(1) Introduction and Terms of Reference

Serengeti Resources Inc. (Serengeti) acquired the Valleau claims by staking in January of 2005. The property lies in the prospective Quesnel Trough, 75 km northwest of the Mt. Milligan deposit and 18 km east of the Kwanika deposit. In order to further refine Cu+/-Au porphyry targets on the property, Serengeti financed a \$19,451 geochemical reconnaissance program (Appendix A). On August 4th and 5th, 2009, a field crew working for Serengeti visited the Valleau property and collected 138 MMI soil samples and 137 B-Horizon soil samples.

(2) Property Description and Location

The Valleau property is 100% owned by Serengeti Resources Inc. It is located in the Omineca Mining Division of north-central British Columbia, Canada, 130 km NNW of Fort St James, at 55° 28' north latitude and 125° 1' west longitude (Figure 1). The 13 contiguous mineral claims which comprise the Valleau property cover an area of 5171 hectares (Figure 2). Additional information regarding the individual claims can be referenced in Table 1.

(3) Accessibility, Local Resources, Infrastructure, Climate and Physiography

The property is located approximately 75 km northwest of the Mt. Milligan deposit, owned by Terrane Metals and 18 km east of Serengeti's Kwanika deposit. Access to the Valneau property can be obtained via helicopter from Fort St James (130 km to the south) or from Kwanika Camp.

The climate of region is typical of middle latitudes in Canada as the winters are cold (-5 to -25 deg Celsius) and summers are warm (20-25 degrees Celsius). Precipitation is moderate as nearby Fort St James receives an average of 47.5 cm of precipitation per year. The property is mostly covered by glacial till, with gentle slopes, and elevations varying from about 1,250 m to 1700 m. It is everywhere forested except for meadows in the valleys and upland creeks. The vegetation on the property is best characterized by the presence of pine and fir forests with swampy grasslands occurring in low-lying areas.

