Introduction

The Silver Salam mineral property, # 537127, originally staked as a nine cell tenure, was reduced to a three cell claim comprising 62.84 hectares,. The property was secured to explore the potential for gold and silver. The tenure lies adjacent to the Hozameen Fault, a gold bearing Serpentine structure more commonly known as the Coquihalla Gold Belt. The claim area has received intermittent prospecting over the years, with the more meaningful being that conducted on the Camp 1 and Camp 2 claims by the Carolin Mine Ltd., in the early 1970"s. The Emancipation, of which lies slightly to the west, had also received limited exploration work on a portion of the ground now covered by this property. Previous reports indicate the property could hold good potential for Au and Ag.

The area is underlain by Lower-Middle Jurassic Ladner Group metasediments comprised mainly of fissile argillite, slate, black carbonaceous argillite, and siltstone with some coarser bands. The bedding is parallel to the fissility and locally trends 145 degrees and dips 70 degrees southwest. The argillite hosts disseminated pyrite and pyrrhotite with minor crosscutting sulphide veinlets also comprised of pyrite and pyrrhotite. Quartz veins are common, ranging between 0.3 to 15 centimetres in width. The quartz veins are generally parallel to the fissility and host pyrite, pyrrhotite and arsenopyrite. (MINFILE Record No 092HSW107).

Location & Access

The Silver Salam claim is situate 12 kilometers east-northeast of Hope, BC, north of the confluence of Ladner Creek with the Coquihalla River. Access to the general claim area is gained via BC Highway #5 (the Coquihalla Highway), which leads northeast from Hope toward Merritt, BC. The claim may be easily accessed from the Carolin Mine Exit on Hwy 5, via the gravel road extending upstream on the Coquihalla River, then up along Ladner Creek from its mergence with the Coq, thence along a newly built rough dozed roadway put in during recent Fisheries' work on Ladner Creek just downstream from the old trestle.

Summary & Conclusion

Work on the Silver Salam property was conducted over two dates – both of which are shown with the areas prospected, on Map 2, hereto attached. The September 17, 2009 work was comprised of sampling the gravels along the area noted, for showings of precious metals. The July 13, 2010 segment comprised of reconnaissance prospecting along the traverse also noted on Map 2. While a few outcrops held quartz showings with pyrite, upon close examination, they failed to reveal visible presence of gold. Though nothing significant was derived from either effort, the claim was renewed to offer one final fiscal for prospecting. Pending future lack of favorable results, the property is intended to then be dropped.

Work Evaluation & Cost Statement

Three-Part Prospecting Program

14.0 Man Hours Prospecting

Sep 17, 2009

Labor – Dave Chamberlain Supervisory –	4.00 hours	\$	80.00
Larry Amey	4.00 hours	\$	120.00
July 13, 2010			
Labor – Larry Amey	6.00 hours	\$	120.00
Meal Costs	Sub Total	<u>\$</u>	34.00 354.00
Allowable Vehicle Expenses (20%)		\$	70.80
Report Preparation		\$	80.00
	Total	\$	504.80

Attending Parties & Qualifications:

Dave Chamberlain -- 5 years prospecting experience Larry Amey -- 30 years prospecting experience
