouver. Kamloops lies 160 kilometers to the east, with Lytton at 9.2 kilometers to the west. Gladwin Creek, a small north-flowing tributary of the Thompson River, extends through the tenure. Accessibility is excellent with BC Highway # 1, the Trans Canada Highway, cutting through the northern portion of the property.

## **Summary & Conclusion**

The party of two conducted reconnaissance prospecting on September 16, 2009, along the traverse indicated on Map 2, hereto attached, commencing at the pull-off area along Hwy #1 immediately adjacent to Gladwin Creek. In following the western bank of the creek, the sheer rock face with numerous exposed quartz veins were again inspected, but more closely, while using detectors to scan for contact mineralogy separating the quartz from the country rock. Though a few locations along the many quartz veins and veinettes rendered weak signals, nothing of significance was discovered there. Following the afore noted course and ascending the slope, talus rocks were inspected, which rendered one interesting specimen that later, when crushed and viewed under microscope, revealed the presence of gold. Other sheer rock face exposures were encountered but unreachable without the proper climbing gear. Talus rocks were inspected along the descent on the western slope and at the base of varied small slide areas - - nothing of interest was encountered. The claim was renewed to offer further exploration.

**Work Evaluation & Cost Statement**

**17.0 Man Hours Prospecting - -**

<b>Labor – Dave Chamberlain</b>	<b>Sep 16, 2009</b>	<b>8.5 hours</b>	<b>\$ 170.00</b>
<b>Super – Larry Amey</b>	<b>Sep 16, 2009</b>	<b>8.5 hours</b>	<b>\$ 255.00</b>
		<hr/>	
		<b>Work Credits</b>	<b>\$ 425.00</b>
<b>Meal Costs .....</b>			<hr/>
			<b>\$ 42.00</b>
		<b>Sub Total</b>	<hr/>
			<b>\$ 467.00</b>
<b>Allowable Vehicle Expenses (20%)</b>			<hr/>
			<b>\$ 93.40</b>
<b>Report Preparation</b>			<hr/>
			<b>\$ 80.00</b>
		<b>Total</b>	<hr/>
			<b>\$ 640.40</b>

**Attending Parties & Qualifications:**

Dave Chamberlain - - 5 years prospecting experience  
Larry Amey - - 30 years prospecting experience

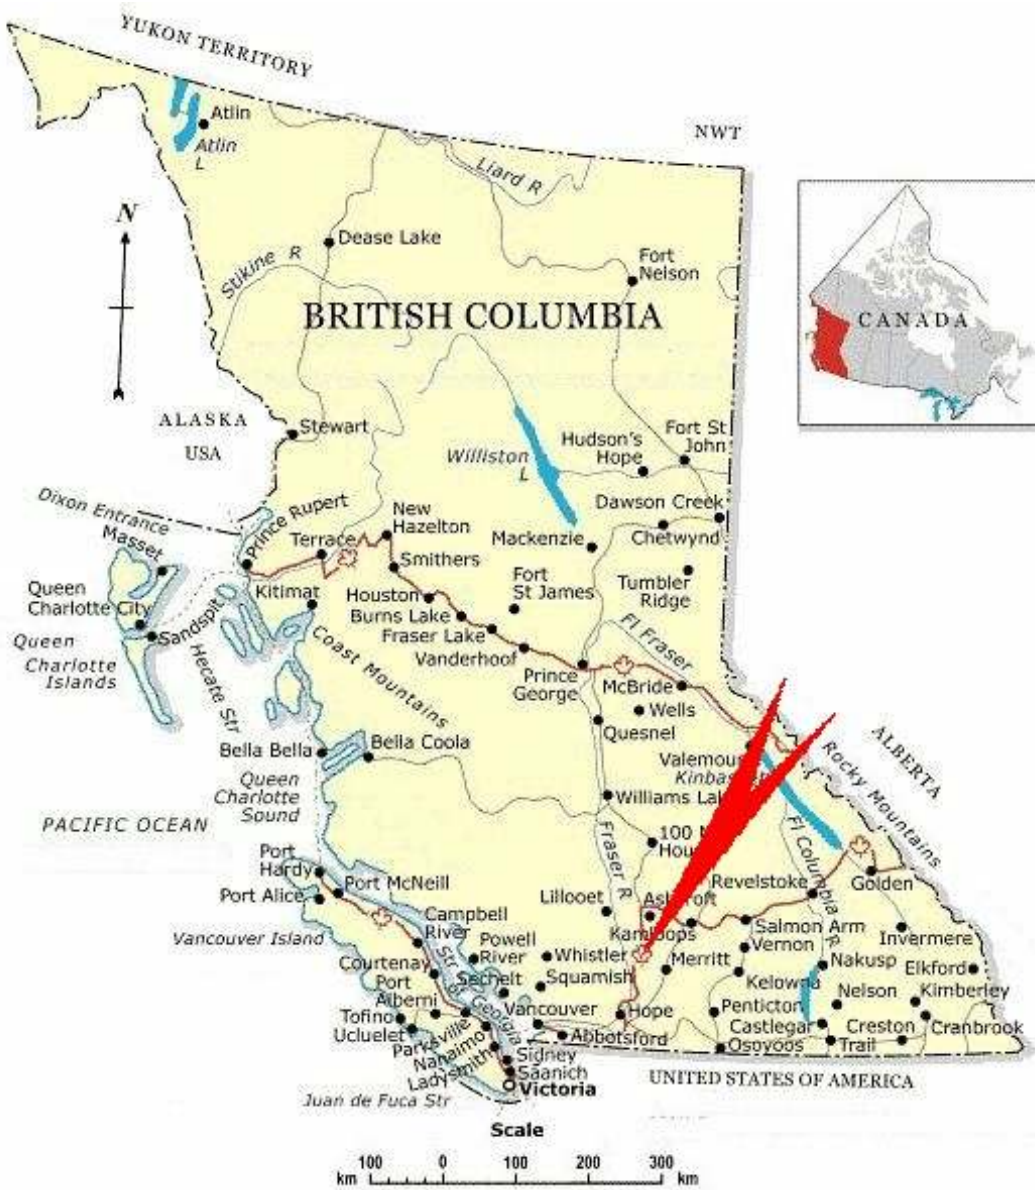

July 20, 2010