(4) History

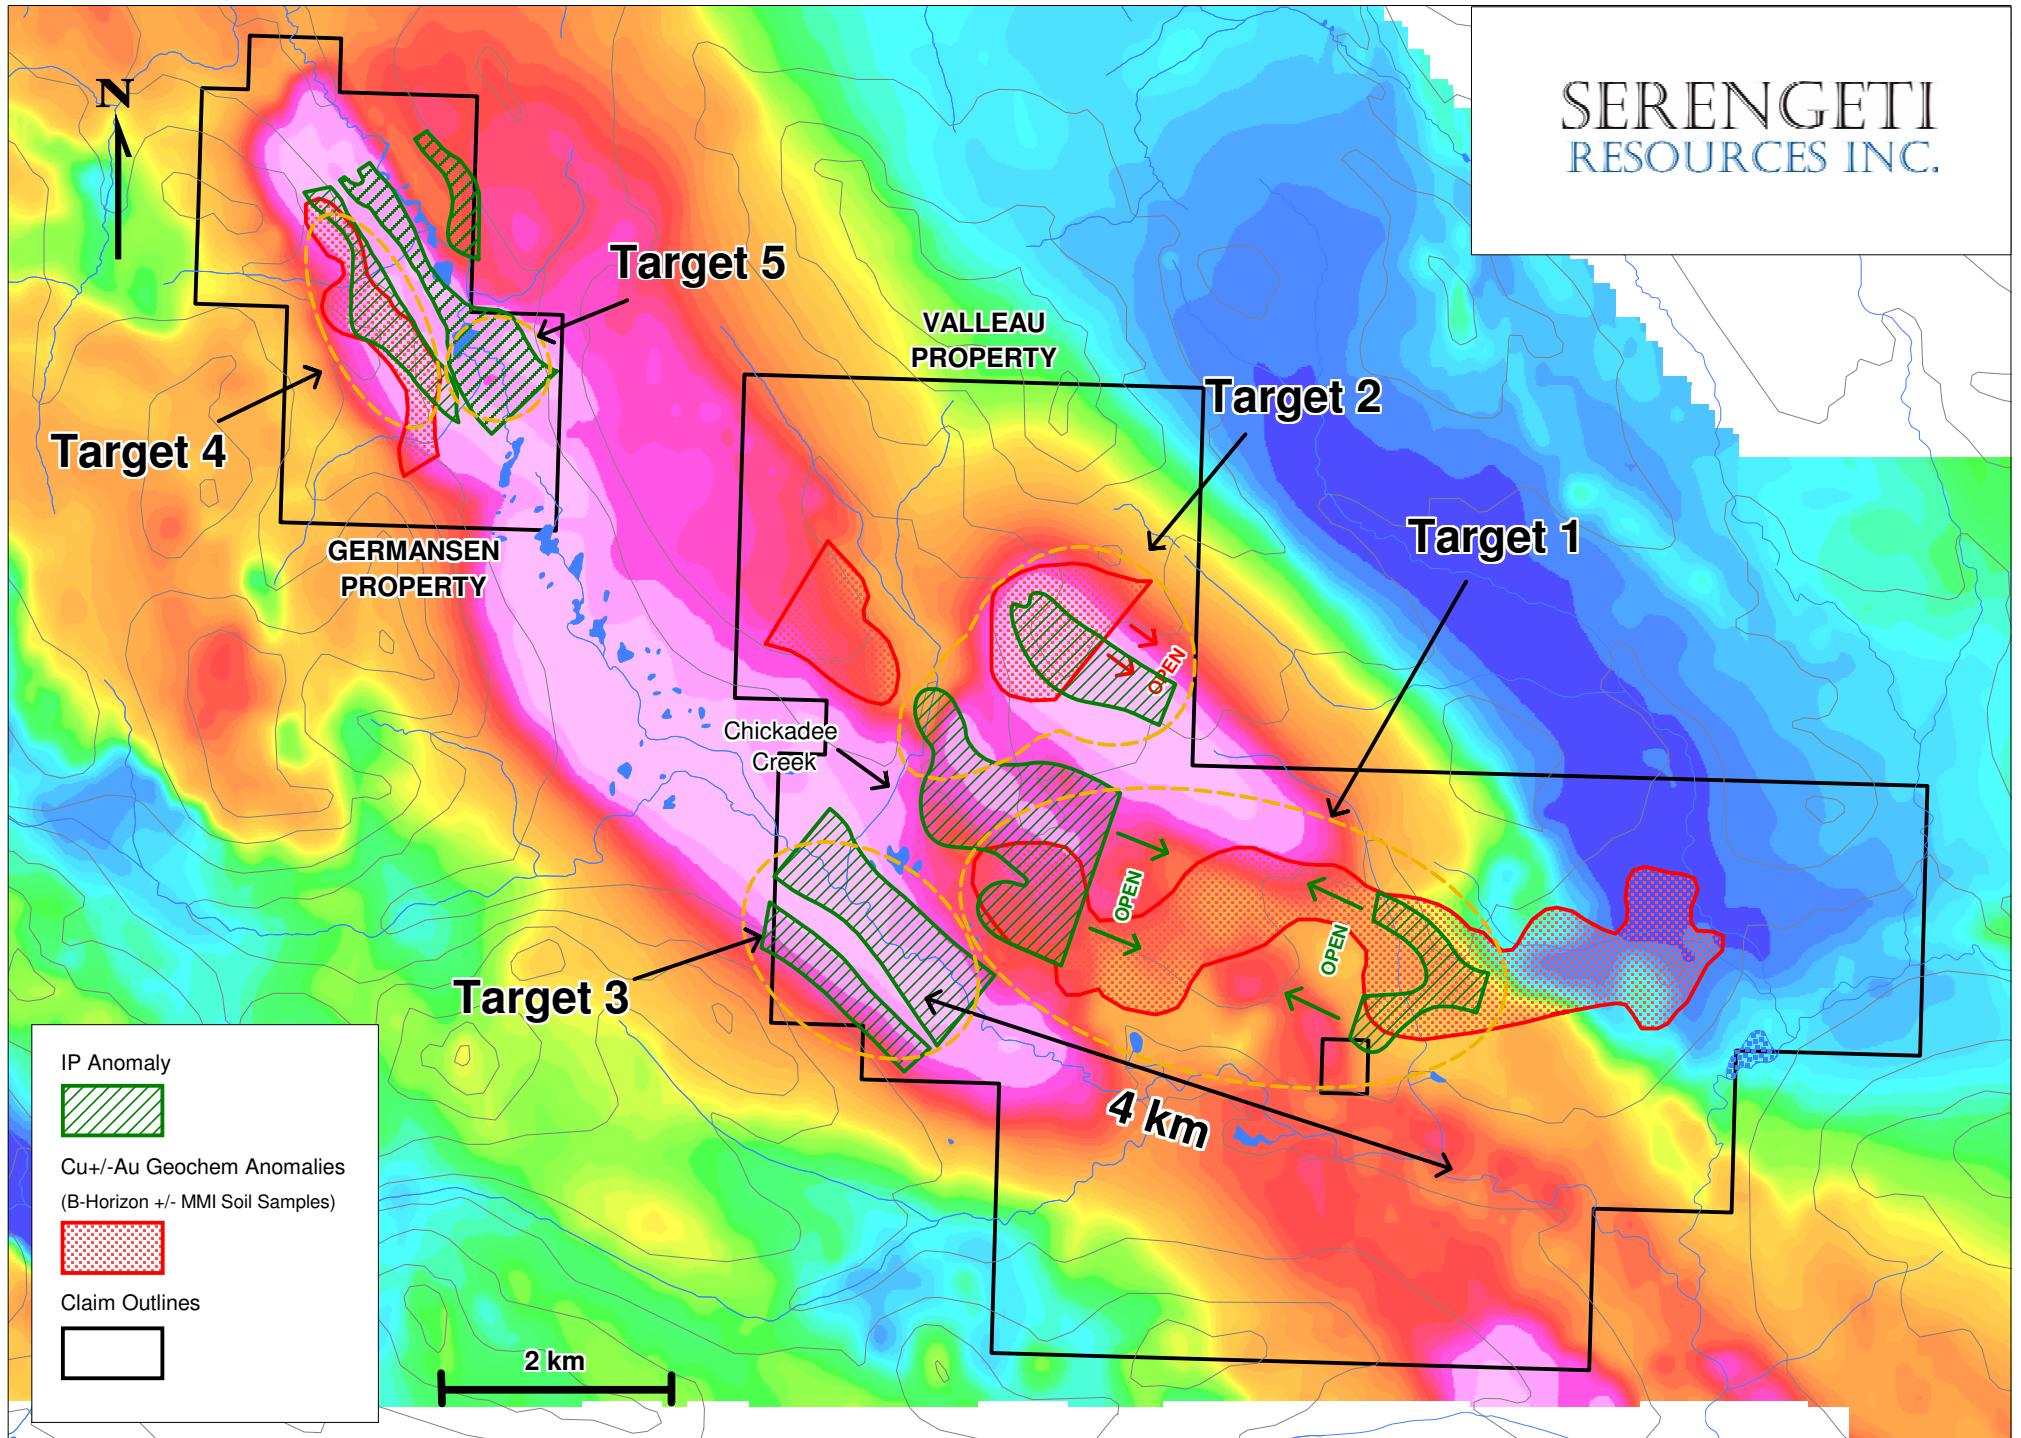

Mineral exploration in the Omineca district began with placer gold prospecting as far back as 1869 and with copper exploration commencing in 1969. In 1989, Westmin Resources acquired a large property, including the ground previously held by Noranda Exploration, and did an airborne magnetic/EM survey followed by stream sediment sampling, soil sampling, trenching and gradient IP surveys (assessment reports 19868, 20897, 21866, 22752 and 22757). This work identified three placer gold occurrences and extensive copper and gold soil anomalies in an essentially a glacial till cover area. Results of the trenching program were not recorded and no drilling has been done on the property.

Serengeti acquired the Valneau property by staking in January of 2005. At this time, Serengeti also acquired the Germanson property, located 2 km to the southeast. The two properties occur along a pronounced northwest trending, regional magnetic and stream geochemical anomaly. In 2005, Serengeti in conjunction with the GSC conducted some 530 line kilometres of heliborne magnetic and radiometric surveying. In 2007, Serengeti financed a 13 line (26.9 line-km) IP and ground magentic survey. The survey utilized pole-dipole array with a spacing of 50 m and identified several chargeability +/- resistivity anomalies (see AR29766).

The results of previous work on the Valneau property has identified three primary targets consisting of anomalous gold and copper values in stream sediment and soils, co-incident with open ended Induced Polarization (IP) chargeability anomalies (Figure 3 – compilation map of targets on the Germansen-Valneau trend).

Target 1 consists of an approximately 6,000 m long by 200 m to 800 m wide east/west trending gold soil anomaly with three areas of strongly elevated gold values. This work showed an 800 m long by 300 m wide zone of greater than 100 ppb Au with trenches reportedly encountering propylitically altered monzonite and diorite with minor pyrite and chalcopyrite. Six

Germansen-Valleau Project - Target Areas on Airborne Magnetics

trenches were completed by prior operators with the best gold grade 1,080 ppb/10 m. IP surveying completed by Serengeti identified open ended chargeability anomalies at either end of the Au in-soil anomalies, leaving an obvious gap for follow up testing. If the IP anomalies coalesce, the target would measure 5 km x 2.5 km, consisting of co-incident geochemical anomalies and high chargeability. Interestingly, the gap in the IP anomaly is coincident with a roughly circular magnetic low, possibly representing a magnetite destructive alteration zone.

Target 2 consists of anomalous gold values (16 ppb to 640 ppb) and moderately anomalous copper values (81 ppm to 124 ppm) in stream sediment samples in an area 2,500 m by 1,000 m. Follow-up soil sampling identified an area measuring +2,200 m by 1,000 m of anomalous copper values (81 ppm to 969 ppm) with patchy anomalous gold values. Outcrop is poor but pyritic andesite with minor chalcopyrite is noted in outcrops along Robin Creek, a tributary of Chickadee Creek. **Of significance is that coarse, angular grains of gold have been panned from Chickadee Creek suggesting a nearby source.** This target occurs at the edge of a strong aeromagnetic anomaly and is coincident in part with a northwest trending chargeability high.

Target 3 is a +2 km x 2.5 km, valley bottom (ie. covered) IP anomaly. This anomaly is open to the northwest and may coalesce with Target 5 on the Germansen property.

(5) Geology

Regional Geology

The Germansen property lies in the northern part of the Upper Triassic to Lower Jurassic Quesnel Trough – Quesnellia Terrane –, a Mesozoic island arc terrane juxtaposed against the ancestral North American continental margin. The Quesnel Trough is bounded on the west by older rocks of the Cache Creek Terrane across the Pinchi Fault, and to the east across the Manson Fault by the Slide Mountain Terrane. It hosts numerous alkalic porphyry copper-gold deposits, from southern to northern B.C. The deposits in this region of the Quesnel Trough area are associated with potassically altered diorite to syenite plugs and stocks and coeval andesitic, volcanic rocks, mainly along the flanks of the Hogem batholith. The significant porphyry deposits in the general Germansen-Valleau area (Kemess mine and the Mt.Milligan, Kwanika and Lorraine deposits) are associated with strong, airborne magnetic anomalies, especially northwest cross trends, and large copper/gold stream sediment anomalies with both of these features present at the Valleau property.

In the Valleau project area, the geology consists of Upper Triassic and Lower Jurassic island arc volcanic and sedimentary units of the Takla Group, and the Chuchi Lake and Twin Creek successions. These units have been extensively affected by intrusions of the Hogem plutonic suite, comprised of late Triassic and early Jurassic composite plutons – the intrusive equivalent of the island arc volcanic units, and the Valleau Creek intrusive suite -diorite, gabbro, pyroxenite and hornblendite rocks – which occurs along the eastern margin of the Hogem Batholith.

Property Geology

Outcrop exposures on the Valleau property are limited to higher elevations on the north eastern portion of the property. The vast majority of the property geology is obscured by glacial till. Glacial features such as eskers, drumlins, erratics and hummocks occupy the low lands adjacent to the wide creek traversing the middle of the property. Small outcrops of propylitically and potassically altered diorite and monzonite with pyrite, chalcopyrite and malachite have been reported in the areas associated with large soil anomalies for copper and gold.

An excavated trail and several trenches exist on the northern side of the valley. Rocks observed from the trenches are predominantly very fine grained andesite and diorite. The majority of rocks observed on the Valleau property by Serengeti staff in 2009 were and fresh to weakly altered dioritic intrusives. Andesite porphyry volcanic rock occurs locally in some of the old trenches and scattered outcrops in the northwest portion of the property. Due to the extensive glacial cover, a coherent geological picture has been difficult to obtain.

(6) Sample Collection Methodology

In order to test for the geochemical signature of a covered mineral deposit, a total of 138 mobile metal ion (MMI) soil samples and 137 “B” horizon soil samples were collected from the Valleau property. One of each sample type was collected at 100 m spaced intervals along the measured and staked lines that were used for a June 2008 geophysical Induced Polarization (IP) survey.

“B” Horizon Sample Collection

“B” horizon samples were collected at each station at a depth of 15-45 cm. The overlying organics and/or “A” horizon were penetrated until a reddish-brown to brown, true “B” horizon was clearly encountered. Samplers collected ~500 g of the soil in a brown Kraft sample bag. Samples were then clearly labeled, identified by the IP station at which they were collected. Each station was located with the use of a handheld GPS.

MMI Sample Collection

MMI samples were collected by geologists and field technicians in accordance with guidelines for MMI sampling set out by SGS Laboratories. The procedure was as follows: Prior to collecting the MMI samples, sampling equipment was brushed to eliminate residue from previous samples and was flushed with soils from the new sample area. Extensive organic horizon (O or Ao) was scraped away and loose non-decomposed matter, debris, and any possible cultural contamination was eliminated. The leaf litter and organic material that still has structure (i.e. decomposing leaves, bark, twigs and peat) was then penetrated. Once through to a true A-horizon (where the soil resembles a decomposed mass without any obvious leaf or vegetation visible), the top 10cm of this A-horizon material was discarded. The sample was then collected between the 10 to 25 cm interval below this horizon. A plastic trowel was used take a cross section of the material between the 10 to 25 cm depth interval. The sample material was put into clean, properly labeled plastic bags. Approximately 300 to 500 grams of material was collected.

Samplers ensured not to mix organic and inorganic soils in the collected sample. In the event of encountering greater than 25 cm of organics, no sample was collected. The soil type, topography and moisture content of soil was recorded for future interpretation. During sample collection and handling, no jewellery (watches, rings, bracelets, and chains) were worn so as to avoid potential contamination. Analytical analysis of the MMI samples was confined to Cu, Au, Mo, Ag, Zn, Pb, Cd, and As as these elements are most commonly associated with Cu ± Au+Mo deposits and/or define their peripheral signature.

The common practice for interpreting MMI assay results is by the calculation of a response ratio (RR). The response ratio is the normalization of the data relative to local geochemical background. The background value is calculated by averaging the first quartile of data, and then by dividing all the results by the average of the first quartile. This method will give a response ratio, relative to the geochemical background.

Sample Shipment and Analysis

All of the “B” horizon and MMI samples were packaged by the field staff on site and shipped via a local expediting company to SGS in Toronto, Ontario. All “B” soil samples were dried and -80 mesh screened. They were then analyzed by 30 element ICP following digestion in aqua regia. SGS analyzed the samples using their proprietary MMI selective leach method.

Analytical results for all samples collected are shown in the Certificated of Analysis in Appendix D.

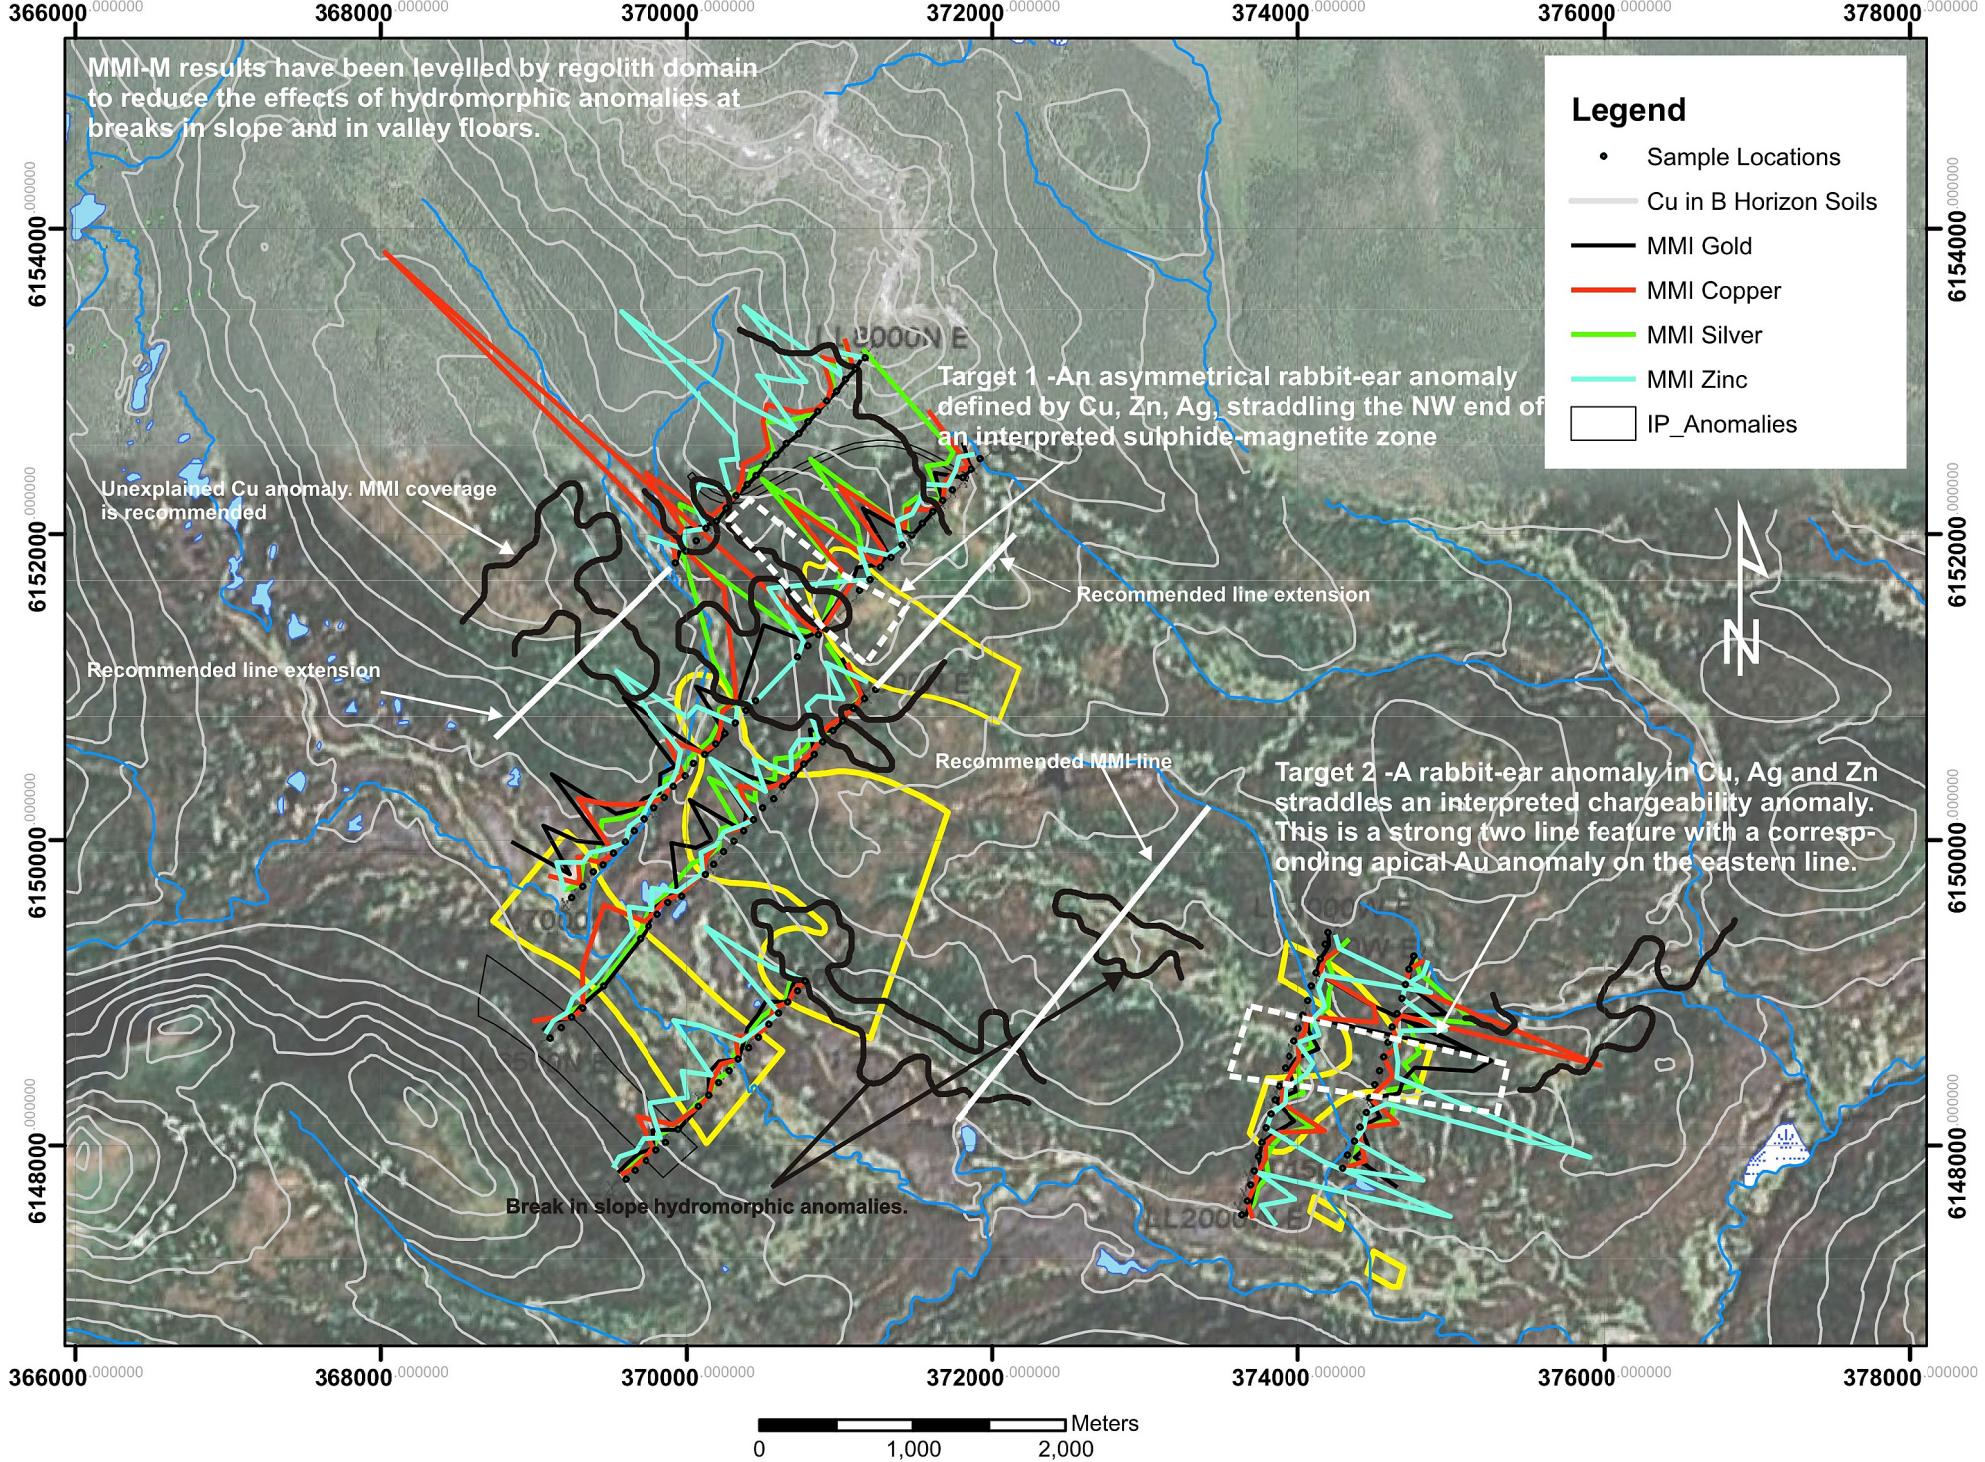

(7) Results

A review of the MMI and B-Horizon sampling results was completed by Dave Heberlein (Consulting Geologist, M.Sc, P.Geo). The first step of the review was to level the data in order to suppress false anomalies. Levelling was done by first classifying each sample point on the basis of its topographic setting. Four categories were employed: valley floor, break in slope, slope and hill top. Response ratios were then calculated by determining of the median for the lower quartile of each category and then dividing each value by this value. After consulting with Serengeti Geologists and incorporating the results of previous exploration, D. Heberlein authored the following report:

Results from Valneau are illustrated in Figure 4. There are some compelling Cu and Au geochemical anomalies that are apparent in the data. Data levelling has significantly improved the resolution of the MMI results by suppressing the hydromorphic anomalies. Two areas of interest referred to as Targets 1 and 2 on Figure 4 emerge from the data. Target 1 is located at the north end of the grid on lines 7000N and 8000NE. It consists of an asymmetric rabbit ear anomaly for copper and silver, bracketing what has been interpreted from geophysics as a sulphide magnetite bearing zone. The feature remains open to the southeast and an extension of line 6500NE is recommended to detail the feature over the centre of the geophysical anomaly. It is associated with anomalous copper values from both the 2009 and a previous B-horizon soil survey. It appears to be weakening to the northwest.

Target 2 lies in the south-eastern part of the survey area on lines 2000E and 1500E. It comprises a two-line multi-element anomaly with a distinct rabbit-ear form. Rabbit-ear responses for copper, zinc and silver bracket an apical gold response, which is strongest on line 1500E. A chargeability feature coincides with the axis of the MMI anomaly, suggesting the presence of sulphides. There is also a copper anomaly from historical B-horizon soils that extends approximately 1 km east of the target. Additional MMI lines to the east and west are recommended to fully evaluate the size of the target and to determine the best area for follow up.

Other features of interest include two hydromorphic copper anomalies defined in the B-horizon soil data between the two MMI survey areas. These features occur at breaks in slope on the north and south flanks of a low hill and suggest a copper source somewhere on the higher ground. This feature may constitute a westerly extension of Target 2 and if so would increase its potential strike length to several kilometres. An MMI line is recommended across the hill to assess this area. MMI responses over the chargeability anomalies south of Target 1 are ambiguous. Apical type responses for copper and zinc seem to correlate with valley floor and breaks in slope suggesting a hydromorphic origin. There is possible rabbit ear response at the southern end of line 7000N. This is defined primarily by gold but also has a weak copper response. The axis of this feature is situated in a creek bed, which makes the interpretation of the MMI less certain. The fact that the feature falls between two chargeability anomalies downgrades its potential somewhat. Nevertheless, an investigation of the geology in that area could provide evidence to elevate this to target status.

Valleau Property
Geochemical Interpretation

Dave Heberlein October, 2009

(8) Summary and Recommendations

The 2009 MMI and B Horizon sampling program identified three target areas on the Valleau property that warrant follow up:

The first target (Target 1) is located at the north end of the grid on lines 7000N and 8000NE. It consists of an asymmetric rabbit ear anomaly for copper and silver, bracketing an interpreted sulphide-magnetite geophysical anomaly. The feature remains open to the southeast towards line 6500NE.

The second target (Target 2) lies in the south-eastern part of the survey area on lines 2000E and 1500E. It comprises a two-line multi-element anomaly with distinct rabbit-ear responses for copper, zinc and silver bracketing an apical gold response. A chargeability feature coincides with the axis of the MMI anomaly, suggesting the presence of sulphides. There is also a copper anomaly from historical B-horizon soils that extends approximately 1 km east of the target.

A third area of interest is defined by the two hydromorphic copper anomalies defined in the B-horizon soil data between the geophysical coverage and MMI survey areas. The B-Horizon anomalies occur at breaks in slope on the north and south flanks of a low hill and suggest a copper source somewhere on the higher ground. This feature may constitute a westerly extension of Target 2 and if so would increase its potential strike length to several kilometres.

It is recommended that:

- i) Target 1- MMI soil lines should be extended on line 6500NE in order to detail the feature identified over the centre of the geophysical anomaly.
- ii) Target 2 - Additional MMI lines to the east and west are recommended to fully evaluate the size of the target and to determine the best area for follow up.
- iii) Third target area - An MMI line is recommended across the hill to assess the area between IP and MMI coverage. Positive results from MMI surveying should be followed up by infill IP surveying.
- iv) Wide-spaced drill testing should be employed to follow-up the numerous geochemical and geophysical targets on the property.

Appendix A – Expenditure Statement

Valleau Property - 2009 Geochemical Survey Cost Statement

Crew Costs:

Helicopter	flight time	\$ 5,480.00
Sample shipment		\$ 45.00
Field Geologist	2 days	\$ 1,580.00
Sampler 1-4 and gear	3 days @\$250/day	\$ 3,000.00
Room and board		\$ 715.50

Analysis:

MMI Analysis	138 Samples	\$ 3,675.00
B-Horizon Analysis	137 Samples	\$ 2,719.40

Project Planning:

Sr. Geologist	(Salary portion)	\$ 546.81

\$ 19,451.01

Appendix B – Geologist's Certificate

GEOLOGIST'S CERTIFICATE

I, Hugh R. Samson of #205-1875 West 8th Avenue, Vancouver, in the province of British Columbia, DO HEREBY CERTIFY:

1. THAT I am Serengeti Resources Inc.'s Project Geologist.
2. THAT I am a 2005 graduate of Dalhousie University with an Honours BSc.
3. THAT I have practised in the field of Geosciences since my graduation from University.
4. THAT this report is based on fieldwork carried out from August 4th – 5th, 2009, by geological staff and personnel on behalf of Serengeti Resources Inc
5. THAT this report was written by myself under the supervision and direction of David W. Moore, President and CEO of Serengeti Resources Inc. and a Professional Geoscientist (P. Geo) registered and in good standing with the Association of Professional Engineers and Geoscientists of the Province of British Columbia (#28163).

DATED at Vancouver, British Columbia this 12th day of October, 2010.

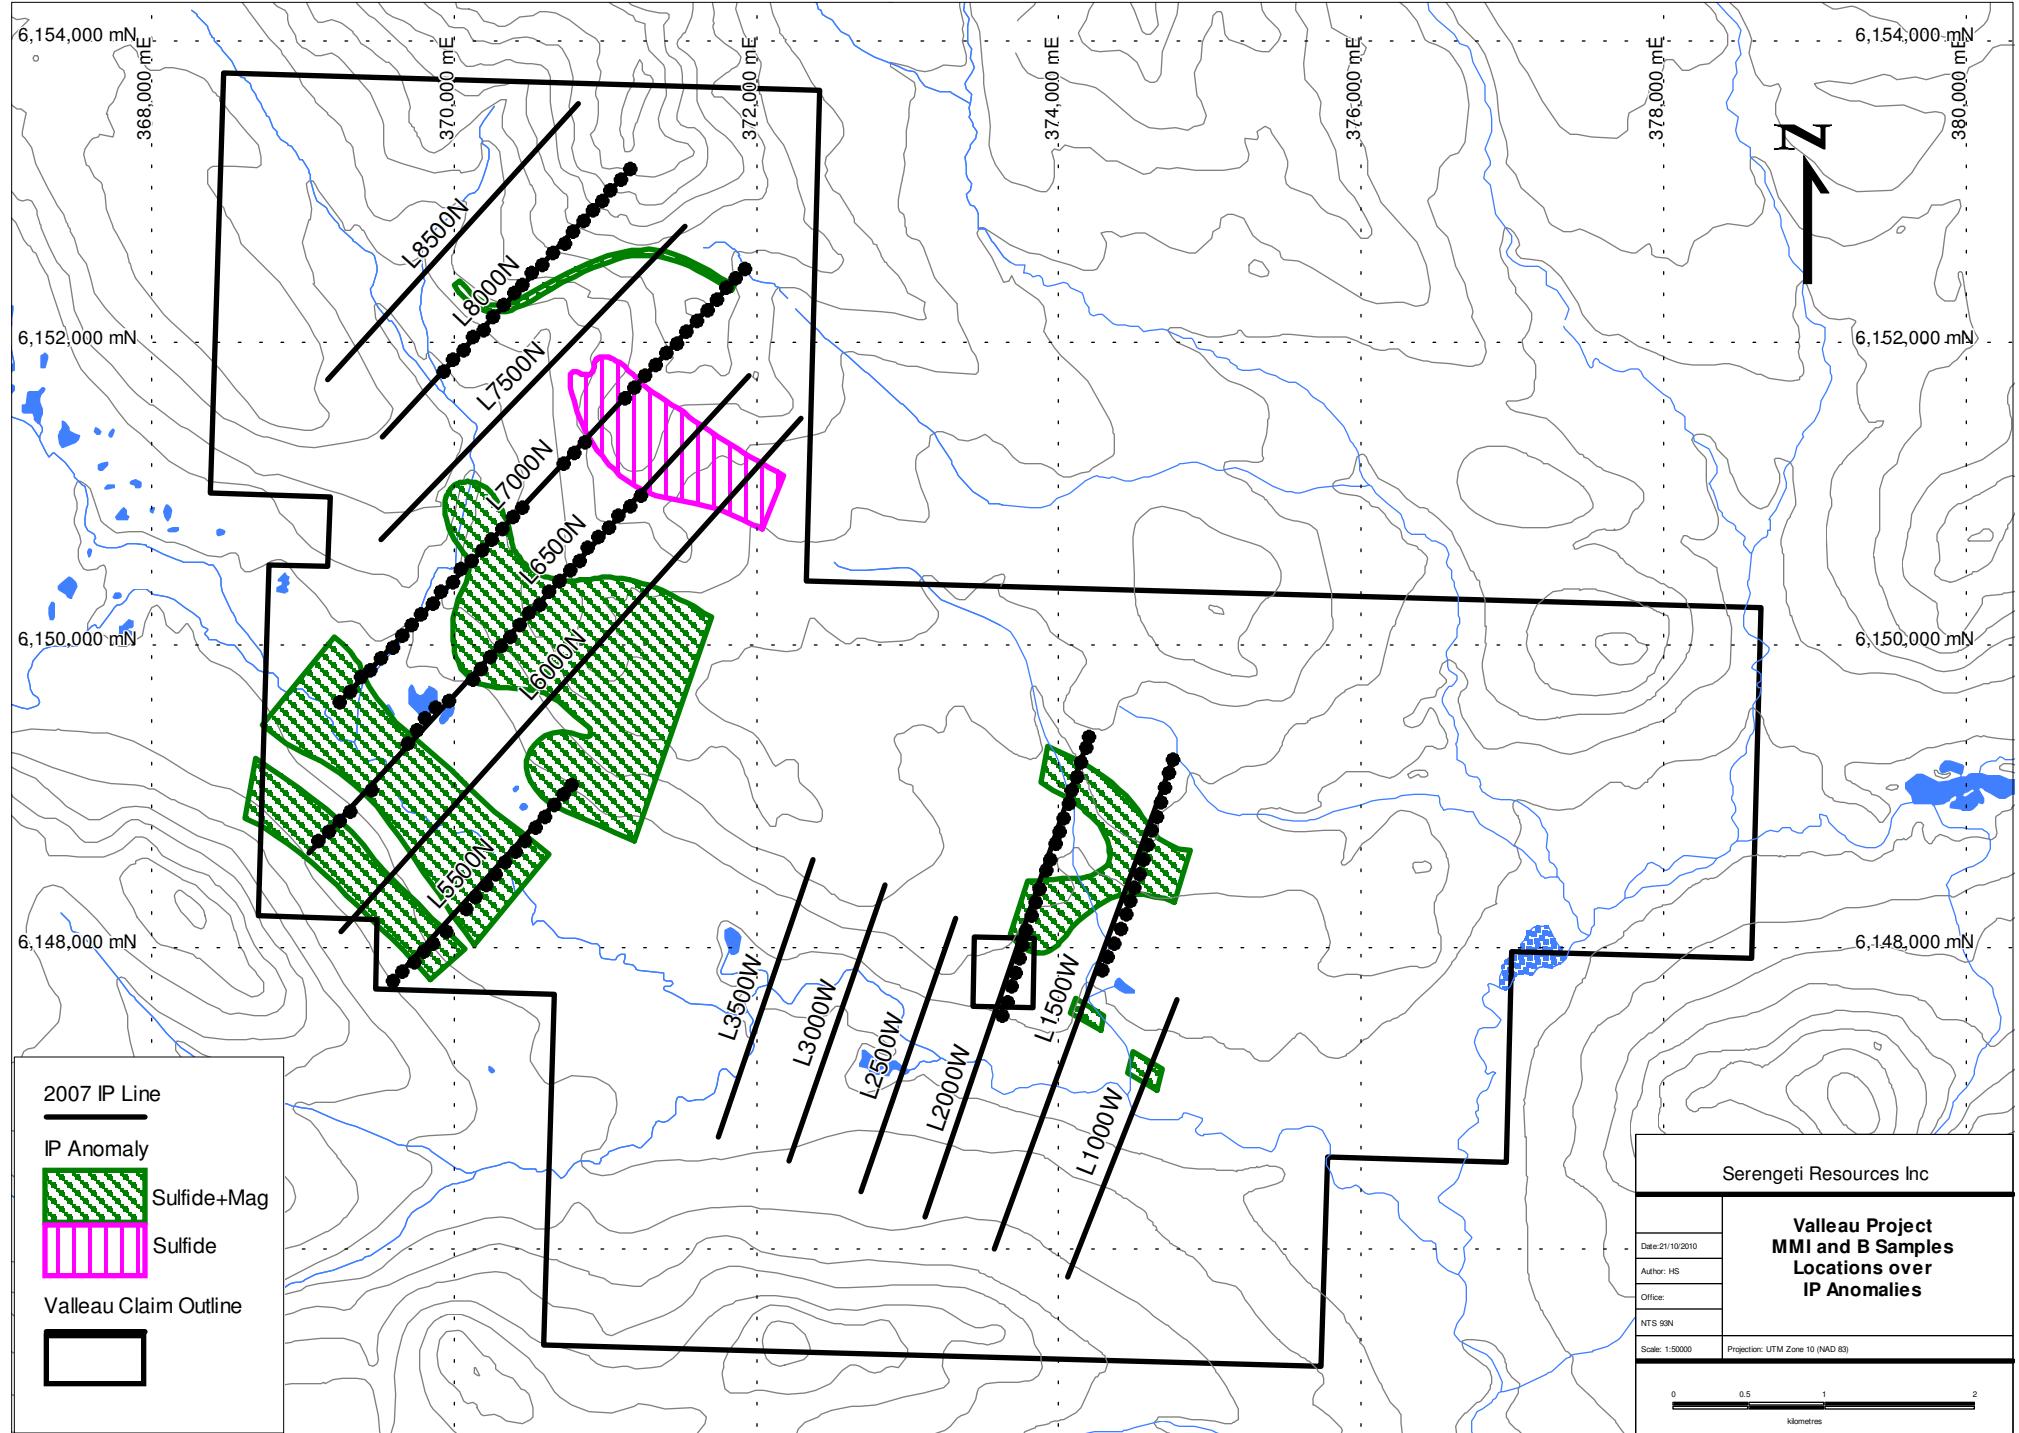

Hugh R. Samson, BSc

David W. Moore, P. Geo

Appendix D – Analytical Certificates and Procedures

MMI - M : The Determination of Mobile Metal Ions (MMI) of Cu, Pb, Zn, Cd, Au, Ag, Pd, Co, Ni, U, Nb, Rb, Y, Ba, La, Ta, Ce, Pr, Nd, Sm, Gd, Tb, Er, Yb, Ti, Zr, Ca, Mg, Sr, Al, Sc, Th, Li, Fe, As, Sb, Sn, Bi, Tl, W, Sn, Mo, Te by partial extraction and ICP-MS.

1. Parameter(s) measured, unit(s):

Silver(Ag); Gold (Au); Barium (Ba); Bismuth (Bi); Calcium (Ca); Cadmium (Cd); Cerium (Ce); Copper (Cu); Cobalt (Co); Dysprosium (Dy); Erbium (Er); Europium (Eu); Gadolinium (Gd); Lanthanum (La); Magnesium (Mg), Molybdenum (Mo); Niobium (Nb); Neodymium (Nd); Nickel (Ni); Lead (Pb); Palladium (Pd); Praseodymium (Pr); Rubidium (Rb); Antimony (Sb); Samarium (Sm); Tin (Sn); Strontium (Sr); Tellurium (Te); Thorium (Th); Titanium (Ti); Thallium (Tl); Uranium (U); Tungsten (W); Yttrium (Y); Ytterbium (Yb); Zinc (Zn) and Zirconium (Zr) by partial extraction and ICP-MS. ppb

2. Typical sample size:

50 g

3. Type of sample applicable (media):

Soils

4. Sample preparation technique used:

Mobile metal ions present in soil samples are partially extracted using a concentrated MMI –M solution.

5. Method of analysis used:

The extracted sample solution is aspirated into the inductively coupled plasma Mass Spectrometer (ICP-MS) where the ions are measured and quantified according to their unique mass.

6. Data reduction by:

The results are exported via computer, on line, data fed to the Laboratory Information Management System (LIMS CCLAS EL) with secure audit trail.

7. Figures of Merit:

Element	Limit of Quantification (LOQ) ppb	Element	LOQ ppb	Element	(LOQ) ppb	Element	(LOQ) ppb
Ag	1.0	Er	0.5	Pd2	1.0	Tl	0.5
As	10	Eu	0.5	Pr	1.0	U	1.0
Au	0.1	Gd	1.0	Rb	5.0	W	1.0
Ba	10	La	1.0	Sb	1.0	Y	5.0
Bi	1.0	Mg	1.0 (ppm)	Sm	1.0	Yb	1.0
Ca	10 (ppm)	Mo	5.0	Sn	1.0	Zn	20
Cd	10	Nb	0.5	Sr	10	Zr	5.0
Ce	5.0	Nd	1.0	Te	10		
Co	5.0	Ni	5.0	Th	0.5		
Cu	10	Pb	10	Ti	3.0		
Dy	1.0	Pd	1.0	Ti2	3.0		

8. Quality control:

The ICP-MS is calibrated with each work order. An instrument blank and calibration check is analyzed with each run. One preparation blank and reference material is analyzed every 46 samples, one duplicate every 12 samples.

All QC samples are verified using LIMS. The acceptance criteria are statistically controlled and control charts are used to monitor accuracy and precision. Data that falls outside the control limits is investigated and repeated as necessary.

SGS Minerals Services

Toronto Laboratory

1885 Leslie Street, Toronto, ON M3B 2M3

Member of SGS Group (Société Générale de Surveillance)

Certificate of Analysis

Work Order: TO107240

To: Dave Moore
Serengeti Resources
500-602 West Hastings St.
VANCOUVER
BC V6B 1P2

Date: Sep 24, 2009

P.O. No. : Project: Valleau West
Project No. : -
No. Of Samples : 72
Date Submitted : Aug 21, 2009
Report Comprises : Pages 1 to 3
(Inclusive of Cover Sheet)

Distribution of unused material:

Discard after 90 days: 72 Soils

Certified By :

Gavin McGill
Operations Manager

SGS Minerals Services (Toronto) is accredited by Standards Council of Canada (SCC) and conforms to the requirements of ISO/IEC 17025 for specific tests as indicated on the scope of accreditation to be found at <http://www.scc.ca/en/programs/lab/mineral.shtml>

Report Footer:

L.N.R. = Listed not received
n.a. = Not applicable

I.S. = Insufficient Sample
-- = No result

*INF = Composition of this sample makes detection impossible by this method

M after a result denotes ppb to ppm conversion, % denotes ppm to % conversion

Methods marked with an asterisk (e.g. *NAA08V) were subcontracted

Methods marked with the @ symbol (e.g. @AAS21E) denote accredited tests

This document is issued by the Company under its General Conditions of Service accessible at http://www.sgs.com/terms_and_conditions.htm. Attention is drawn to the limitation of liability, indemnification and jurisdiction issues defined therein.

WARNING: The sample(s) to which the findings recorded herein (the "Findings") relate was (were) drawn and / or provided by the Client or by a third party acting at the Client's direction. The Findings constitute no warranty of the sample's representativity of the goods and strictly relate to the sample(s). The Company accepts no liability with regard to the origin or source from which the sample(s) is/are said to be extracted. The findings report on the samples provided by the client and are not intended for commercial or contractual settlement purposes. Any unauthorized alteration, forgery or falsification of the content or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law.

This document is issued by the Company under its General Conditions of Service accessible at http://www.sgs.com/terms_and_conditions.htm. Attention is drawn to the limitation of liability, indemnification and jurisdiction issues defined therein.

WARNING: The sample(s) to which the findings recorded herein (the "Findings") relate was (were) drawn and / or provided by the Client or by a third party acting at the Client's direction. The Findings constitute no warranty of the sample's representativity of the goods and strictly relate to the sample(s). The Company accepts no liability with regard to the origin or source from which the sample(s) is/are said to be extracted. The findings report on the samples provided by the client and are not intended for commercial or contractual settlement purposes. Any unauthorized alteration, forgery or falsification of the content or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law.

This document is issued by the Company under its General Conditions of Service accessible at http://www.sgs.com/terms_and_conditions.htm. Attention is drawn to the limitation of liability, indemnification and jurisdiction issues defined therein.

WARNING: The sample(s) to which the findings recorded herein (the "Findings") relate was (were) drawn and / or provided by the Client or by a third party acting at the Client's direction. The Findings constitute no warranty of the sample's representativity of the goods and strictly relate to the sample(s). The Company accepts no liability with regard to the origin or source from which the sample(s) is/are said to be extracted. The findings report on the samples provided by the client and are not intended for commercial or contractual settlement purposes. Any unauthorized alteration, forgery or falsification of the content or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law.

This document is issued by the Company under its General Conditions of Service accessible at http://www.sgs.com/terms_and_conditions.htm. Attention is drawn to the limitation of liability, indemnification and jurisdiction issues defined therein.

WARNING: The sample(s) to which the findings recorded herein (the "Findings") relate was (were) drawn and / or provided by the Client or by a third party acting at the Client's direction. The Findings constitute no warranty of the sample's representativity of the goods and strictly relate to the sample(s). The Company accepts no liability with regard to the origin or source from which the sample(s) is/are said to be extracted. The findings report on the samples provided by the client and are not intended for commercial or contractual settlement purposes. Any unauthorized alteration, forgery or falsification of the content or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law.

Work Order: TO108027

To: **Dave Moore**
Serengeti Resources
500-602 West Hastings St.
VANCOUVER
BC V6B 1P2

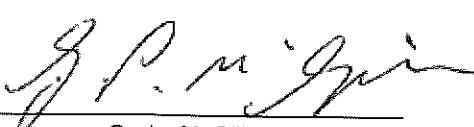

Date: Dec 17, 2009

P.O. No. : Project: Valleau North; POH TO107241
Project No. : -
No. Of Samples : 71
Date Submitted : Oct 16, 2009
Report Comprises : Pages 1 to 9
(Inclusive of Cover Sheet)

Distribution of unused material:

Discard after 90 days:

Certified By :

Gavin McGill
Operations Manager

SGS Minerals Services (Toronto) is accredited by Standards Council of Canada (SCC) and conforms to the requirements of ISO/IEC 17025 for specific tests as indicated on the scope of accreditation to be found at <http://www.scc.ca/en/programs/lab/mineral.shtml>

Report Footer: L.N.R. = Listed not received I.S. = Insufficient Sample
n.a. = Not applicable -- = No result

*INF = Composition of this sample makes detection impossible by this method

M after a result denotes ppb to ppm conversion, % denotes ppm to % conversion

Methods marked with an asterisk (e.g. *NAA08V) were subcontracted

Methods marked with the @ symbol (e.g. @AAS21E) denote accredited tests

This document is issued by the Company under its General Conditions of Service accessible at http://www.sgs.com/terms_and_conditions.htm. Attention is drawn to the limitation of liability, indemnification and jurisdiction issues defined therein.

WARNING: The sample(s) to which the findings recorded herein (the "Findings") relate was (were) drawn and / or provided by the Client or by a third party acting at the Client's direction. The Findings constitute no warranty of the sample's representativity of the goods and strictly relate to the sample(s). The Company accepts no liability with regard to the origin or source from which the sample(s) is/are said to be extracted. The findings report on the samples provided by the client and are not intended for commercial or contractual settlement purposes. Any unauthorized alteration, forgery or falsification of the content or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law.

Final : TO105027 Order: Project: Vallesu North; PON TO107241

This document is issued by the Company under its General Conditions of Service accessible at http://www.sgs.com/terms_and_conditions.htm. Attention is drawn to the limitation of liability, indemnification and jurisdiction issues defined therein.

WARNING: The sample(s) to which the findings recorded herein (the "Findings") relate was (were) drawn and / or provided by the Client or by a third party acting at the Client's direction. The Findings constitute no warranty of the sample's representativity of the goods and strictly relate to the sample(s). The Company accepts no liability with regard to the origin or source from which the sample(s) is/are said to be extracted. The findings report on the samples provided by the client and are not intended for commercial or contractual settlement purposes. Any unauthorized alteration, forgery or falsification of the content or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law.
